APPLICATION GUIDE 19

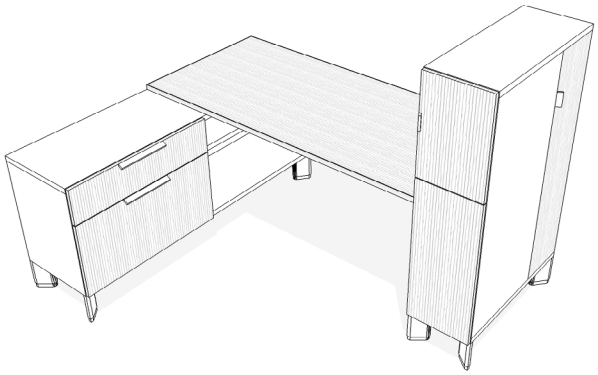

PRICE & PRODUCT GUIDE. 285

what is district

District responds to a new generation of architecture and employees, combining elements of classic furniture with the functionality of systems furniture. Two key features define District.

more out of small spaces

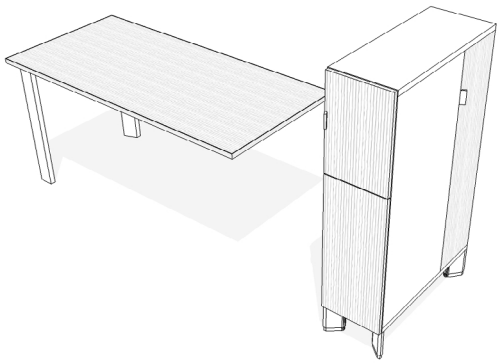

• As workstations become smaller, there is a need to maximize the use of every volume

layering

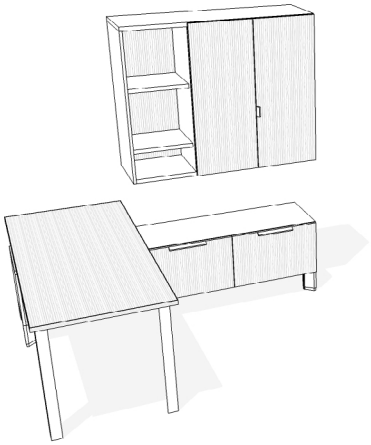

• Worksurfaces and credenzas overlap

• Shelves and lower cubbies allow for storage in otherwise unusable areas

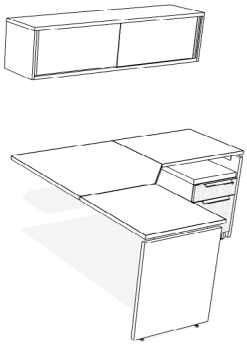

furniture pieces with multiple functions

• Towers and lockers are used for support of worksurface, binder storage, waste sorting, coat storage, and space division

District

Conventional System Layout

re-appropriation of surfaces and volumes

• Equal or greater capacity and performance can be achieved with less conventional layouts

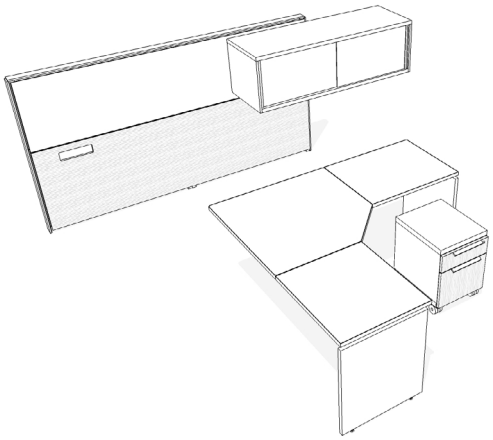

• Emphasis on increasing the primary worksurfaces and decreasing the secondary worksurface depth

• Flat screen monitors and laptops reduce the need for corner worksurface

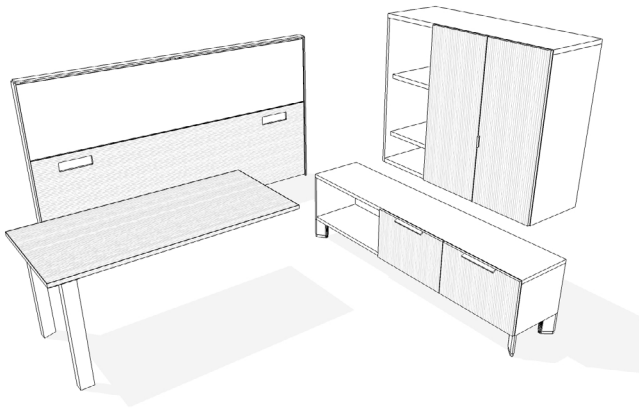

what is district (continued)

furniture look & feel

• Users are moving to workspaces that have a more furniture like feel, but still require adequate storage and power capacity

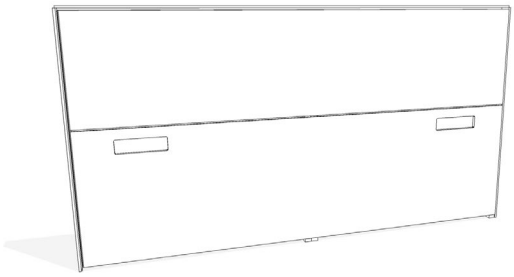

conventional system components

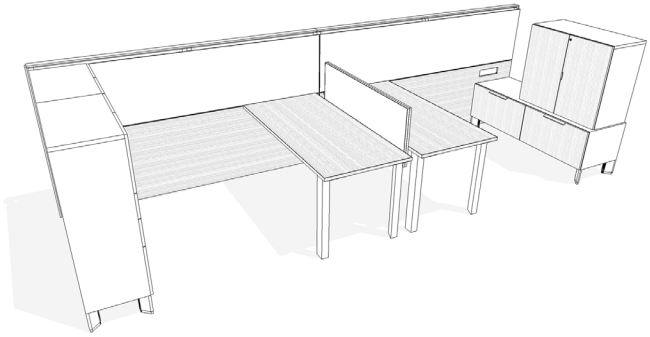

district furniture pieces

• Individual freestanding or semi-supported pieces of furniture rather than components add to this look

district focuses less on panels for space division

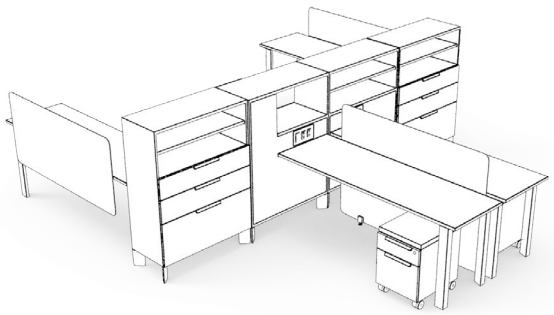

• Panel walls are typically not used to enclose entire stations, but are used as a conduit for technology

• Storage is utilized in place of panel walls optimizing planning possibilities and price competitiveness

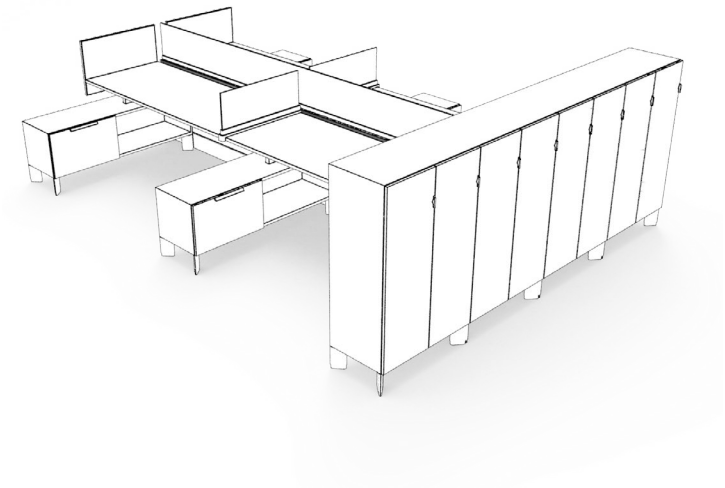

district workstation typicals

The following examples demonstrate the versatility of District to create various workstations types, from storage based spine planning, bench planning, traditional systems planning and freestanding offices.

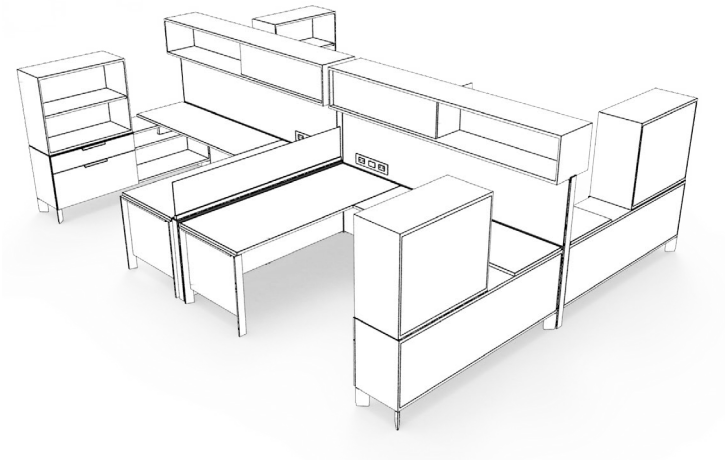

storage spine

- combo towers can provide space division and power/communications distribution without the use of panels
- cabinets can be placed in either direction, and have the option to be the full desired height or made up of stacked components for maximum flexibility
- cabinets are available with coat storage, filing and open cabinets for variable privacy
- power is available above or below desk level on some products
- accessories such as tackboards can be mounted to the backside of storage components
- District worksurfaces mount directly to the storage without the need for legs, to create a clean aesthetic

shared address benching

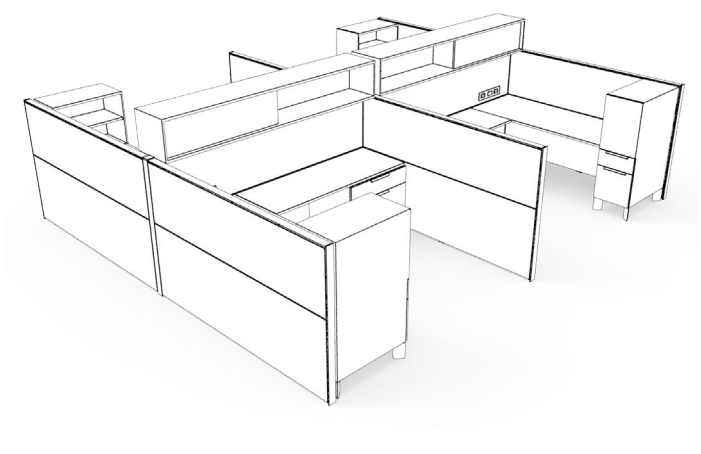

- desk height panels provide power/communication distribution below desk height level to provide a clean aesthetic
- glass screens between worksurfaces and desk edge screens provide territorial privacy
- workstations can be shared by a number of users, so lockers can provide individual storage
- seat cushions can provide temporary seating for guests

collaborative open plan

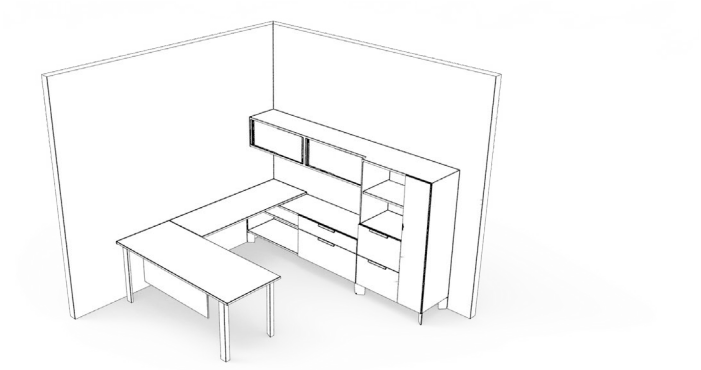

- space division is provided by a combination of 42" high panels and storage
- 42" high panels enhance the functionality of the workstation by providing above worksurface power and accessory rails
- narrow depth return worksurfaces and storage add to the spaciousness of small workstations
- storage formats are available for closed and open storage combinations, and are available with wood, laminate and glass options

district workstation typicals (continued)

conventional workstation

- District can be planned in a more traditional way where panels provide the space division
- fascias are available in solid, wood, metal and fabric finishes to provide varying aesthetics
- storage is available with various foot details, or to the floor for a more traditional appearance
- panels range from 29" high to 66" high depending on the amount of privacy required

freestanding private office

- private offices can be created using combinations of District worksurfaces and storage
- overhead storage can mount to drywall and Altos
- additional seating requirements can be accommodated with the District seat cushion on credenzas
- the aesthetic of District is maintained with the use of layered worksurfaces and storage, and the use of the semi-suspended end gable, Desk Shelf and the distinct District handle on storage return worksurfaces and storage add to the spaciousness of small workstations
- storage formats are available for closed and open storage combinations, and are available with wood, laminate and glass options

introduction

xpress program

what is xpress

Teknion's Xpress Program is designed to offer expedited shipment to a large base of teknion customers needing delivery in an abbreviated time frame. Products that are available through *Teknion's Xpress Program* will include this Xpress .

order information

Orders received before 12:00 pm eastern standard/eastern daylight savings time will be processed on that same day. Orders received after 12:00 pm eastern standard/eastern daylight savings time will be processed on the next business day.

Teknion's Xpress Program is not intended to replace our standard product lead time. For this reason, the following guidelines are in effect:

1. Quantities may be limited on individual items based on product availability.

5-day Program*	Expansion Learning	Maximum $50,000 list
	Expansion Casegoods, Expansion Desking	Maximum $75,000 list
	Seating (non-wood)	Maximum 50 chairs
	Complements (excludes Height-Adjustable Tables)	Maximum 25 all items
10-day Program*	Leverage	Maximum $200,000 list
	District	Maximum $200,000 list
	District Storage	Maximum $200,000 list
	Filing & Storage (excludes wood fronts, cushions and special paint)	Maximum 50 units
	Altos	Maximum $75,000 list
	Tek Vue	Maximum $150,000 list
	Seating (Wood)	Maximum 25 chairs

* Refer to the weekly Teknion Lead Time Sheet published on My Teknion for the relevant lead times. Delivery follows standard shipping schedules that may affect departure dates.

2. Orders can only be accepted in the fabrics, finishes and sizes outlined in Teknion's price list (special variations cannot be accepted).
3. Orders must be submitted via the Order Submission application on OnePlace.

changes and cancellations

No changes or cancellations are accepted on Xpress orders.

terms and conditions

All other terms and conditions of sale are available online at www.teknion.com.

Not all products are available through *Teknion's Xpress Program*. Refer to the specification software for complete product offering.

understanding application guide pages

This application guide will include the following types of pages.

application guides

understanding panel walls

District Panels are available in three Panel Styles: Standard Panel Wall, Panel Wall with Inset Glass and Panel Wall with Accessory Beam. Each Panel Style is available in three Panel Profiles: Flush, Elevated and Convertible.

panel profiles

– **Flush**, which provides privacy to the floor

– **Elevated**, which provides a 6" high open space at the bottom of the panel to allow air flow and a lighted aesthetic

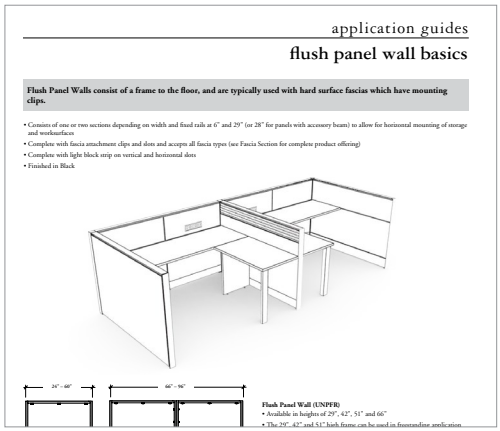

– **Convertible**, which provides a economical alternative to the Flush and Elevated Panel and allows the flexibility to convert from a Flush Panel Profile to an Elevated Panel Profile using the same frame

Standard Panel Wall (UNPFR, UNPER and UNPC)
All panel profiles accept the Panel Wall Add-On Screen – Glass (UNSPG) and Panel Wall Add-On Screen – Solid (UNSPS).

Flush and Conventional panel profiles can accept the Support Foot for Freestanding District (UAFFN) for freestanding applications. Elevated Panels **cannot** accept a freestanding foot.

understanding pages

Used to describe the intent and common features of a group of products.

application guides

flush panel wall basics

Flush Panel Walls consist of a frame to the floor, and are typically used with hard surface fascias which have mounting clips.

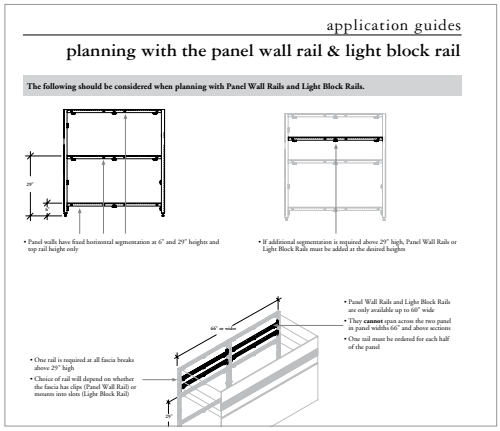

• Consists of one or two sections depending on width and fixed rails at 6" and 29" (or 28" for panels with accessory beam) to allow for horizontal mounting of storage and worksurfaces
• Complete with fascia attachment clips and slots and accepts all fascia types (see Fascia Section for complete product offering)
• Complete with light block strip on vertical and horizontal slots
• Finished in Black

24" – 60"
66" – 96"

Flush Panel Wall (UNPFR)
• Available in heights of 29", 42", 51" and 66"
• The 29", 42" and 51" high frame can be used in freestanding application

basics pages

application guides

planning with the panel wall rail & light block rail

The following should be considered when planning with Panel Wall Rails and Light Block Rails.

29"
6"

• Panel walls have fixed horizontal segmentation at 6" and 29" heights and top rail height only

• If additional segmentation is required above 29" high, Panel Wall Rails or Light Block Rails must be added at the desired heights

• One rail is required at all fascia breaks above 29" high
• Choice of rail will depend on whether the fascia has clips (Panel Wall Rail) or mounts into slots (Light Block Rail)

60" or wider

• Panel Wall Rails and Light Block Rails are only available up to 60" wide
• They **cannot** span across the two panel in panel widths 66" and above sections
• One rail must be ordered for each half of the panel

29"

planning pages

Used to outline the rules and restrictions that should be considered when planning with products.

understanding panel walls

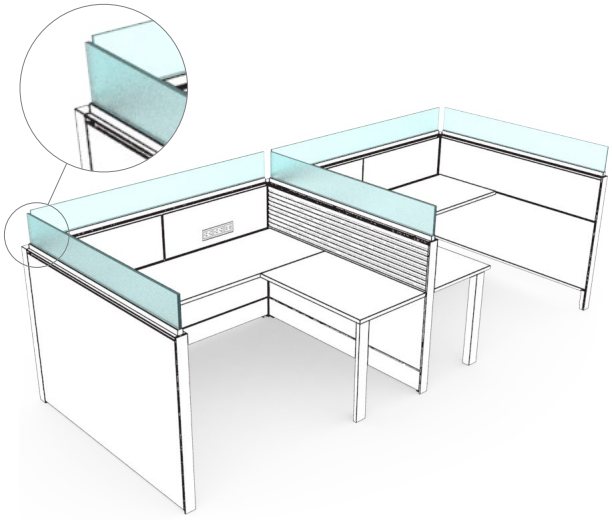

District Panels are available in three Panel Styles: Standard Panel Wall, Panel Wall with Inset Glass and Panel Wall with Accessory Beam. Each Panel Style is available in three Panel Profiles: Flush, Elevated and Convertible.

panel profiles

– **Flush**, which provides privacy to the floor

– **Elevated**, which provides a 6" high open space at the bottom of the panel to allow air flow and a lighted aesthetic

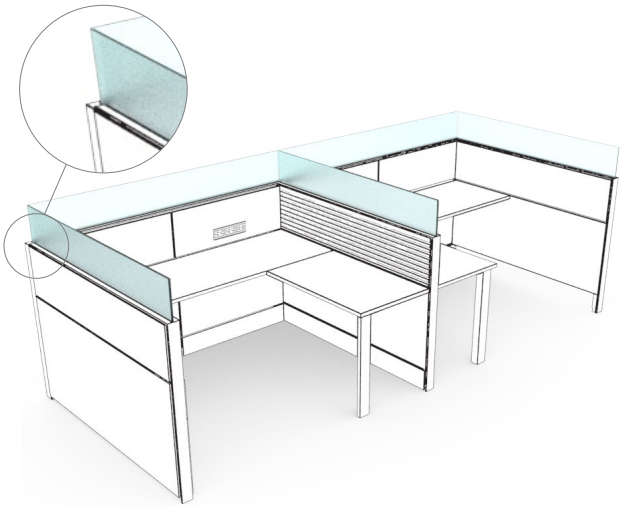

– **Convertible**, which provides a economical alternative to the Flush and Elevated Panel and allows the flexibility to convert from a Flush Panel Profile to an Elevated Panel Profile using the same frame

Standard Panel Wall (UNPFR, UNPER and UNPC)

All panel profiles accept the Panel Wall Add-On Screen – Glass (UNSPG) and Panel Wall Add-On Screen – Solid (UNSPS).

Flush and Conventional panel profiles can accept the Support Foot for Freestanding District (UAFFN) for freestanding applications. Elevated Panels **cannot** accept a freestanding foot.

Panel Wall with Inset (UYPFR, UYPER and UYPCR)

All panel profiles accept the following blade options:
- Glass Blade (UYSPG/UYSPF)
- Bridged Glass Blade (UYSCG/UYSCF)
- Smooth Felt Blade(UYSPZ)
- Infinity Blade (UYXD)

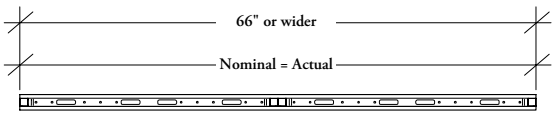

The blade is inset into the frame, so there is less exposed trim offering a more seamless appearance.

Flush and Conventional panel profiles can accept the Support Foot for Freestanding District (UAFFN) for freestanding applications. Elevated Panels **cannot** accept a freestanding foot.

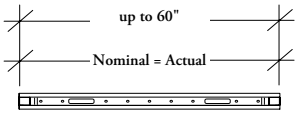

understanding panel walls (continued)

panel creep

District Panels have no creep factor, the nominal dimension and the actual dimension are the same.

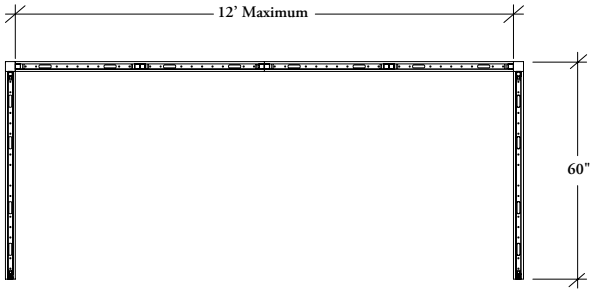

• Panels 66" or wider consist of two equally sized segments

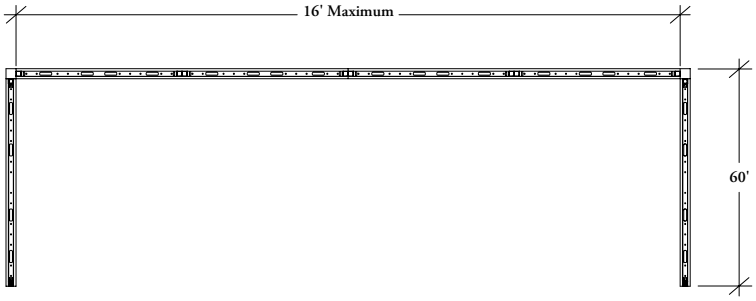

• Frame up to 60" consist of one segment only

panel runs

• On panel wall heights of 66" that do **not** support loads, the maximum run allowed is 12' - 0"

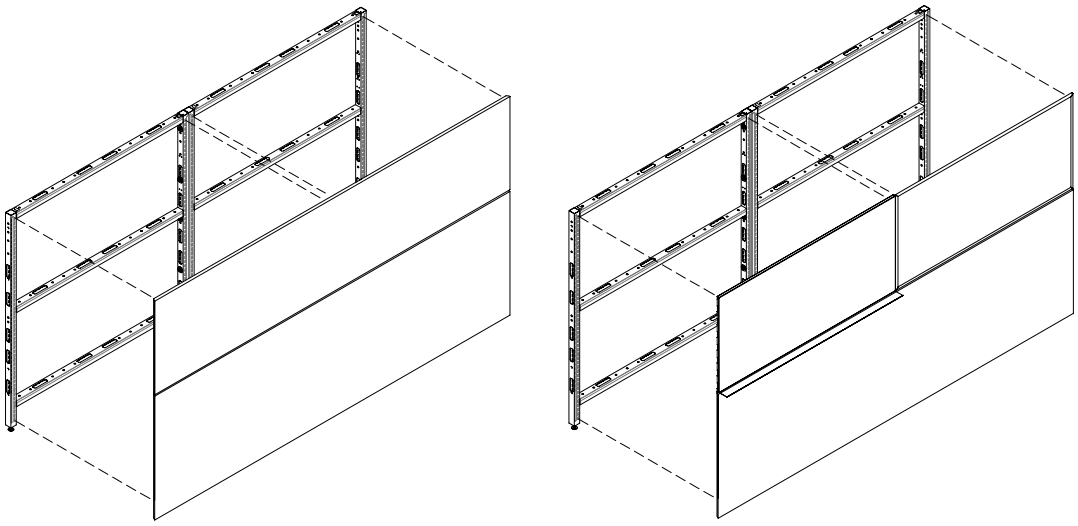

• 60" wide x 66" high wing panels must be used at both ends to provide adequate support

• On panel wall heights of 29", 42" and 51" that do **not** support loads, the maximum unsupported run allowed is 16' - 0"

• 60" wide wing panels the same height as the panel run, must be used at both ends to provide support

fascia spans

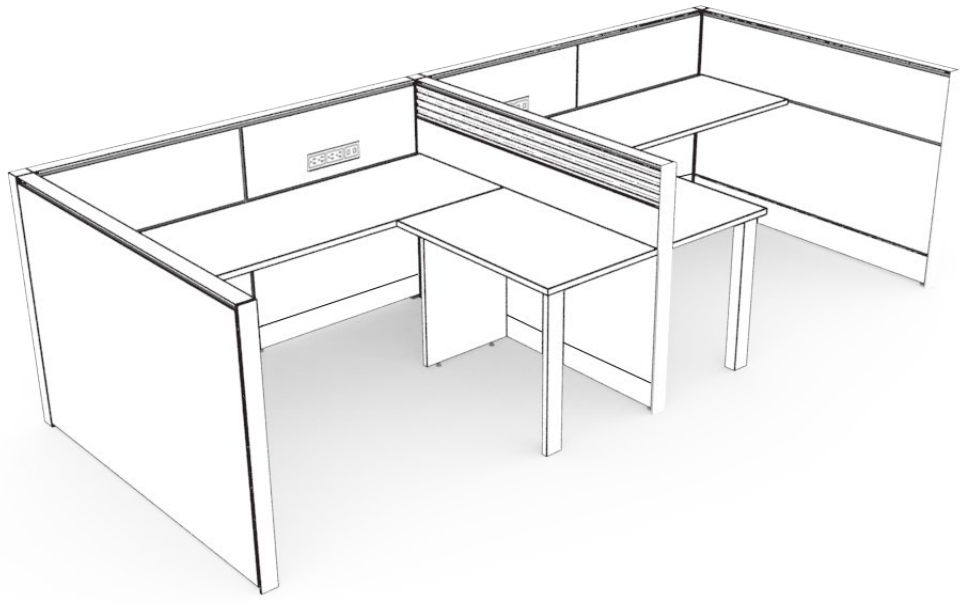

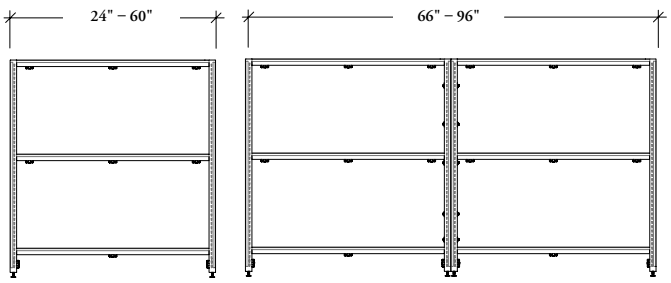

• Fascias can span across both sections of a frame 66" wide and wider to cover the entire width, or can be split so that each section can have a different fascia

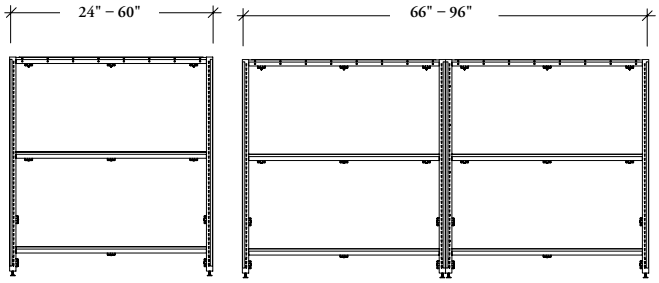

flush panel wall basics

Flush Panel Walls consist of a frame to the floor, and are typically used with hard surface fascias which have mounting clips.

- Consists of one or two sections depending on width and fixed rails at 6" and 29" (or 28" for panels with accessory beam) to allow for horizontal mounting of storage and worksurfaces
- Complete with fascia attachment clips and slots and accepts all fascia types (see Fascia Section for complete product offering)
- Complete with light block strip on vertical and horizontal slots
- Finished in Black

Flush Panel Wall (UNPFR)

- Available in heights of 29", 42", 51" and 66"
- The 29", 42" and 51" high frame can be used in freestanding application
- Can accept Panel Wall Add-On Screen – Solid (UNSPS) and Panel Wall Add-On Screen – Glass (UNSPG)
- Can be used with the following:
  - Glass Blade (UYSPG/UYSPF) with Panel Top Trim for Panels with Inset Glass for 6mm or 10mm (UYTT)
  - Bridged Glass Blade (UYSCG) with Bridged Top Trim for Panels with Inset Glass for 6mm or 10mm (UYCT)
  - Smooth Felt Blade (UYSPZ) with Panel Top Trim for Panels with Inset Smooth Felt (UZTT)
  - Infinity Blade (UYXD) with Panel Top Trim for Panels with Inset Glass for 6mm only (UYTT)

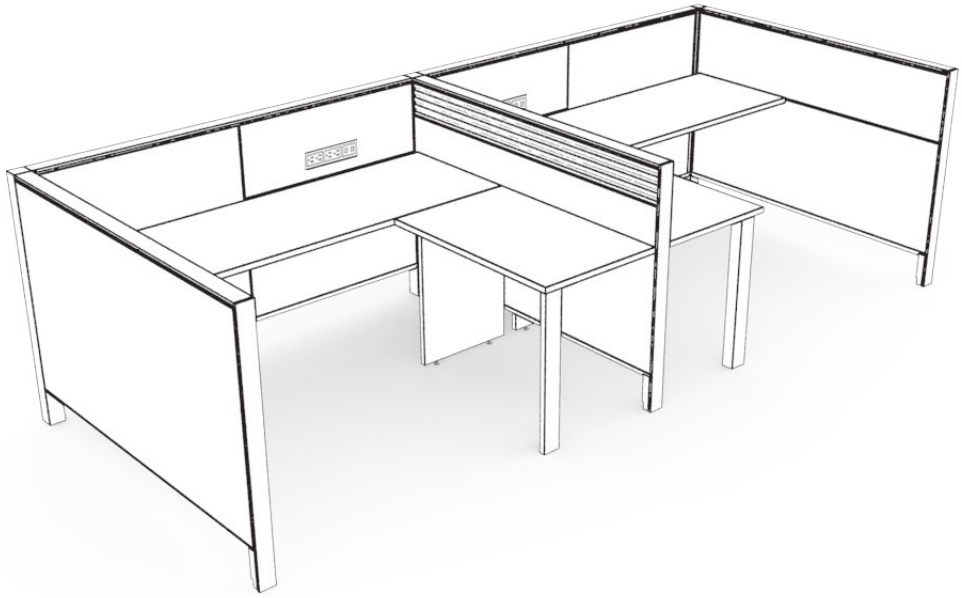

Flush Panel Wall with Inset (UYPFR)

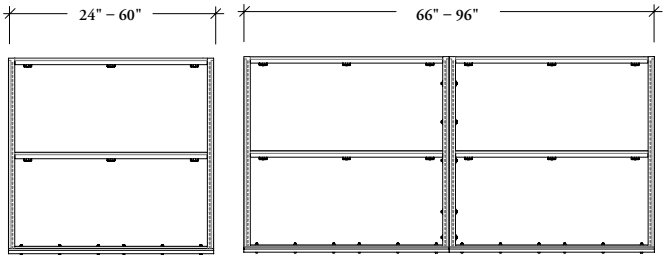

- Available 29", 42" and 51" high
- Can be used in freestanding applications
- Panel Walls with Inset do not allow access to the top horizontal rail of the panel, so careful attention must be paid when planning with horizontal mounting brackets. See the *Worksurface and Support* sections for details on mounting worksurfaces to 29" high Panel Walls with Inset
- When planning with District with Inset Panel, a return panel must be specified on both sides of a panel run when using center mounted overhead storage

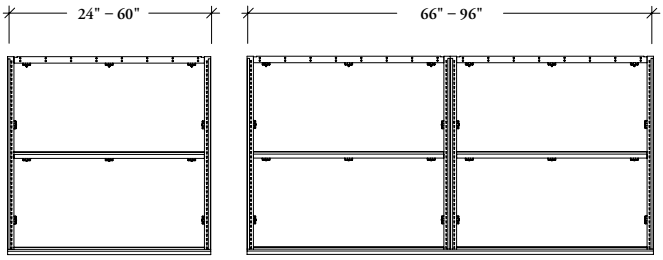

elevated panel wall basics

Elevated Panel Walls consist of a frame that allows for 6" of open space at the bottom. It is typically used with hard surface fascias which have mounting clips and for applications where the aesthetic and finish of the foot are considerations.

- Consists of one or two sections depending on width and fixed rails at 6" and 29" (or 28" for panels with accessory beam) to allow for horizontal mounting of storage and worksurfaces, but does **not** extend to the floor – the Elevated Panel Wall Foot (UNPEFR) (must be ordered separately) is attached below the panel frame to reach the desired datum height
- Complete with fascia attachment clips and slots and accepts all fascia types (see Fascia Section for complete product offering)
- Complete with light block strip on vertical and horizontal slots
- Base of the 6" rail is finished in Clear Anodized, Foundation or Mica paint finishes

Elevated Panel Wall (UNPER)

- Available in heights of 29", 42", 51" and 66"
- **Cannot** be used in freestanding applications
- Can accept Panel Wall Add-On Screen – Solid (UNSPS) and Panel Wall Add-On Screen – Glass (UNSPG)
- Can be used with the following:
  - Glass Blade (UYSPG/UYSPF) with Panel Top Trim for Panels with Inset Glass for 6mm or 10mm (UYTT)
  - Bridged Glass Blade (UYSCG) with Bridged Top Trim for Panels with Inset Glass for 6mm or 10mm (UYCT)
  - Smooth Felt Blade (UYSPZ) with Panel Top Trim for Panels with Inset Smooth Felt (UZTT)
  - Infinity Blade (UYXD) with Panel Top Trim for Panels with Inset Glass for 6mm only (UYTT)

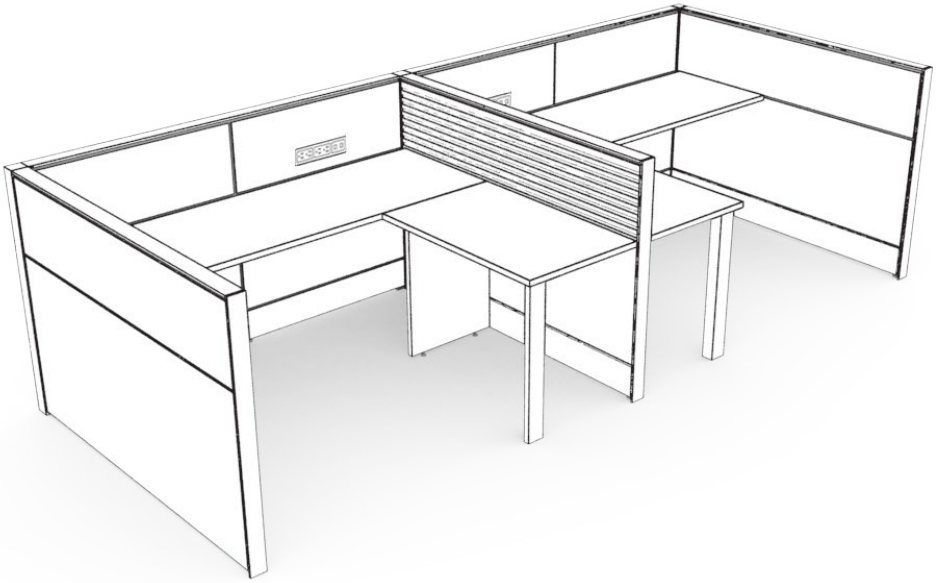

Elevated Panel Wall with Inset (UYPER)

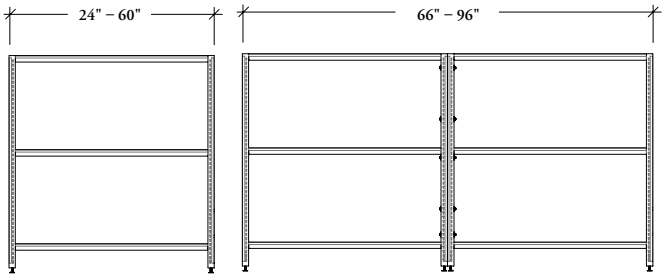

- Available 29", 42" and 51" high
- **Cannot** be used on freestanding applications
- Panel Walls with Inset do not allow access to the top horizontal rail of the panel, so careful attention must be paid when planning with horizontal mounting brackets. See the *Worksurface and Support* sections for details on mounting worksurfaces to 29" high Panel Walls with Inset
- When planning with District with Inset Panel, a return panel must be specified on both sides of a panel run when using center mounted overhead storage

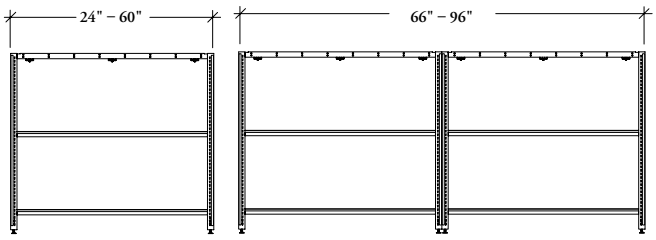

convertible panel wall basics

Convertible Panel Walls consist of a frame to the floor and provides an economical and flexible alternative to the Flush and Elevated panel frame. It can be used in a flush or elevated profile and is typically used for applications where the majority of the fascias do not have clips and are slot-mounted.

- Consists of one or two sections depending on width and fixed rails at 6" and 29" (or 28" for panels with accessory beam) to allow for horizontal mounting of storage and worksurfaces
- Does **not** have fascia attachment clips, is complete with slots only
- There are two rows of slots side-by-side will accept both fascias and storage or supports in the same location
- Accepts all fascia types but for Fascias that are complete with fascia clips, a separate mounting clip kit is required for mounting the fascias to the frame
- When used in a Flush application fascias are mounted onto the frame to the floor, and when used in an Elevated application the fascia mounts onto the frame to the 6" rail and an additional Convertible Panel Wall Base and Foot Trims (UNPCF) are added to provide a base trim and foot cover on the frame below the 6" level
- Finished in Black

Convertible Panel Wall (UNPC)

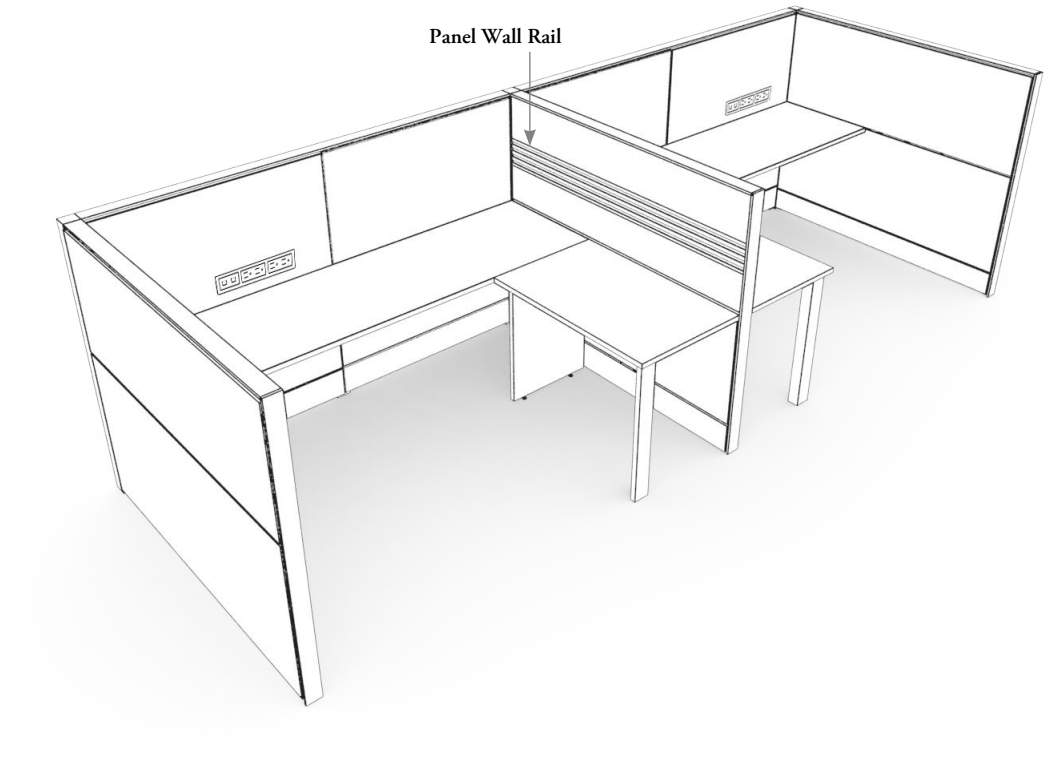

- Available in heights of 29", 42", 51" and 66"
- The 29", 42" and 51" high can be used in freestanding applications
- Can accept Panel Wall Add-On Screen – Solid (UNSPS) and Panel Wall Add-On Screen – Glass (UNSPG)
- Can be used with the following:
  - Glass Blade (UYSPG/UYSPF) with Panel Top Trim for Panels with Inset Glass for 6mm or 10mm (UYTT)
  - Bridged Glass Blade (UYSCG) with Bridged Top Trim for Panels with Inset Glass for 6mm or 10mm (UYCT)
  - Smooth Felt Blade (UYSPZ) with Panel Top Trim for Panels with Inset Smooth Felt (UZTT)
  - Infinity Blade (UYXD) with Panel Top Trim for Panels with Inset Glass for 6mm only (UYTT)

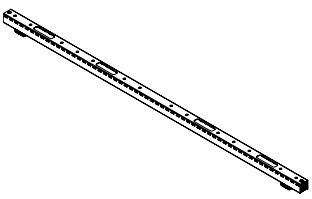

Convertible Panel Wall with Inset (UYPCR)

- Available 29", 42" and 51" high
- Can be used in freestanding applications
- Panel Walls with Inset do not allow access to the top horizontal rail of the panel, so careful attention must be paid when planning with horizontal mounting brackets. See the *Worksurface and Support* sections for details on mounting worksurfaces to 29" high Panel Walls with Inset
- When planning with District with Inset Panel, a return panel must be specified on both sides of a panel run when using center mounted overhead storage

panel wall base basics

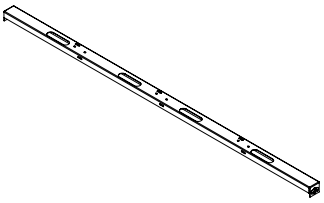

Panel Wall Rails and Light Block Rails are used to create additional segmentation on panels above the 29" high rail.

Panel Wall Rail (UNPHN)

- Complete with clips so can be used on all panels when Fascias with clips are specified

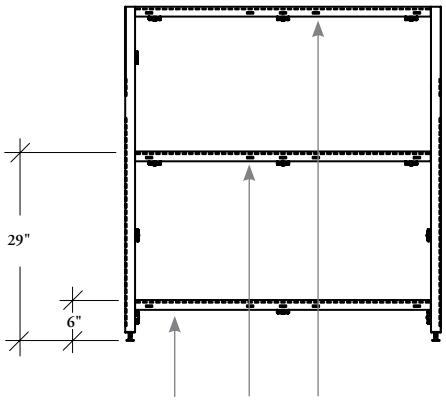

Light Block Rail (UNEX)

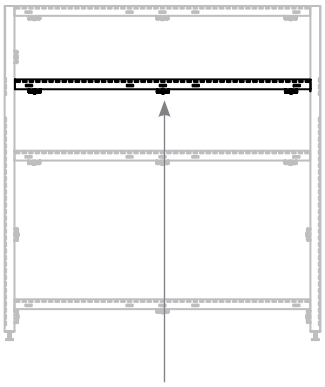

- Does not include clips so can be used on all panel types when fascias with no clips are specified

planning with panel wall rail & light block rail

The following should be considered when planning with Panel Wall Rails and Light Block Rails.

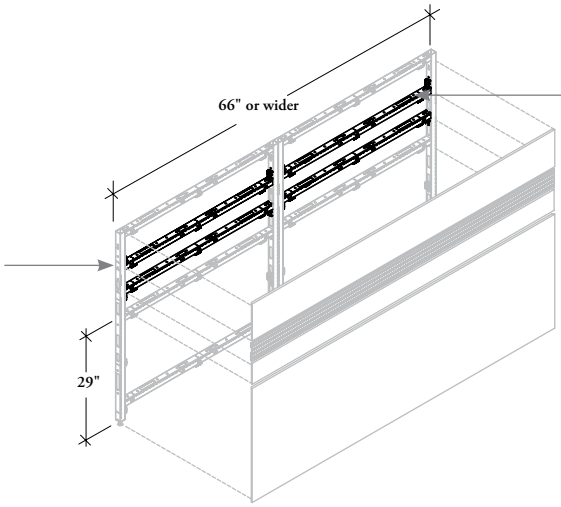

- Panel walls have fixed horizontal segmentation at 6" and 29" heights and top rail height only

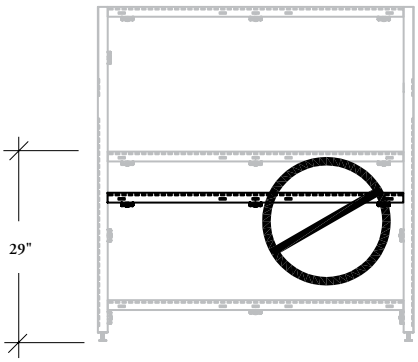

- If additional segmentation is required above 29" high, Panel Wall Rails or Light Block Rails must be added at the desired heights

- One rail is required at all fascia breaks above 29" high
- Choice of rail will depend on whether the fascia has clips (Panel Wall Rail) or mounts into slots (Light Block Rail)

- Panel Wall Rails and Light Block Rails are only available up to 60" wide
- They **cannot** span across the two panel in panel widths 66" and above sections
- One rail must be ordered for each half of the panel

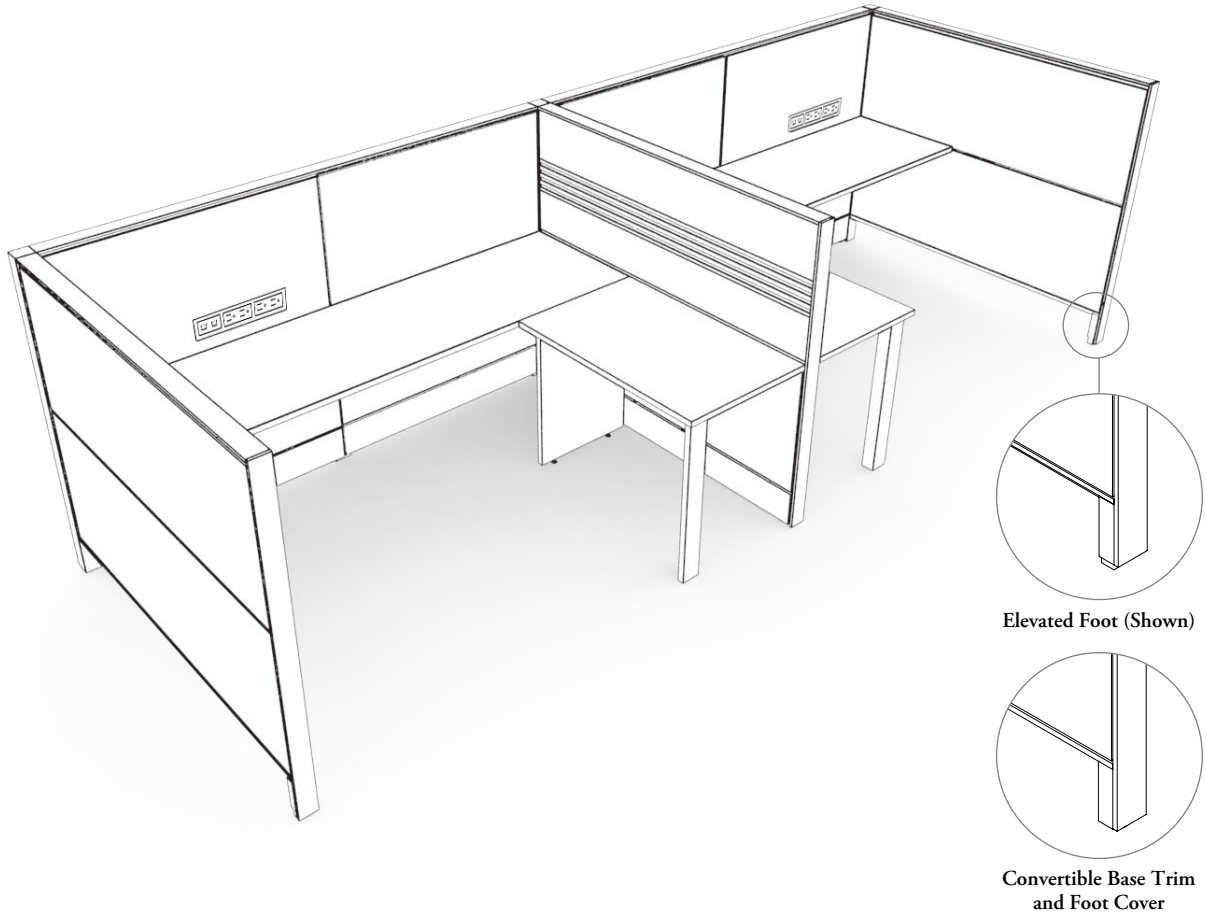

In this example, the 6" and 29" high rail and top of panel are fixed, so four additional rails are required.

- Panel Walls **cannot** be segmented between the 6" high rail and 29" high rail
- There are no mounting locations in the frame Panel Wall Rails or Light Block Rails

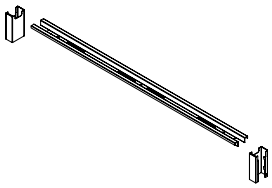

support foot basics

Panel Wall Bases and Panel Wall Feet are used for elevated panel wall applications.

Elevated Foot (Shown)

Convertible Base Trim and Foot Cover

Elevated Panel Wall Foot (UNPEFR)

- Used with the Elevated Panel Wall (UNPER) and Elevated Panel Wall with Inset (UYPER)
- Mounted to the base of the panel frame to elevate the frame 6" above the floor
- Used at all ends and shared between two panels at 180˚ angles, but are **not** required at corners or 180˚ spacers because the connector provides the necessary panel support
- Available in Clear Anodized, Foundation and Mica paint finishes

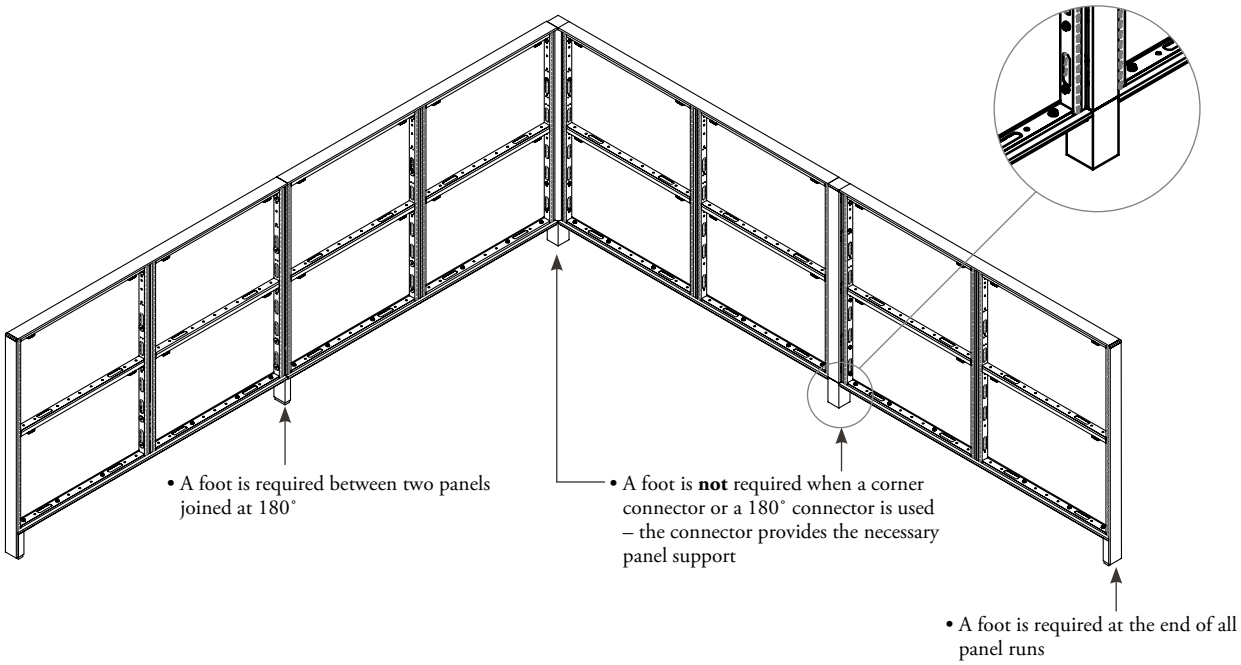

Convertible Panel Wall Base and Foot Trim (UNPCF)

- Used with the Convertible Panel Wall (UNPC) only in an elevated application
- Consists of a metal trim that is attached to the bottom rail of the panel and elevated feet that snap onto the frame post
- One Convertible Panel Wall Base and Foot Trim is required for all elevated panels 60" and less. Two are required for elevated panels 66" and wider as they are made up of two frames (specified as one unit at the overall length)
- Available in Foundation and Mica paint finishes

planning with panel wall base & foot

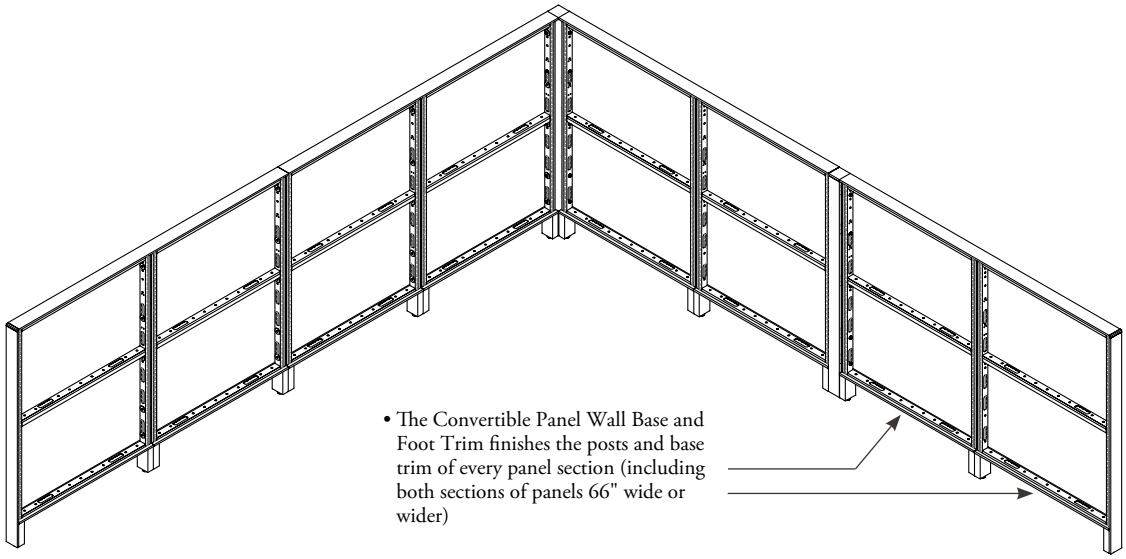

The following should be considered when planning with Panel Wall Bases and Feet.

elevated panel wall foot

- The Panel Wall Foot is used only on the Elevated Panel Wall
- Provides a clean aesthetic at the base of the panel because it is required only at the ends of panel runs and shared between two panels in a straight run
- Offers a Clear Anodized finish option

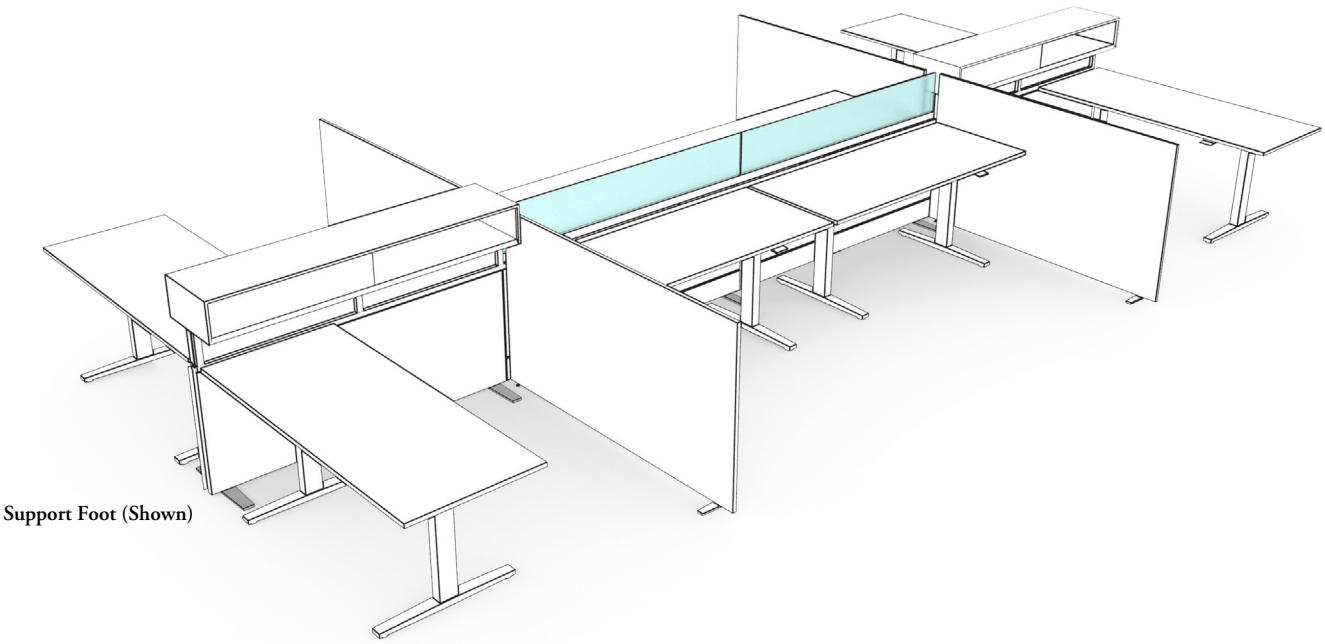

convertible panel wall base and foot trim

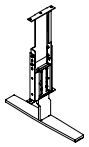

- The Convertible Panel Wall Base and Trim is used only on the Convertible Panel Wall in Elevated applications
- Available only in painted finishes
- Lengths 60" wider and under include two feet covers and one base trim
- Lengths 66" wide and wider include four feet covers and two base trims

support foot for freestanding district basics

The Support Foot is used to create Freestanding District Panel runs.

Support Foot (Shown)

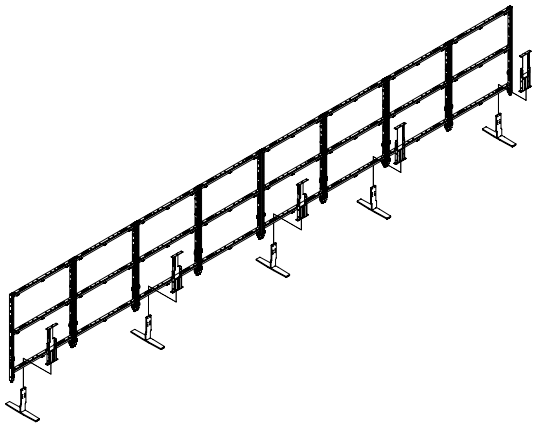

Support Foot for Freestanding District (UAFFN)

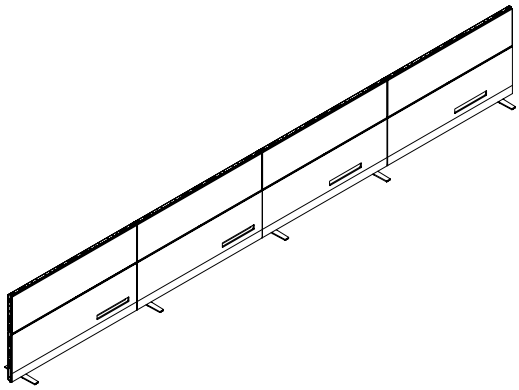

- Installed at the bottom of panels to create freestanding applications
- **Cannot** be used with an Elevated panel
- The Support Foot can be used in any of the four existing hole locations on the bottom of Flush or Convertible panels
- On Panel widths from 24" - 48" there are two cut out locations, 54" - 96" have four cut out locations
- There must be a foot at both start and ends of a panel run
- The Support Foot takes up approximately 1/2" in height therefore a specific fascia is required below 29" high (the height is nominal, therefore 28" fascia will actually be approximately 27-1/2" to allow for the foot)
- The distance between panel support feet **cannot** exceed 96"
- A unique end trim is required, End Trim for Freestanding District (UATE) to accommodate the height change created by the foot
- Freestanding District can be specified up to 51" total in height (this can be either a 51" high panel or a 29" or 42" high panel with storage or screens to 51" high)
- The top area of the foot offers cable pass through capability available with levelers
- Available with levelers
- Recommend additional support feet if panel mounted storage usage is high

planning with freestanding panels

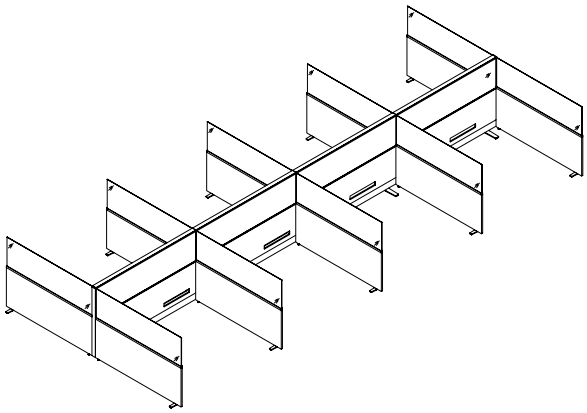

The following outlines the steps for planning with Freestanding District Panels.

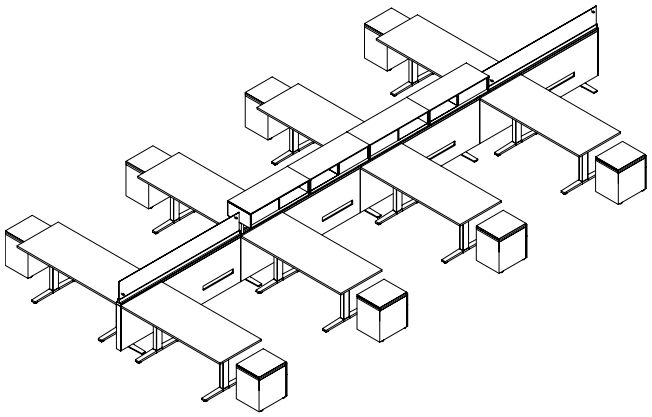

Specify the Support Foot as needed. Support foot must be specified at the beginning and at the end of each run as well as every 8' in between. Support feet **cannot** be placed in the same location that power is used, so careful attention to the planning of power is required. See fascia section for available power cut out locations.

Specify the fascias required. In this example the power is in the right location, but at the end of the run, the power is located center right to avoid interference with support foot.

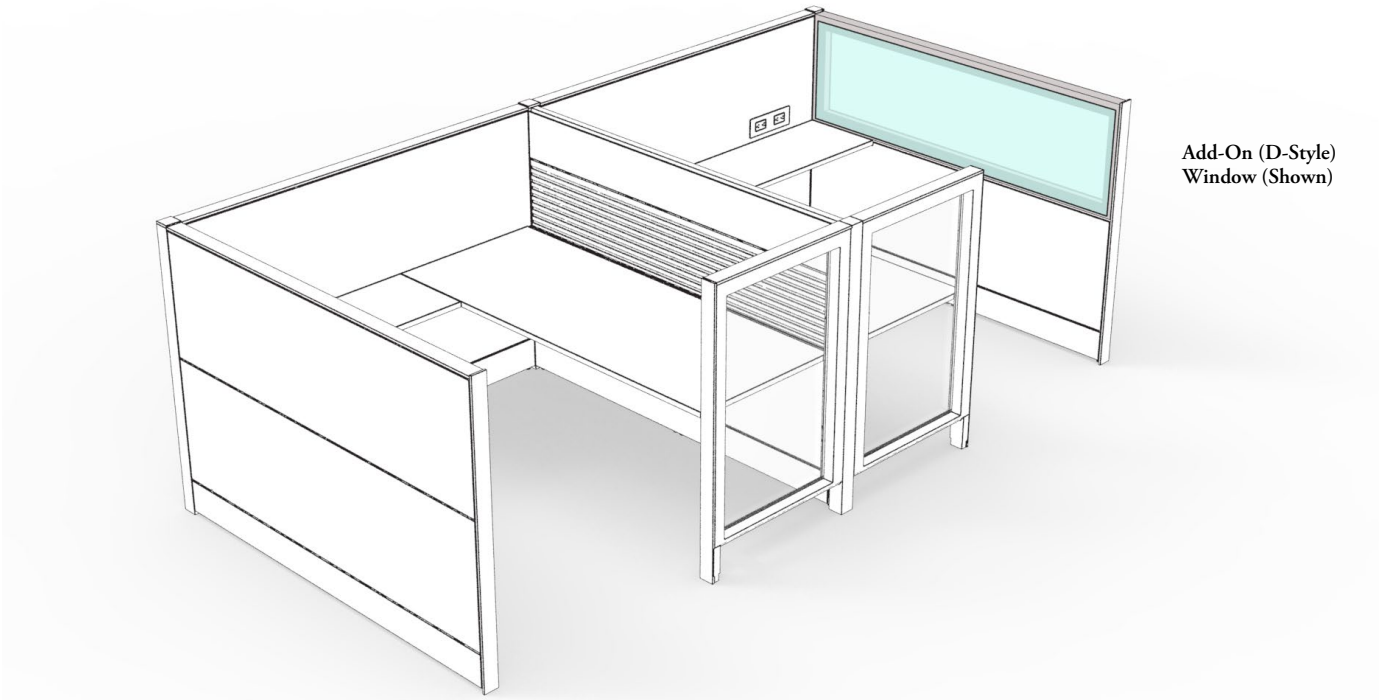

When planned at 29" high with accessory rail, a variety of storage options can be added either freestanding and mobile or mounted onto the accessory beam.

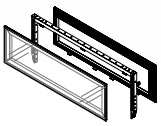

Recommend additional support feet if panel mounted storage usage is high.

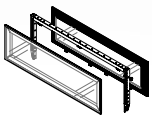

add-on window basics

Add-On Windows mount to the top of a panel wall frame to provide an uninterrupted glass finish.

Add-On (D-Style) Window (Shown)

Add-On Window (D-Style) – Single Glass (UNPWSR) and Add-On Window (D-Style) – Double Glass (UNPWDR)

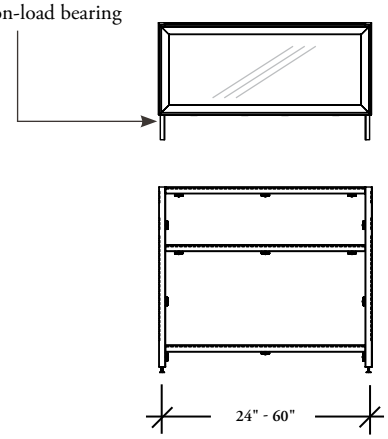

- Mount on-module or semi off-module to the top of a panel wall frame up to a height of 66"
- Frame is continuous on all sides to provide a refined aesthetic
- Are **not** load bearing, and **cannot** be mounted above another add-on window
- Do **not** affect existing cable routing within the panel wall frame
- Available in Standard Glass Clear and Frost, and Specialty Glass Vanceva
- Standard Glass, Clear is a tempered glass; Standard Glass, Frost is a sandblasted tempered glass; Specialty Glass Vanceva is a laminated glass – Clear tempered glass will be applied to the opposite side of the double glass window when Frost or Vanceva glass have been specified
- Frames are available in Clear Anodized, Espresso and Storm White paint finishes
- Top trims must be specified separately
- Not available on UY_ Panels

planning with add-on windows

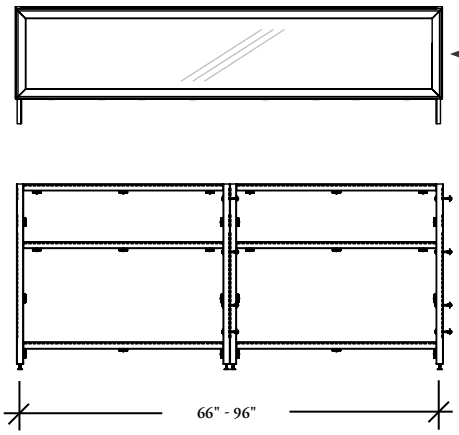

The following should be taken into consideration when planning with Add-On Windows.

stackability

- Only one window can be stacked onto a Panel Wall to a maximum height of 66"
- The Add-On is non-load bearing

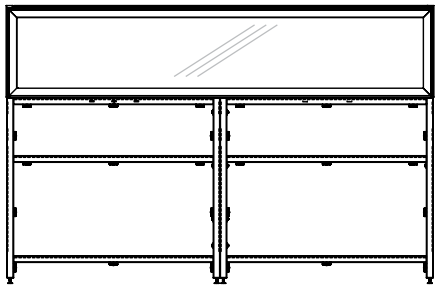

- When the panel frame is wider than 60" and made up of two sections, the Add-On spans across both frame sections

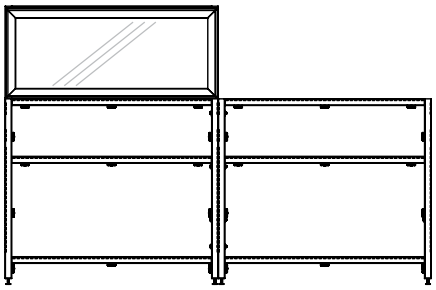

off-modularity

- The Add-On Window can be mounted fully on-module or semi off-module

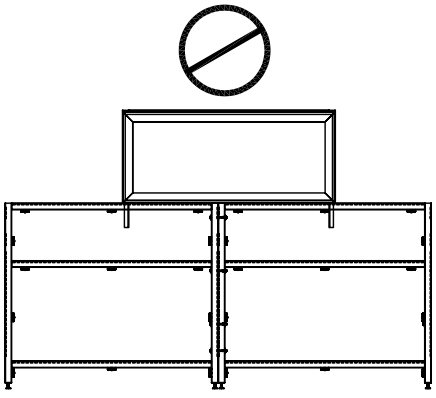

Fully On-Module

- The add-on window spans the entire panel wall regardless of whether the panel is a single frame section or made up of two frame sections

Semi Off-Module

- The Add-On Window is mounted on a panel wall that is over 60" wide therefore, made up of two sections
- The Add-On must be half the width of the overall panel to meet the connection of the two sections

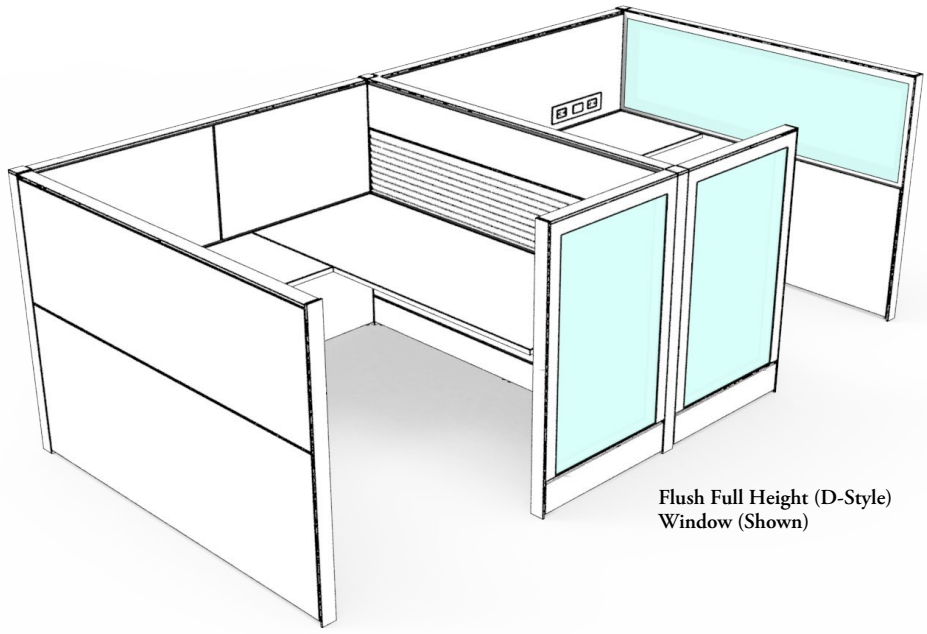

Fully Off-Module

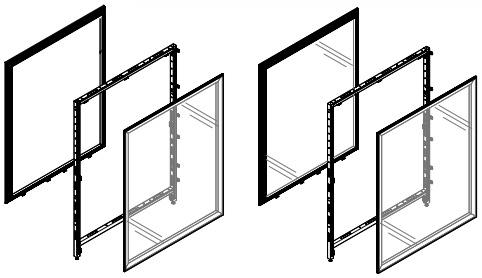

The add-on window **cannot** be specified fully off-module.

full-height window basics

Full-Height Windows are used in place of a panel wall to provide a full-height glass alternative.

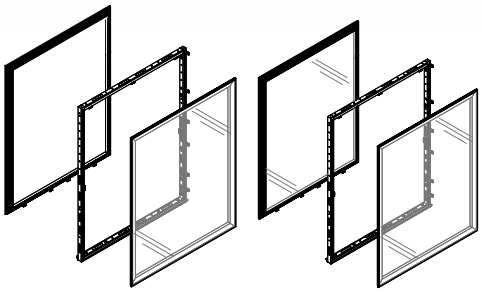

Flush Full Height (D-Style) Window (Shown)

Flush Full-Height Window (D-Style) – Single Glass (UNPFWSR) and Flush Full-Height Window (D-Style) – Double Glass (UNPFWDR)

- Used in place of a Flush Panel Wall (UNPFR) and Flush Panel with Inset (UYPFR)
- Available in widths up to 60" for panel heights up to 51" and widths up to 48" for panel heights up to 66"
- Available in Standard Glass Clear and Frost, and Specialty Glass Vanceva
- Standard Glass, Clear is a tempered glass; Standard Glass, Frost is a sandblasted tempered glass; Specialty Glass Vanceva is a laminated glass – Clear tempered glass will be applied to the opposite side of the double glass window when Frost or Vanceva glass have been specified
- Frames are available in Clear Anodized, Espresso and Storm White paint finishes
- Top trims and 6" Base Fascia must be specified separately

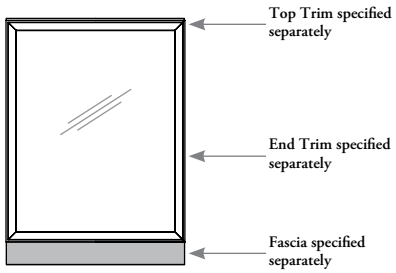

Elevated Full-Height (D-Style) Window – Single Glass (UNPEWSR) and Elevated Full-Height (D-Style) Window – Double Glass (UNPEWDR)

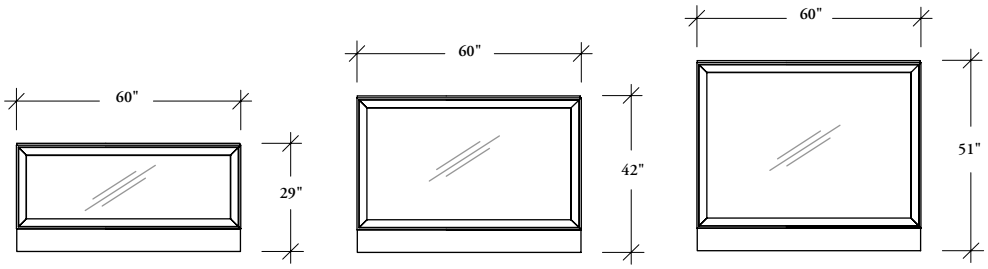

- Used in place of an Elevated Panel Wall (UNPER) and Elevated Panel Wall with Inset (UYPER)
- Available in widths up to 60" for panel heights up to 51" and widths up to 48" for panel heights up to 66"
- Available in Standard Glass Clear and Frost, and Specialty Glass Vanceva
- Standard Glass, Clear is a tempered glass; Standard Glass, Frost is a sandblasted tempered glass; Specialty Glass Vanceva is a laminated glass – Clear tempered glass will be applied to the opposite side of the double glass window when Frost or Vanceva glass have been specified
- Frames are available in Clear Anodized, Espresso and Storm White paint finishes
- Top trims must be specified separately

planning with full-height glass panels

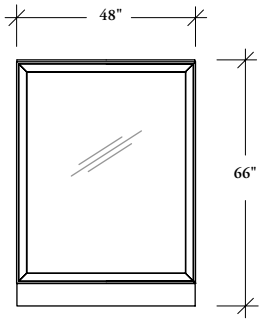

The following should be considered when planning with full-height glass panels.

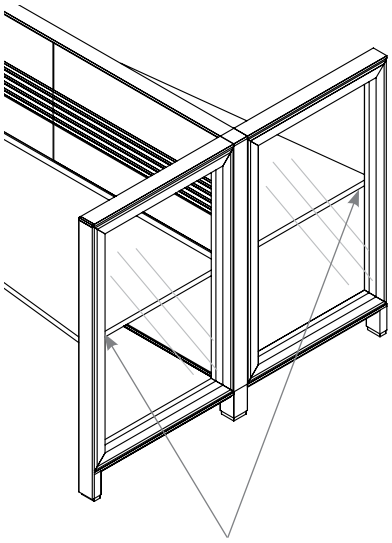

- Consists of the glass and frame only; top trims and end trims must be specified separately
- When the Flush Full Height Window is specified, a fascia must be specified to finish the base below the 6" rail

29", 42" and 51" heights are available in widths from 24" - 60"

66" height is only available in widths from 24" - 48"

- Full-height glass panels can support worksurfaces when the depth of the worksurface and the width of the panels are the same – see the *Supports* section for proper supports

fascias

PLANNING WITH POWER COMMUNICATIONS FASCIAS ON NON FREESTANDING PANELS 57

PLANNING WITH POWER COMMUNICATIONS FASCIAS ON FREESTANDING PANELS 60

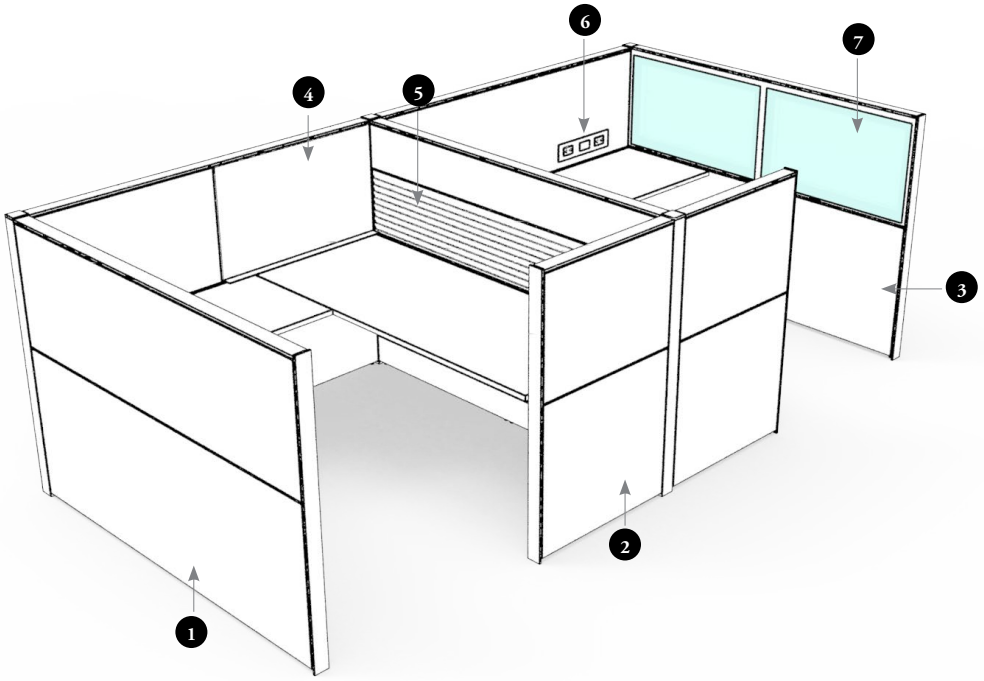

understanding fascias

District Fascias mount to a panel wall frame to provide functionality and aesthetic options to the panel and are available for standard and freestanding applications.

Fascias are available for two applications

- UN_applications - used on
  - – Standard panel walls
  - – Standard panel walls with accessory rails
- UA_applications - used on
  - – Panel walls with freestanding feet (at the bottom level)
  - – Panel walls with freestanding feet and accessory rails (at the top level)
- When specifying fascias on panels wall frames the total height of the fascias will be 1" less than the actual panel frame height, to allow for leveling (ex. a 29"h. panel wall frame uses a 28"h. fascia, or a 6" and 22"h. fascia combination)

UN_applications

The following outlines the types of UN__ fascias available

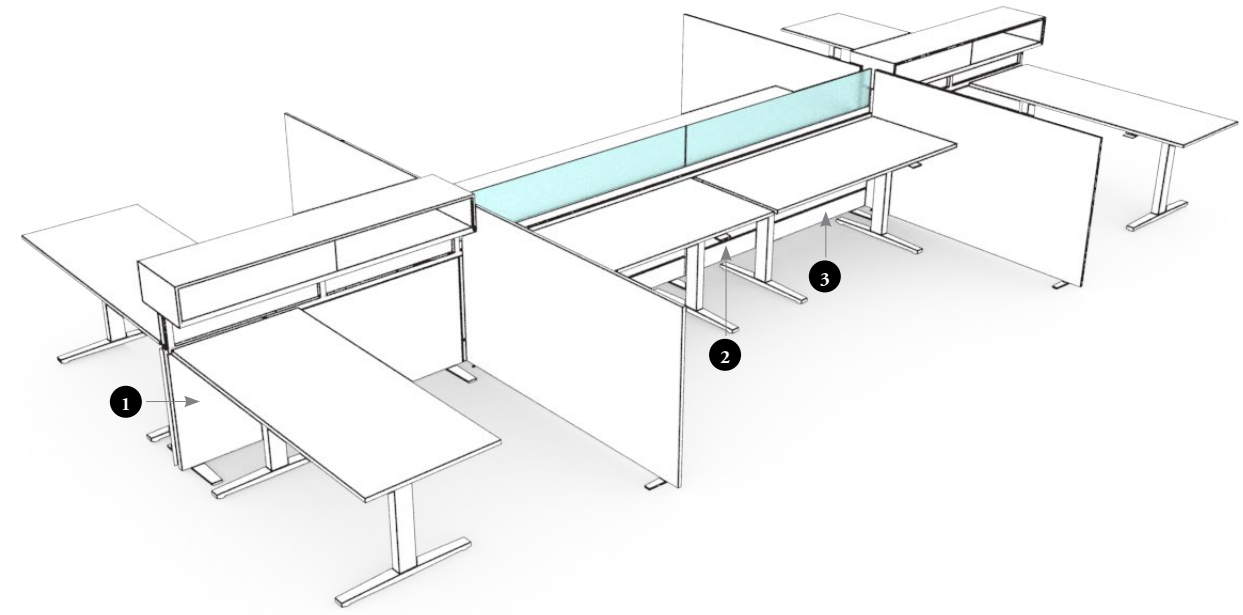

1. Solid Fascias
   -Provide a high aesthetic and a furniture look and feel to a workstation
   -Fascias can be segmented or monolithic
2. Stretch Solid Fascias
   -Span across connectors to provide an uninterrupted aesthetic
3. Fabric and Metal Fascias
   -Provide a cost effective alternative to solid fascias
4. Tackable and Whiteboard Fascias, available
   -Framed to provide an enhanced aesthetic
   -Unframed to provide a cost effective alternative
5. Accessory Fascias
   -Provide a rail to store personal items above the worksurface
6. Power and Communication Fascias
   -Provides access to power either above or below worksurface level
7. Window Fascias
   -Add lightness to a panel wall

understanding fascias for freestanding district

UA_ applications

UA__Fascias can be used in two locations:

- On the bottom level of a panel with freestanding feet
- Only the 6", 27" and 28"h. can be used at the bottom of a panel
- Fascia- heights are nominal, the actual size is 1/2" less to accommodate the freestanding foot
- At a level where electrical is required on a panel with freestanding feet, as the electrical locations are designed to avoid interference with the freestanding feet
- When specifying fascias on panels wall frames with accessory rails, the total height of the fascias will be 2" less than the actual panel frame, to allow for the thickness of the accessory rail and for leveling (ex. a 29"h. panel wall frame uses a 27"h. fascia, or a 6" and 21"h. fascia combination)

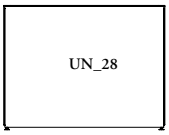

The following outlines the types of UA__ fascias available

1. Solid Fascias
   -Accommodates the freestanding foot
2. Fabric and Metal Fascias
   -Accommodates the freestanding foot
3. Power and Communication Fascias
   -Provides access to power below worksurface level
   -The cut out locations are different than the cut out locations on UN_ fascia to avoid interference with freestanding feet

understanding fascia types

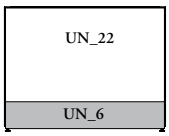

The following examples outline the fascia heights required for non freestanding and freestanding panel configurations.

standard

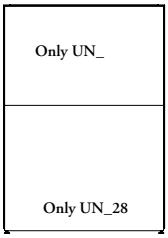

District Flush or Convertible Panel

- No Freestanding Feet, 29"h
- UN__28 fascia required

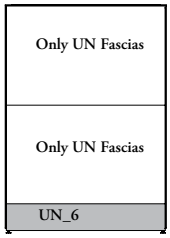

District Flush or Convertible Panel, No Freestanding Foot, 29"h.

- One UN__6 fascia required
- One UN_22 fascia required

District Flush or Convertible Panel, No Freestanding Foot

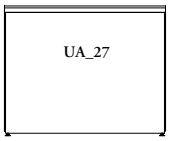

- UN__28 fascia required
- UN_ fascia required to top of panel

District Flush or Convertible Panel, No Freestanding Foot

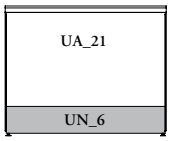

- UN__06 fascia required
- UN__22 fascia required
- UN__Fascia required to top of panel

standard with accessory rail

District Flush, No Freestanding Feet, 29"h

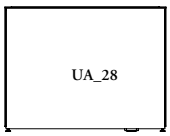

- UA__27 fascia required
- This allows for the 1" accessory rail at the top

District Flush, No Freestanding Foot, 29"h.

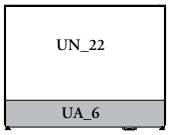

- One UN__6 fascia required
- One UA__21 fascia required

panel with freestanding feet

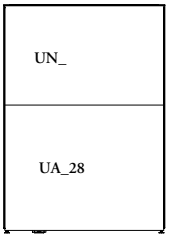

District Flush or Convertible Panel, with Freestanding Foot, 29"h

- UA__28 fascia required the panel

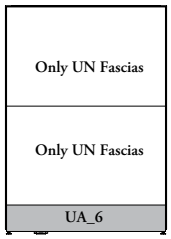

District Flush or Convertible Panel with Freestanding Foot, 29"h.

- One UA__6 fascia required
- One UN_22 fascia required

District Flush or Convertible Panel with Freestanding Foot

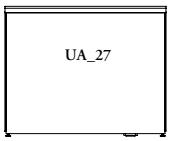

- UA__28 fascia required
- UN_ fascia required to top of panel

District Flush or Convertible Panel, With Freestanding Foot

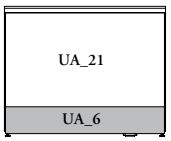

- UA__6 fascia required
- UN__22 fascia required
- UN_ Fascia required to top of panel

panel with freestanding feet and accessory rail

District Flush and Freestanding Foot, 29"h

- UA__27 fascia required
- This allows for the 1" accessory rail at the top

District Flush and Freestanding Foot, 29"h

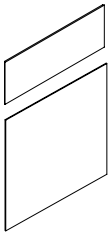

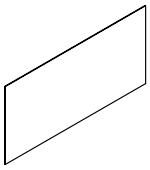

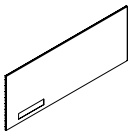

- UA__6 fascia required
- UA__21 fascia required
- This allows for the 1" accessory rail at the top

fascia basics

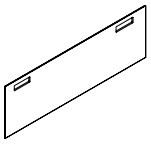

District fascias mount onto panel wall frames by either clip mounting or slot mounting. The following outlines the available options.

clip-mounted

- The following fascias types mount into Flush and Elevated Panel Wall Frames
- They are hard surface fascias that provide a District aesthetic and are considered "D-style" fascias
- All "D-style" fascias mount to the panel frames with clips
- If a "D-style" fascia is required on a Convertible Panel Wall, a Fascia Clip Kit (additional clips) must be ordered and installed on the panel

Product Name and Code	Illustration	Description
Solid Fascia (UNESD), Solid Full-Height Fascia (UNESF) and Stretch Solid Fascia (UNYSD)		A solid fascia that mounts into a panel wall frame. **Heights:** Solid Fascias 6", 7", 9", 13", 15", 22", 24", 26", 28", 30" and 37"h. **Solid Full Height Fascias** 35" and 41"h. -For monolithic applications on 42"h panel wall frames **Stretch Solid Fascia** 6", 22", 28", 35" and 41"h. **Widths:** 24" - 96" in 6" increments -Solid and Full Height Solid Fascia widths are actual dimensions -Stretch Solid Fascia widths are nominal dimensions, the actual width is 1-1/2" or 3" wider as they stretch either half way over a three-way connector on one or both sides **Finishes:** Laminate Flintwood Natural Veneer
Solid Fascia for Freestanding District (Clip Mounted) (UAESD) and Stretch Fascia for Freestanding District (UAYSD)		A solid fascia that mounts into a panel wall frame with: Freestanding feet Accessory rail **Heights:** Solid Fascias and Stretch Fascias 6", 22", 28", 35" and 41"h. -Used in two locations 1) The base level of a panel wall frame with freestanding feet -Sizes are nominal, actual sizes are 1/2" less to accommodate a freestanding support foot 2) When a panel wall frame has an accessory rail **Widths:** 24" - 96" in 6" increments -Solid Fascia widths are actual dimensions -Stretch Solid Fascia widths are nominal dimensions, the actual width is 1-1/2" or 3" wider as they stretch either half way over a three-way connector on one or both sides **Finishes:** Laminate Flintwood Natural Veneer
Solid Power/ Communications Fascia (UNECL) (shown) and Solid International Power/Communications Fascia (UNEIL)		A solid fascia with electrical and communication cut outs that mounts into a panel wall frame. -The cut out configurations and orientations available depend on size **Heights:** 7", 13", 22", 26", 28", 35", 37" and 41"h. -Available for above and below worksurface mounting **Widths:** 24" - 96" in 6" increments Outlet Configurations: **UNECL** 2 =one duplex outlet plus VDM 4 =two duplex outlets plus VDM **UNEIL** 2 =cut out for two outlets 3 =cut out for two outlets and one data/ communications 4 =cut out for four outlets 5 =CALA sized cut out for two outlets 6 =CALA sized cut out for four outlets **Cut Out Orientations:** Horizontal L =left R =right C =centered B =both left and right Vertical T =top or upper section of fascia B =bottom or lower section of fascia F =flush (28"h. fascias flush to the floor) **Finishes:** Laminate Flintwood Natural Veneer

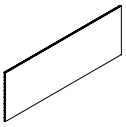

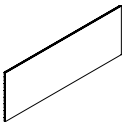

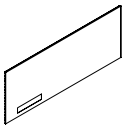

fascia basics (continued)

Product Name and Code	Illustration	Description
Solid Power/ Communications Fascia for Freestanding District (Clip Mounted) (UAECL) **and** **Solid International Power/ Communications Fascia for Freestanding District (Clip Mounted) (UAEIL)**		A solid fascia with electrical and communication cut outs that mounts into a panel wall frame with: -Freestanding feet -Accessory rail -The cut out locations are different than a UN__fascia to allow for the placement of freestanding feet below the panel frame -The cut out configurations and orientations available depend on size, see chart see power communications fascias chart **Heights:** 22" and 28"h. -Sizes are nominal, actual sizes are 1/2" less to accommodate a freestanding support foot **Widths:** 24" - 96" in 6" increments **Outlet Configurations:** UAECL 2 =one duplex outlet plus VDM 4 =two duplex outlets plus VDM UAEIL 2 =cut out for two outlets 3 =cut out for two outlets and one data/ communications 4 =cut out for four outlets 5 =CALA sized cut out for two outlets 6 =CALA sized cut out for four outlets **Cut out Locations:** One cut out LL =left RR =right LC =left center RC =right center 2 cut outs LR =left and right CR =left center and right CL =right center and left --See chart see power communications fascias chart **Finishes:** Laminate Flintwood Natural Veneer

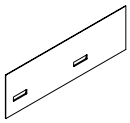

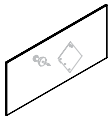

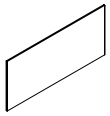

fascia basics (continued)

slot-mounted

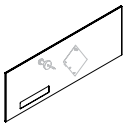

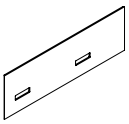

- The following fascias types mount to the Convertible Panel Wall Frame or Power Spine frame (depending on size). They provide a cost effective alternative to "D-Style" fascias and are unframed. They are also referred to as "L-Style" fascias
- All "L-Style" fascias mount into the panel wall slots
- An "L-Style" fascia can mount into a Flush or Elevated Panel Wall as these frames also contain slots, the clips on the panel walls will remain unused

Product Name and Code	Illustration	Description
Metal Fascia (UNELM)		A metal fascia that mounts into a panel wall frame **Heights:** 6", 7", 9", 13", 15", 22", 24", 26", 28", 30", 35" and 37"h. **Widths:** 6"h. - 28"h. 24" - 96"w. in 6" increments 30" and 37"h. 24" - 60"h. in 6" increments **Finishes:** Foundation Accent Mica
Metal Fascia for Freestanding District (UAELM)		A metal fascia that mounts into a panel wall frame with: Freestanding feet Accessory rail **Heights:** 6", 22", 28", and 35" h. -Mounted in the lowest level of the panel -Are used on panel wall frames with an accessory rail -1" less to allow for the thickness of the accessory rail **Widths:** 6"h. - 28"h. 24" - 96"w. in 6" increments 35"h. 24" - 60"h. in 6" increments **Finishes:** Foundation Mica
Communications Fascia (UNELCM) (shown) and Metal International Power/ Communications Fascia (UNELIM)		A metal fascia with electrical and communication cut outs that mounts into a panel wall frame **Heights:** 7", 13", 22", 26", 28" and 37" h. Available for above and below worksurface mounting **Widths:** 7" to 27"h 24" - 96" in 6" increments 37"h. 24" - 60"w. in 6" increments **Outlet Configurations:** UNELCM 2 =one duplex outlet plus VDM 4 =two duplex outlets plus VDM -See chart see power communications fascias chart for size restrictions UNEILM 2 =cut out for two outlets 3 =cut out for two outlets and one data/ communications 4 =cut out for four outlets 5 =CALA sized cut out for two outlets 6 =CALA sized cut out for four outlets -See power communications fascias chart for size restrictions **Cut Out Orientations:** Horizontal L =left R =right C =centered B = both left and right -See power communications fascias chart Vertical T = top or upper section of fascia B =bottom or lower section of fascia F =flush (28"h. fascias flush to the floor) -See power communications fascias chart for size restrictions **Finishes:** Foundation Mica

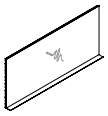

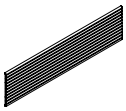

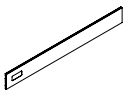

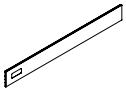

fascia basics (continued)

Product Name and Code	Illustration	Description
Metal Power/ Communications Fascia for Freestanding District (Slot Mount) (UAELCM) **and** **Metal International Power/Communications Fascia for Freestanding District (UAELIM)**		A metal fascia with electrical and communication cut outs that mounts into panel wall frame with: Freestanding feet Accessory rail -The cut out locations are different than a UN__fascia to allow for the placement of freestanding feet below the panel **Heights:** 22", 28" and 35" -Sizes are nominal, actual sizes are 1/2" less to accommodate a support foot **Widths:** 36" - 96" in 6" increments **Outlet Configurations:** UAECLM 2 =one duplex outlet plus VDM 4 =two duplex outlets plus VDM -See power communications fascias chart for size restrictions UAEILM 2 =cut out for two outlets 3 =cut out for two outlets and one data/ communications 4 =cut out for four outlets 5 =CALA sized cut out for two outlets 6 =CALA sized cut out for four outlets -See power communications fascias chart for size restrictions **Cut out Locations:** One cut out LL =left RR =right LC =left center RC =right center -See power communications fascias chart for size restrictions 2 cut outs LR =left and right CR =left center and right CL =right center and left -See power communications fascias chart for size restrictions **Finishes:** Foundation Mica
Tackable Fabric Fascia (UNELF)		A tackable fascia that mounts into a panel wall frame **Heights:** 6", 7", 9", 13", 15", 21" 24", 26" 28", 30", 35, 37 and 41" Fascias are tackable in all heights except 6" and 7" **Widths:** 24" - 96" in 6" increments **Finishes:** Fabric All standard Teknion panel fabrics
Tackable Fabric Fascia for Freestanding District (Slot Mount) (UAELF)		A tackable fascia that mounts into a panel wall frame with: Freestanding feet Accessory rail **Heights:** 6", 22", and 35" -Can only be mounted in the lowest level of the panel -Sizes are nominal, actual sizes are 1/2" less to accommodate a support foot **Widths:** 24" - 96" in 6" increments **Finishes:** Fabric All standard Teknion panel fabrics

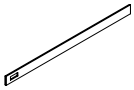

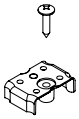

fascia basics (continued)

Product Name and Code	Illustration	Description
Tackable Fabric Power/ Communications Fascia (UNELCF) **and** **Tackable Fabric International Power/ Communications Fascia (UNELIF)**		A tackable fascia with electrical and communication cut outs that mounts into a panel wall frame **Heights:** 7", 13", 22", 26", 28", 35", 37" and 41"h. -Available for above and below worksurface mounting -Tackable in all heights except 7"h. **Widths:** 24" - 96" in 6" increments **Outlet Configurations:** UNELCF 2 =one duplex outlet plus VDM 4 =two duplex outlets plus VDM -See power communications fascias chart for size restrictions UNELIF 2 =cut out for two outlets 3 =cut out for two outlets and one data/ communications 4 =cut out for four outlets 5 =CALA sized cut out for two outlets 6 =CALA sized cut out for four outlets -See power communications fascias chart for size restrictions **Cut Out Orientations:** Horizontal L =left R =right C =centered B = both left and right -See power communications fascias chart for size restrictions Vertical T =top or upper section of fascia B =bottom or lower section of fascia F =flush (28"h. fascias flush to the floor) -See power communications fascias chart for size restrictions **Finishes:** Fabric All standard Teknion panel fabrics
Tackable Fabric Power/ Communications Fascia for Freestanding District (UAELCF) **and** **Tackable Fabric International Power/ Communications (UAELIF)**		A tackable fascia with electrical and communication cut outs that mounts into panel wall frame with: Freestanding feet Accessory rail -The cut out locations are different than a UN__fascia to allow for the placement of freestanding feet below the panel **Heights:** 22" and 35"h. -Sizes are nominal, actual sizes are 1/2" less to accommodate a support foot **Widths:** 36" - 96" in 6" increments Outlet Configurations: UAECLM 2 =one duplex outlet plus VDM 4 =two duplex outlets plus VDM -See power communications fascias chart for size restrictions UAEILM 2 =cut out for two outlets 3 =cut out for two outlets and one data/ communications 4 =cut out for four outlets 5 =CALA sized cut out for two outlets 6 =CALA sized cut out for four outlets -See power communications fascias chart for size restrictions **Cut Out Locations:** One cut out LL =left RR =right LC =left center RC =right center -See power communications fascias chart for size restrictions Two cut outs LR =left and right CR =left center and right CL =right center and left -See power communications fascias chart for size restrictions **Finishes:** Fabric All standard Teknion panel fabrics

fascia basics (continued)

Product Name and Code	Illustration	Description	
Whiteboard Fascia (UNEMB)		A whiteboard fascia that mounts into a panel wall frame -Available with or without a tray **Heights:** 22", 24", 30" and 37"h.	**Widths:** 36", 42" and 48"w. **Finishes:** Foundation Mica
Accessory Fascia (UNELA)		An accessory rail that mounts into a panel wall frame **Heights:** 6", 13" and 15"h **Widths:** 24" - 96"w. in 6" increments	**Finishes:** Foundation Mica
Metal Base Feed Fascia (UNELMB) (shown)		A 6"h. metal fascia with a cut out that allows power and communication cables to enter a panel wall frame at the base level **Widths:** 36" - 96"w. in 6" increments	**Finishes:** Foundation Mica
Metal Base Feed Fascia for Freestanding Application (UAELMB)		A 6"h. metal fascia with a cut out that allows power and communication cables to enter a freestanding panel wall frame at the base level -Height is nominal, actual sizes are 1/2" less to accommodate a support foot **Widths:** 36" - 96"w. in 6" increments	**Cut Out Locations:** Left Right Centered -See power communications fascias chart for location restrictions **Finishes:** Foundation Mica
Fabric Base Feed Fascia (UNELFB)		A 6"h. fabric fascia with a cut out that allows power and communication cables to enter a freestanding panel wall frame at the base level **Widths:** 24" - 96"w. in 6" increments **Cut Out Locations:** Left Right Centered -See power communications fascias chart for location restrictions	**Finishes:** Fabric All standard Teknion panel fabrics

fascia basics (continued)

Product Name and Code	Illustration	Description
Fabric Base Feed Fascia for Freestanding District (UAELFB)		A 6"h. fabric fascia with a cut out that allows power and communication cables to enter a freestanding panel wall frame at the base level -Height is nominal, actual sizes are 1/2" less to accommodate a support foot **Widths:** 36" - 96"w. in 6" increments **Locations:** Left Right Centered -See power communications fascias chart for location restrictions **Finishes:** Fabric All standard Teknion panel fabrics
Fascia Clip Kit (UNELK)		Fascia Clips are required to mount clip-mounted fascias to a Convertible Panel Frame -The quantity required varies depending on the size of the panel wall frame -Kits are available in packages of 25 or 100 clips

fascia basics (continued)

The following charts outline the number of clips required for each clip mounted fascia.

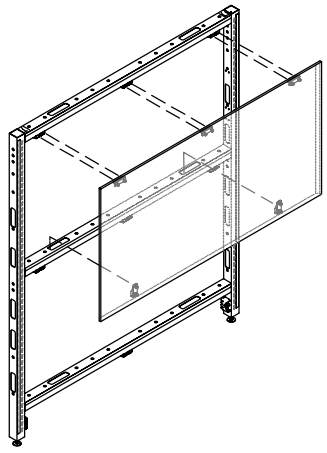

Panel Height	Panel Width	Number of Clips	
		Flush	Elevated
29	24	4	2
29	30	4	2
29	36	4	2

66	96	22	16

planning with fascias

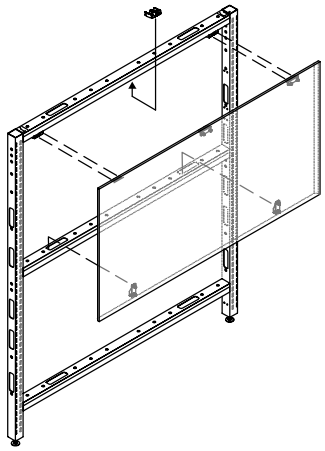

The following should be considered when planning with District Fascias.

clip-mounting vs. slot-mounting

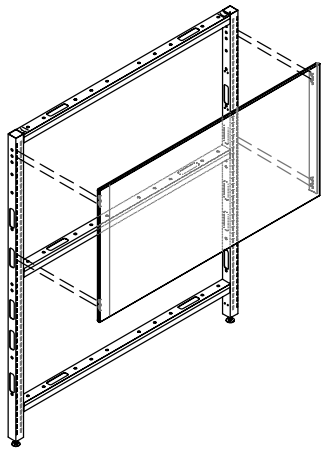

Fascias with Clips ("D" style)

- Intended to mount to Flush or Elevated Panels
- The clip on the fascia connects to the clip on the panel wall frame

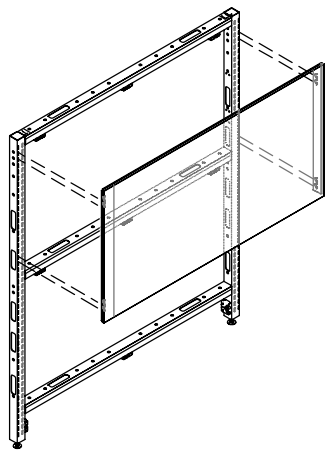

- Clip mounted fascias can also be mounted to a Convertible panel frame, however fascia clips will have to be installed on the panel wall frame (Fascia Clip Kit UNELK)

Slot Mounted Fascias ("L" style)

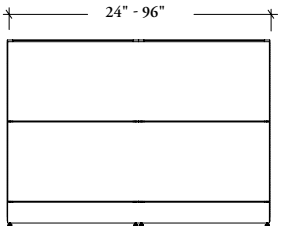

- Intended to mount to Convertible Panel Wall frames
- There are no clips on either the fascia or the frame, the fascias mount into the vertical slots of the frame
- Mounting into the slots will not interfere with slot accessibility for mounted storage or supports

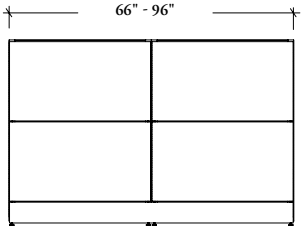

- Slot mounted fascias can also be mounted to a Flush or Elevated panel frame, however the existing clips on the frame will not be used

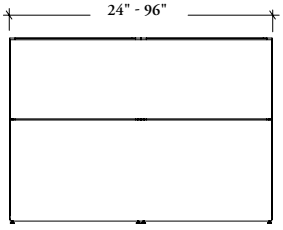

planning with fascias (continued)

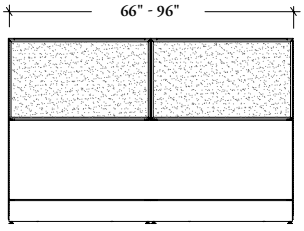

fascia widths

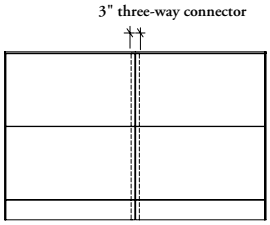

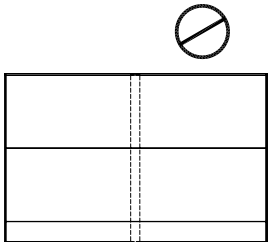

- Fascias can span the entire width of a panel wall frame regardless of whether it is made up of one or two frame sections as the fascias sit outside of the frame
- On panel wall frames that are made up of two frame sections (66" or wider) two equally wide fascias can be specified, one mounting to each section

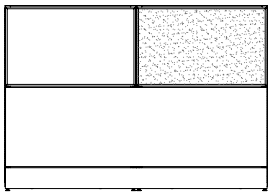

- Fascia widths can be different on opposite sides of a panel, and above and below the 29" high datum as long as they match the datum heights and the width of the panel frame sections

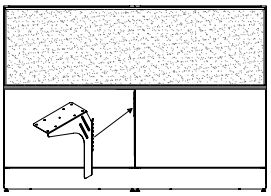

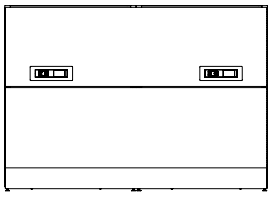

- Two Stretch Fascias span across a three-way connector to conceal the connector to provide a cleaner aesthetic
- A single stretch fascias **cannot** extend over two panel wall frames and the three-way connect, two fascias are required that meet in the middle of the connector

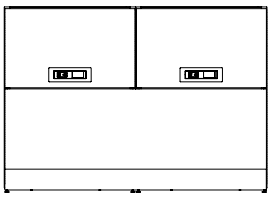

- Fascias above the 29"datum height are typically split to add functionality to a workstation

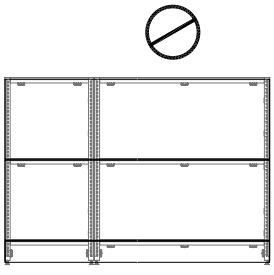

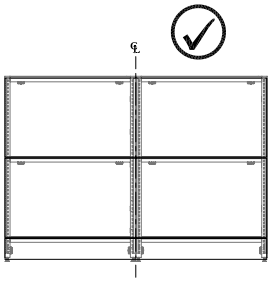

- Fascias below the 29" datum height are typically split when worksurface height-adjustability is required
- Height-adjustable cantilevers require the vertical slot on a panel wall to be exposed for mounting (see Supports section)

- Fascias above and below the worksurface can be split to achieve specific power/communication locations
- Fascia widths under 42" have cut outs available only in the center of the fascia, and fascia widths over 66" have power available only on the right or left side, so splitting fascias into smaller sizes can provide power closer to the center of the panel wall

- A fascia over 66"w. must span across two equally sized frames
- Clip mounted fascias have specific clip locations that must line up with the locations on the frames
- Slot mounted fascias are often reinforced at the center point of the fascia so require the slots to attach to

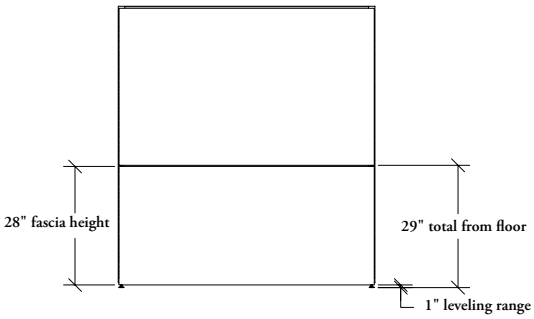

planning with fascias (continued)

fascia heights

- District fascias are available in a variety of heights to achieve different looks and levels of functionality
- The 6" and 29"h. are the only fixed rails

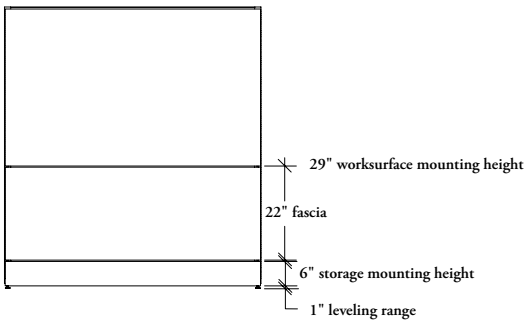

all panel heights (except 42"h)

- The 29" h. datum is always exposed

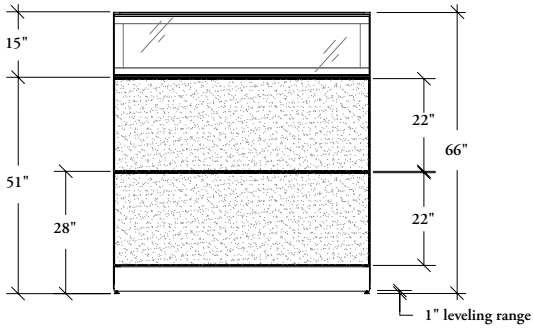

Monolithic aesthetic

- Segmentation only at the 29" datum height

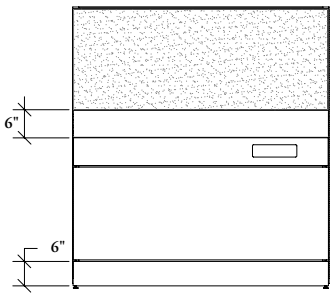

Below worksurface segmentation for added functionality

- 6" and 29" high horizontal segmentation allows for worksurface and storage mounting

Above worksurface segmentation for added functionality

- If segmentation is required above the 29"h. rail, additional panel wall rails or light block rails are required (ex. above - one additional rail is required at the 51"h. datum)

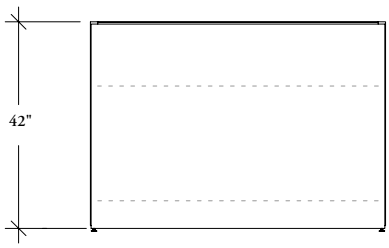

Reconfigurable fascias

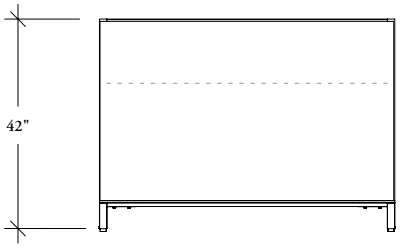

- The same fascia can be used above and below the worksurface to add to the reconfigurability of a panel wall (ex. above - a 6" fascia is used at the base of the panel, and between 36" and 42'h.)

42" high panels only

- Monolithic fascias are available for 42" high panels only

- A 41"h. fascia is used on a Flush or Conventional Panel Wall, and covers the 6" and 29"h. fixed rails

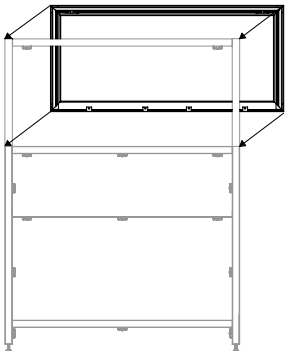

- A 35" h. fascia is used on an Elevated Panel Wall, and covers the 29"h. fixed rail

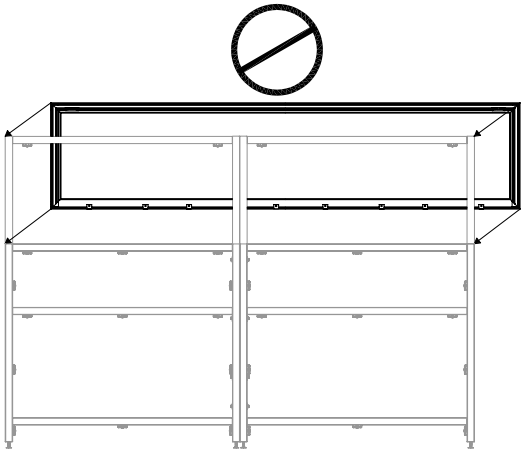

planning with window fascias

The following should be considered when planning with District Window Fascias.

• Window fascias mount into a panel wall frame, they do **not** mount above the frame

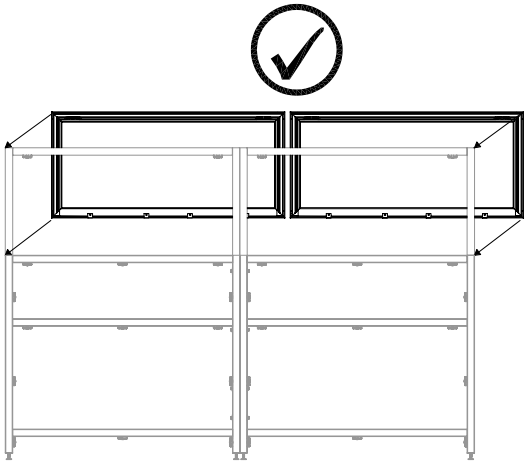

• A panel wall frame up to 60"w. is only one frame section so can accommodate a single window fascia

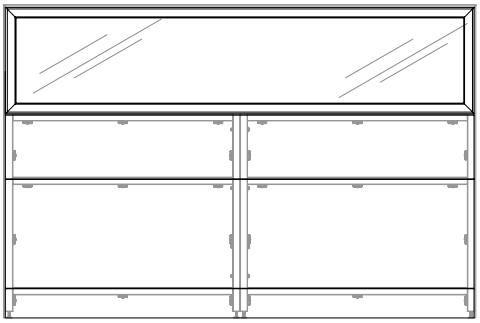

• A panel wall frame 66"w and wider consists of two frame sections

• It **cannot** accommodate a single window fascia

• Two equally sized windows must be specified, one will fit into each section of the panel wall frame

• If a single span of glass is desired for panels over 60" wide, the window / UNEW_R must be used as it mounts above the frame

planning with power communications fascias on non freestanding panels

Power and Communication Fascia cut outs are available in a variety of locations depending on the size of the fascia. The following chart is an overview of the available locations.

fascias for non freestanding panels

UNECL Solid Power Communications Fascia (Clip Mount)
UNEIL Solid International Power Communications Fascia (Clip Mount)
UNELCM Metal Power/Communications Fascia (Slot Mount)

■ Available

Not Available

planning with power communications fascias on freestanding panels (continued)

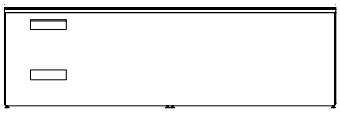

electrical/communication outlet locations

- Careful attention is required when planning with UA_ Power Communication Fascias.
- The support on the freestanding foot extends from the bottom of the panel to the top, so no electrical can be placed above it
- The UA_ fascia has additional location options to accommodate this

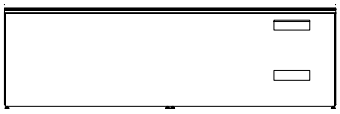

The UA_ fascia is not available 24" or 30"w, when these sizes are required a UN_ power communication fascia must be used

UN_ fascias can be used in freestanding applications, as long as the cut out location is not over a freestanding foot

fascias 36" - 60"

Left (LL)

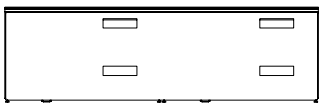

Right (RR)

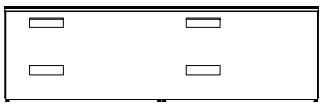

fascias 66" - 96"

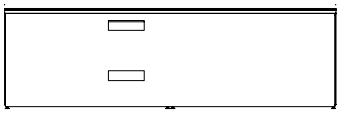

Left and Right (LR)

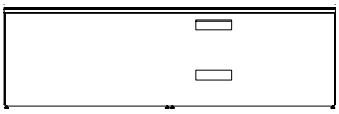

Left Center and Right (LC)

Right Center and Left (RC)

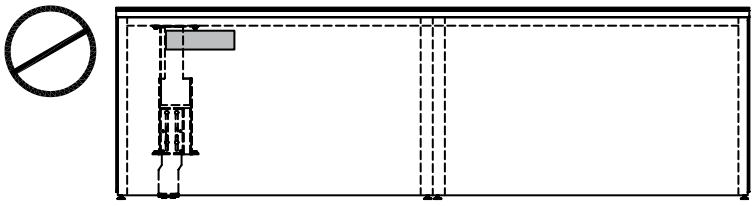

Left Center (LC)

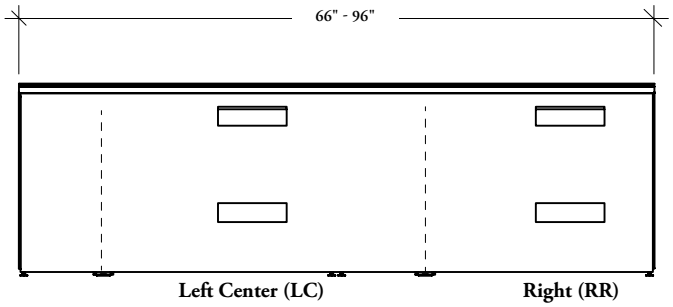

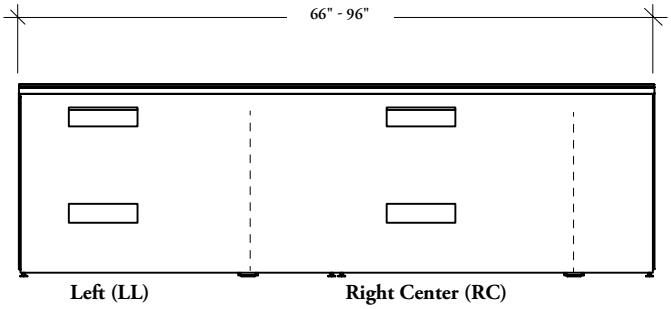

Left Center (RC)

planning with power communications fascias on freestanding panels (continued)

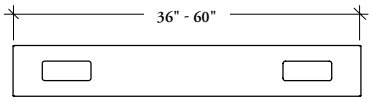

The following are recommended configurations for planning power/communication and support foot locations.

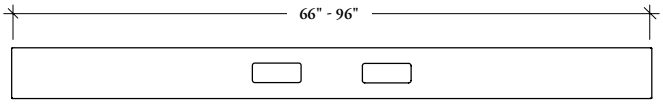

base feed fascias

Base Feed Fascias provide a cut out location for bringing power and communications wires into a workstation. The cut out locations vary depending on the width of the panel frame.

- When a 36" - 60" wide fascia is specified the Left and Right cut out will be justified to the outer sides of the fascia

- When a 66" - 96" wide fascia is specified the Left and Right cut out will be justified to the center of the frame

understanding power spine

District Power Spine offers a simple and cost effective way to divide space and route power and data. It is available in Linear, Zig Zag and 120 Hub profiles.

linear and floor flush profile

Power Spine provides affordable power delivery, flexible planning and simple to specify linear planning.

zig zag profile

Zig Zag Power Spine provides an unique expression that gives the user the feeling of their own corner or nook.

120 hub profile

This 120˚ Hub offers privacy for heads down work, while optimizing the space in any office environment.

understanding power spine (continued)

Power Spine is designed to match the style of District although it is not a panel, it is a power spine. It has unique components and uses many components from District to complete a power spine configuration.

The unique components include:
- panel frame
- support kit
- lateral screens
- worksurface kits
- power spine specific to hiSpace tables
- base feed cover

The shared District components include:
- fabric, metal and solid fascias 13", 26", 35" and 41" height only
- top and end trims
- add-on glass, felt and infinity screens
- desk mounted screens
- electrics

It can be planned with Floor Flush Linear, Linear, Zig Zag and 120 Hub configurations.

The Linear, Zig Zag and 120 Hub configurations offer a 15'' high opening at the bottom of the panel.

Two frame heights are available for Linear, Zig Zag and 120 Hub:
- 29" (accepts a 13" add-on screens for an overall height of 42")
- 42" (accepts a 9" add-on screens for a maximum overall height of 51")

Floor Flush Power Spine heights are available:
- 29" (accepts a 28'' or 22'' + 6'' base feed fascia)
- 42'' (accepts a 41" or 35" + 6" base feed fascia)

Power Spine can be planned for various applications from freestanding height-adjustable tables to fixed worksurfaces to casual lounge environments.

The following typicals demonstrate layouts possible with Power Spine.

with height-adjustable tables

Mobile furniture and height-adjustable tables can be placed along the spine to meet task-intensive needs, yet still allow the furniture to be repositioned as needed.

understanding power spine (continued)

with fixed worksurfaces

Semi-suspended worksurfaces combined with floor screens provide a more conventional workstation.

with casual lounge furniture

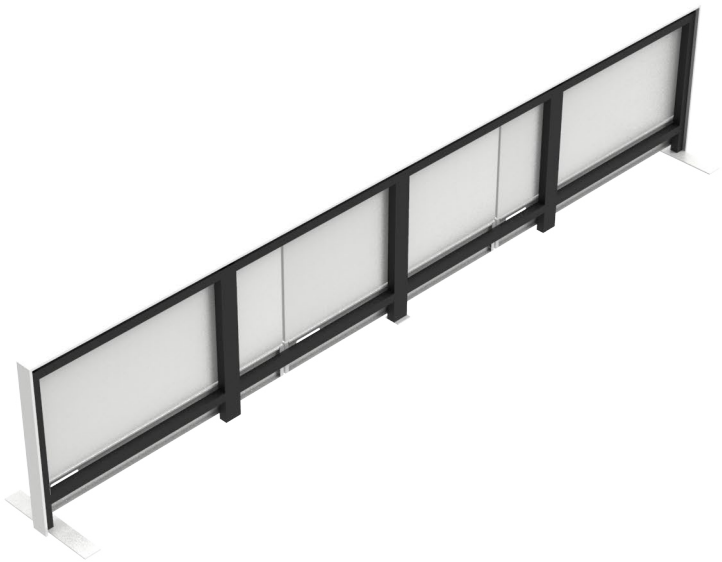

The spine provides space division and power access in casual environments and open collaborative spaces.

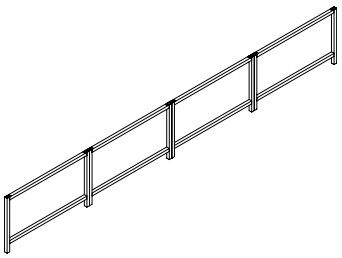

floor flush panel basics

Power Spines are specified the complete length of the configuration and not as individual modules. The Support Kit is also specified the complete length so that the proper amount of feet and posts are included.

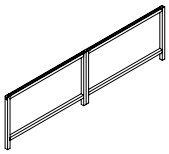

- Module Widths: 48", 60", 66", 72", 84"
- Overall Widths: 96", 120", 132" 14A", 144", 168", 180", 192", 198", 216", 240", 288", 252", 264" 336"
- Power Spine widths over 240" recommend lateral screens at the ends for support

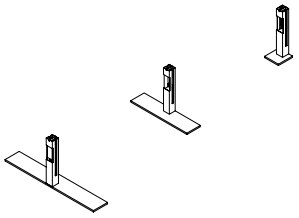

Floor Flush Power Spine (UNFF)

- Height: 29"
- Compatible with:
  - Standard District Top Trims and End Trims
  - Panel Wall Add-On Screens - Glass
  - Panel Wall Add-On Screens - Felt
- Fascias:
  - 28" high or 22"+ 6" base feed fascia
  - For metal/fabric fascias choose: Frame for Metal/Fabric
  - For solid fascias choose: Frame for Solid Fascia
- Can accommodate semi suspended worksurfaces since the mounting channel at 29" high remains accessible

Floor Flush Inset Power Spine (UYFF)

- Height: 29", 42"
- Compatible with:
  - District Panel Top Trim for Panels with Inset Glass (6mm and 10mm)
  - District Panel Top Trim for Panels with Inset Smooth Felt
  - Panel Top Trim for Panels with Inset Glass
  - Panel Glass Blade for Panels with Inset Glass (6mm and 10mm)
  - Smooth Felt Blade for Panels with Inset
- Fascias:
  - 41" high or 35"+6" base feed fascia
  - For metal/fabric fascias choose: Frame for Metal/Fabric
  - For solid fascias choose: Frame for Solid Fascia
- Cannot accommodate worksurfaces on the 29" high frame
  - 29" high datum is inaccessible due to the frame structure for inset glass or felt screens
  - 42" high panel

Floor Flush Power Spine Support Kit (UZFF)

- Height: 29", 42"
- Components include:
  - large or medium feet (levelers between if needed)
- Large feet are 18" deep
- Medium feet are 12" deep
- Number of large and medium is dependent on support kit selected. Refer to chart on price page
- Finishes:
  - Foundation
  - Mica
  - Accent

power spine basics

The Power Spine structure consists of a frame and support kit. End and top trims, fascias, screens and electrical components are added from the District offering.

linear

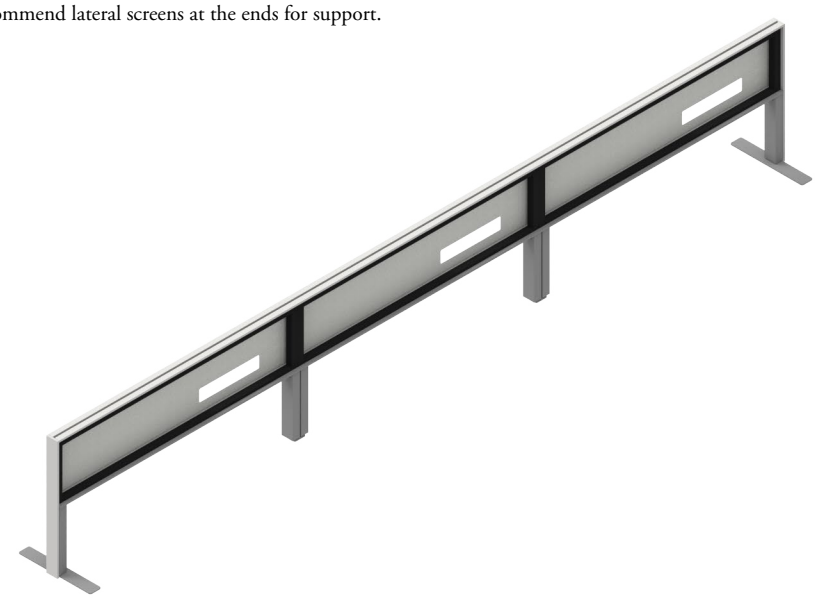

Power Spines are specified the complete length of the configuration and not as individual modules.

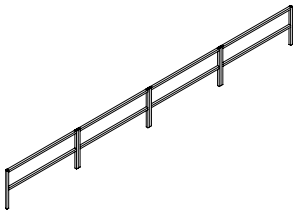

The Support Kit is also specified the complete length so that the proper amount of feet and posts are included.

• Module Widths: 48", 60", 66", 72", 84"

• Overall Widths: 96", 120", 132", 14A", 144", 168", 180", 192", 198", 216", 240", 288", 252", 264", 336"

Power Spine widths over 240" recommend lateral screens at the ends for support.

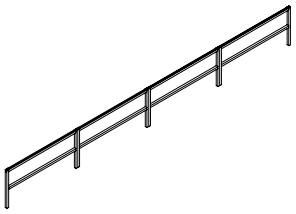

Power Spine Panel (UNPZ)

• Height: 29"

• Compatible with:
- Standard District Top and End Trims
- Panel Wall Add-On Screens - Glass
- Panel Wall Add-On Screens - Felt

• Can accommodate semi-suspended worksurfaces since the mounting channel at 29"high remains accessible

• Fascias:
- 13" metal/fabric fascia paired with Frame for Metal/Fabric
- 13" solid fascia paired with Frame for Solid Fascias

Power Spine Inset Panel (UYPZ)

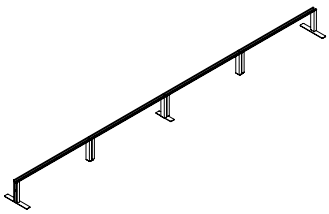

• Height: 29", 42"

• Compatible with:
- District Panel Top Trim for Panels with Inset Glass (6mm and 10mm)
- District Panel Top Trim for Panels with Inset Smooth Felt
- Panel Top Trim for Panels with Inset Glass
- Panel Glass Blade for Panels with Inset Glass (6mm and 10mm)
- Smooth Felt Blade for Panels with Inset
- Infinity Add-On Blade with Panel Top Trim for Panels with Inset Glass (UYTT) (6mm)

• Fascias for 29" high
- 13" metal/fabric fascia paired with Frame for Metal/Fabric
- 13" solid fascia paired with Frame for Solid Fascias

• Fascia for 42" high
- 26" metal/fabric fascia paired with Frame for Metal/Fabric
- 26" solid fascia paired with Frame for Solid Fascias

• Cannot accommodate worksurfaces on the 29" high frame
- 29" and 42" high datum is inaccessible due to the frame structure for inset glass or felt screens

Power Spine Support Kit (UZPK)

• Height: 29", 42"

• Components include:
- bottom trim
- leg covers
- large or medium feet and post feet

• Support Types:
- no support post
- with center support post
- with offset support post

• Large feet are 18" deep

• Medium feet are 12" deep

• The number of large and medium feet is dependent on support kit selected. Refer to chart on price page

• Finishes:
- Foundation
- Mica
- Accent

power spine basics (continued)

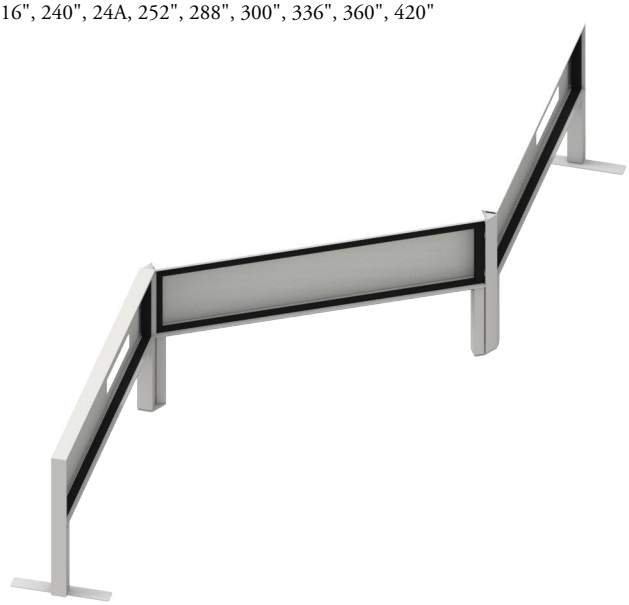

zig zag

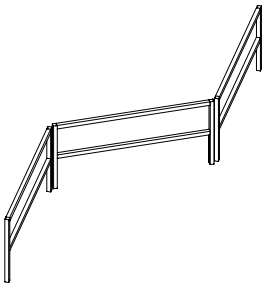

Zig Zag Power Spines are specified the complete length of the configuration and not as individual modules. Includes a centralized single post at each junction.

The Support Kit is also specified the complete length so that the proper amount of feet and posts are included.

The Zig Zag spine is offered in spine lengths of three, four or five segments of standard module sizes, where the in line Power Spine is limited to four.

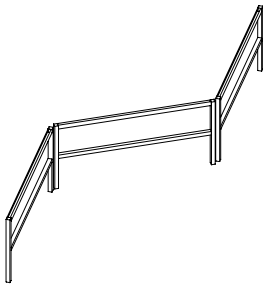

- Standard Height: 29"
- Inset Height: 29", 42"
- Module Widths: 48", 60", 72", 84"
- Overall Widths: 14A, 180", 192", 216", 240", 24A, 252", 288", 300", 336", 360", 420"

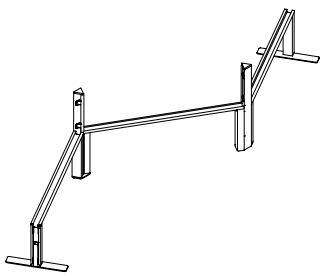

Power Spine Zig Zag (UNZZ)

- Height: 29"
- Compatible with:
  - Standard District Top and End Trims
  - Panel Wall Add-On Screens - Glass
  - Panel Wall Add-On Screens - Felt
- Can accommodate semi-suspended worksurfaces since the mounting channel at 29"high remains accessible
- Fascias:
  - 13" metal/fabric fascia paired with Frame for Metal/Fabric
  - 13" solid fascia paired with Frame for Solid Fascias

Power Spine Zig Zag Inset Panel (UYZZ)

- Height: 29", 42"
- Compatible with:
  - District Panel Top Trim for Panels with Inset Glass (6mm and 10mm)
  - District Panel Top Trim for Panels with Inset Smooth Felt
  - Panel Top Trim for Panels with Inset Glass - Panel Glass Blade for Panels with Inset Glass (6mm and 10mm)
  - Smooth Felt Blade for Panels with Inset
  - Infinity Add-On Blade with Panel Top Trim for Panels with Inset Glass (UYTT) (6mm)
- Fascias for 29" high
  - 13" metal/fabric fascia paired with Frame for Metal/Fabric
  - 13" solid fascia paired with Frame for Solid Fascias
- Fascia for 42" high
  - 26" metal/fabric fascia paired with Frame for Metal/Fabric
  - 26" solid fascia paired with Frame for Solid Fascias
- Cannot accommodate worksurfaces on the 29" high frame
  - 29" high datum is inaccessible due to the frame structure for inset glass or felt screens
  - 42" high panel

Power Spine Zig Zag Support Kit (UZZK)

- Height: 29", 42"
- Components include:
  - top cap
  - vertical trims
  - connectors
  - gaskets
  - shared feet
  - bottom trims and covers
  - two large feet
  - support feet
  - leg covers
- Large feet are 18" deep
- The number of large and medium feet is dependent on support kit selected. Refer to chart on price page
- Finishes:
  - Foundation
  - Mica
  - Accent

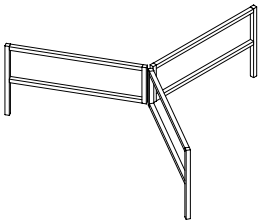

power spine basics (continued)

120 hub panel

The 120 Hub consists of three panels in a 120˚ configuration and is specified as a complete frame The Support Kit is also specified as a complete unit.

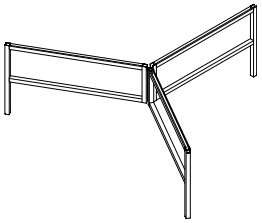

- Standard Height: 29"
- Inset Height: 29", 42"
- Module Widths: 48", 60"

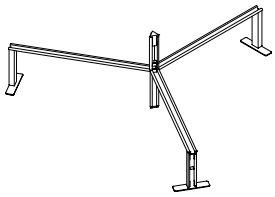

Power Spine 120 Hub Panel (UNYH)

- Height: 29"
- Compatible with:
  - Standard District Top and End Trims
  - Panel Wall Add-On Screens - Glass
  - Panel Wall Add-On Screens - Felt
- Can accommodate semi-suspended worksurfaces since mounting channel at 29" high the remains accessible
- 13" fabric or metal fascias are specified with this frame
- Fascias:
  - 13" metal/fabric fascia paired with Frame for Metal/Fabric
  - 13" solid fascia paired with Frame for Solid Fascias

Power Spine 120 Hub Inset Panel (UZYH)

- Height: 29", 42"
- Compatible with:
  - District Panel Top Trim for Panels with Inset Glass (6mm and 10mm)
  - District Panel Top Trim for Panels with Inset Smooth Felt
  - Panel Top Trim for Panels with Inset Glass
  - Panel Glass Blade for Panels with Inset Glass (6mm and 10mm)
  - Smooth Felt Blade for Panels with Inset
  - Infinity Add-On Blade with Panel Top Trim for Panels with Inset Glass (UYTT) (6mm)
- Fascias for 29" high
  - 13" metal/fabric fascia paired with Frame for Metal/Fabric
  - 13" solid fascia paired with Frame for Solid Fascias
- Fascia for 42" high
  - 26" metal/fabric fascia paired with Frame for Metal/Fabric
  - 26" solid fascia paired with Frame for Solid Fascias
- Cannot accommodate worksurfaces on the 29" high frame
  - 29" high datum is inaccessible due to the frame structure for inset glass or felt screens
  - 42" high panel

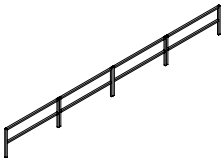

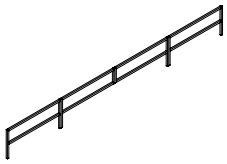

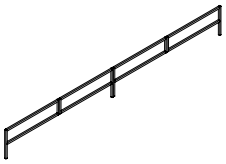

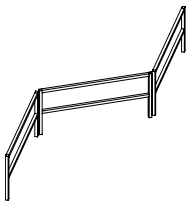

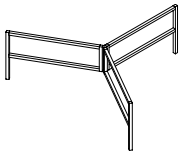

Power Spine 120 Hub Support Kit (UZYK)

- Height: 29", 42"
- Components include:
  - top cap
  - connectors
  - gaskets
  - central post
  - bottom trims
  - three med feet are 12" deep
- The number of large and medium is dependent on support kit selected (see chart)
- Finishes:
  - Foundation
  - Mica
  - Accent

power spine basics (continued)

The following chart shows the number of panels within a Power Spine span.

POWER SPINE LINEAR		
		
CENTER POST	**OFFSET POST**	**NO POST**
120 (two 60" panels)	14A (one 48" panel, one 96" panel)	96 (one 96" panel)
132 (two 66" panels)	180 (one 60" panel, one 120" panel)	120 (one 120" panel)
14A (three 48" panels)	192 (two 48" panels, one 96" panel)	192 (two 96" panels)
144 (two 72" panels)	240 (two 60" panels, one 120" panel)	240 (two 120" panels)
168 (two 84" panels)		
180 (three 60" panels)		
192 (four 48" panels)		
198 (three 66" panels)		
216 (three 72" panels)		
240 (four 60" panels)		
252 (three 84" panels)		
264 (four 66" panels)		
288 (four 72" panels)		
336 (four 84" panels)		

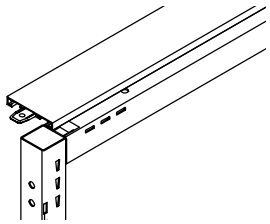

FLOOR FLUSH POWER SPINE	POWER SPINE ZIG ZAG	POWER SPINE 120
		
096 (one 96" panels)	14A (three 48" panels)	48 (three 48" panels)
120 (two 60" panels)	180 (three 60" panel)	60 (three 60" panels)
132 (two 66" panels)	192 (four 48" panels)	
14A (three 48" panels)	216 (three 72" panels)	
144 (two 72" panels)	240 (four 60" panels)	
168 (two 84" panels)	24A (five 48" panels)	
180 (three 60" panels)6	252 (three 84" panels)	
192 (four 48" panels)	288 (four 72" panels)	
198 (three 66" panels)	300 (five 60" panels)	
216 (three 72" panels)	336 (four 84" panels)	
240 (four 60" panels)	360 (five 72" panels)	
252 (three 84" panels)	420 (five 84" panels)	
264 (four 66" panels)		
288 (four 72" panels)		
336 (four 84" panels)		

planning with power spine, top trims & screens

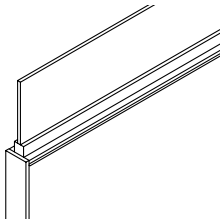

The following should be considered when planning with Power Spine Panels and Panel Spine support kits.

Two frame types are available for Floor Flush, Linear, Zig Zag and Hub Power Spine Panels.

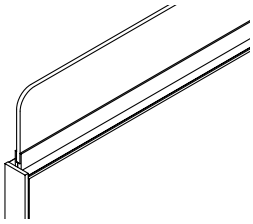

power spine panel

- Accepts a standard top trim
- If an add-on is desired, the top trim is replaced with a standard Panel Wall Add-On Screen – Glass or Felt Screen
- Must be used when semi-suspended worksurfaces are specified to allow access to the horizontal mounting rail

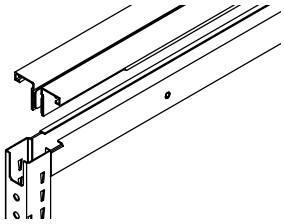

- Accepts add-on screen glass

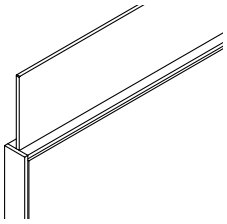

- Accepts add-on screen felt

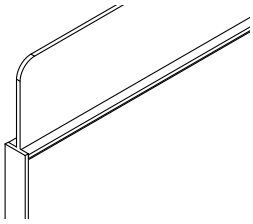

power spine inset panel

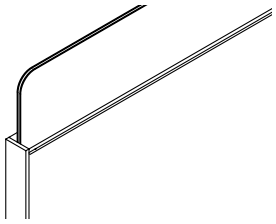

- Accepts a Panel Top Trim with Inset Glass, Infinity Fabric Screen or Felt
- Inset Panels are compatible with all Top Trim options
- **Cannot** be used when semi-suspended worksurfaces are specified as there is no horizontal mounting rail available

- Accepts panel glass blade

- Accepts panel felt blade

- Accepts infinity blade

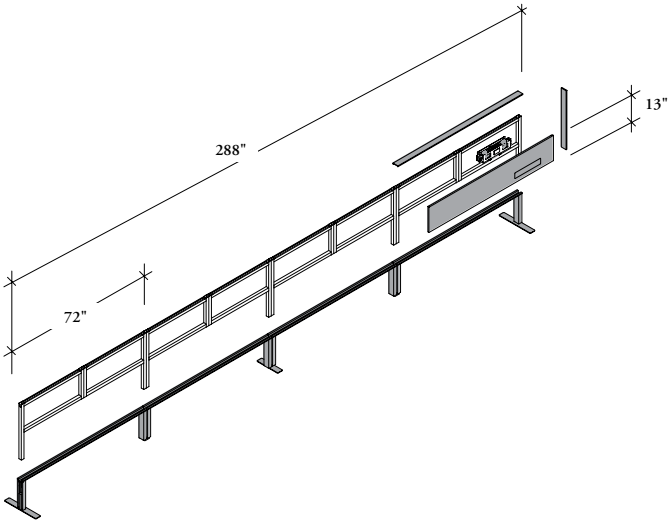

End trims, top trims and fascias are specified from the standard District product offering for all Panel Spine types:

- One solid, metal or fabric fascia is required on each side of a module

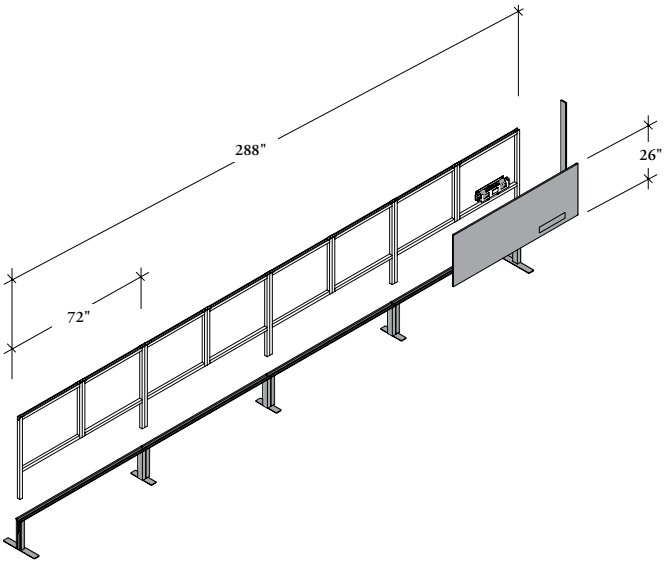

planning with power spine fascias

The following should be considered when planning with power spine fascias.

linear power spine

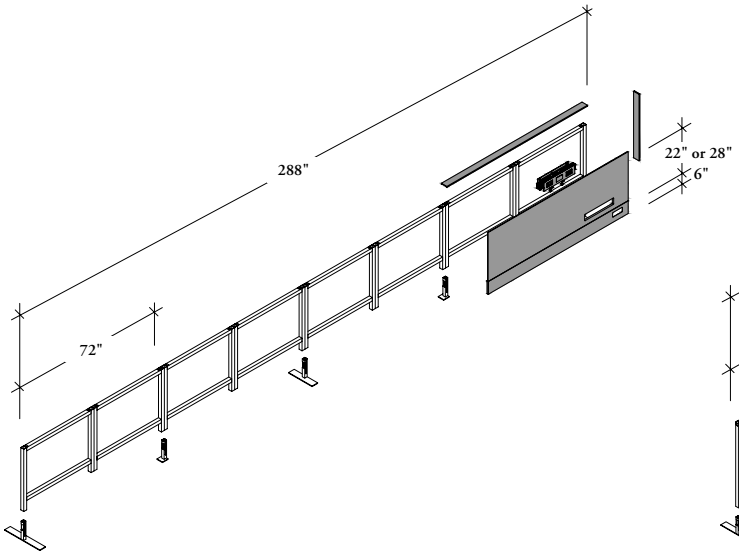

Example: 288" Power Spine
- Panels 29" high consisting of four 72" wide modules

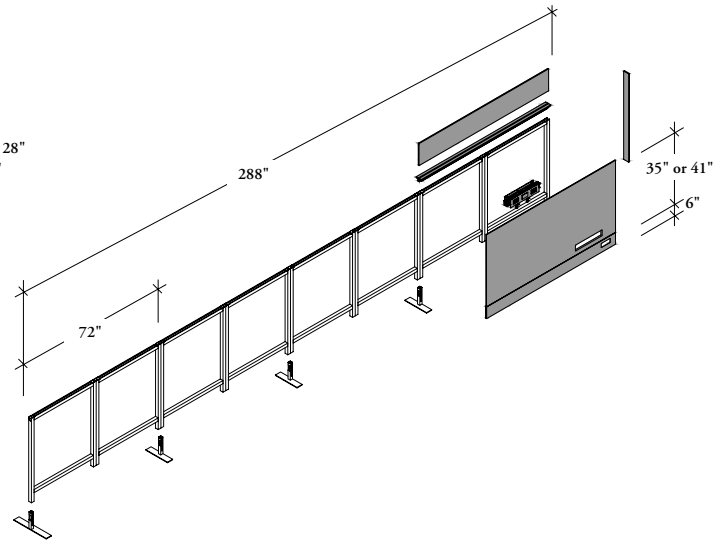

Example: 288" Power Spine
- Panels 42" high consisting of four 72" wide modules

floor flush power spine

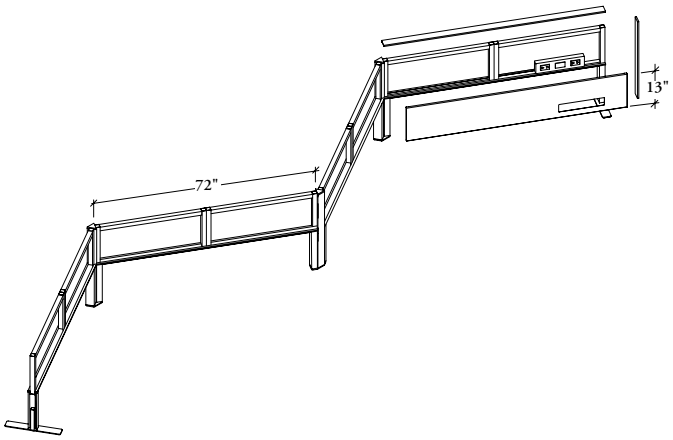

Example: 288" Floor Flush Power Spine
- Panels 29" high consisting of four 72" wide modules

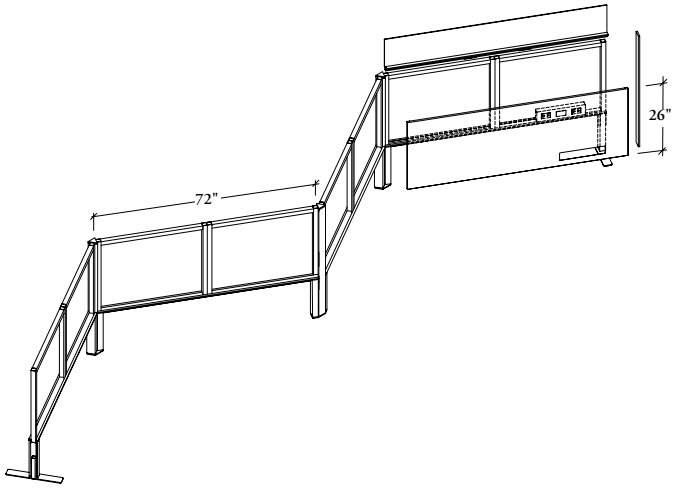

Example: 288" Floor Flush Power Spine
- Panels 42" high consisting of four 72" wide modules

planning with power spine fascias (continued)

zig zag spine

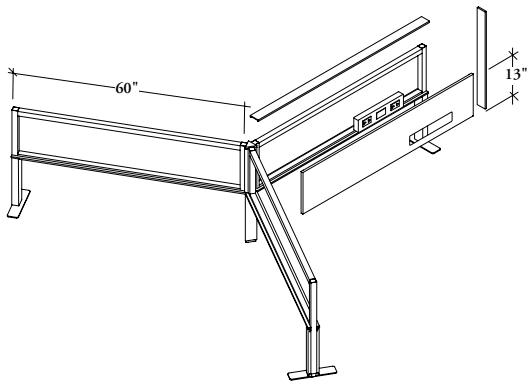

Example: 288" Power Spine
- Panels 29" high consisting of four 72" wide modules

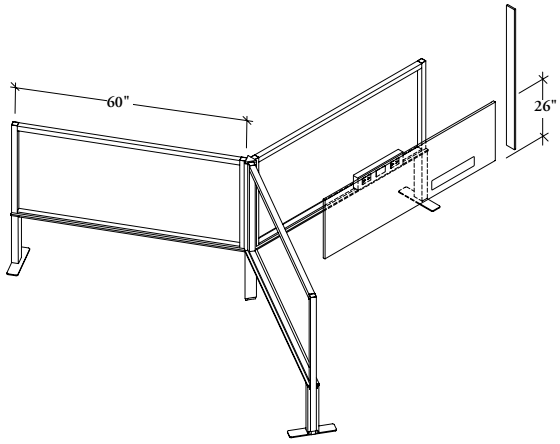

Example: 288" Power Spine
- Panels 42" high consisting of four 72" wide modules

power spine 120 hub

Example: 288" Power Spine
- Panels 29" high consisting of three 60" wide modules

Example: 288" Power Spine
- Panels 42" high consisting of three 60" wide modules

planning with power spine fascias (continued)

Linear Power Spine frames are available in three configurations.

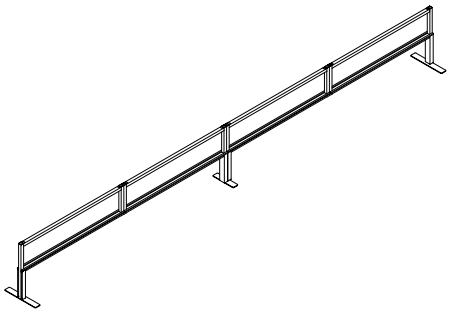

All support kits have a foot at each end as well as additional feet and support along the length depending on the size and configuration.

No Support (N)

Allows for large spans without feet in these conditions:

- When no add-ons are used
- When felt screen add-ons are used

Cannot be used with glass add-on screens.

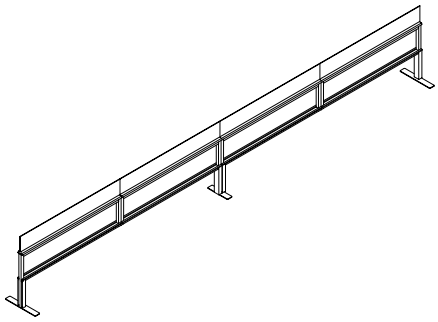

29" high frame shown

Center Support (C)

• Used when glass panel add-ons are used

• It provided the additional support required for the glass

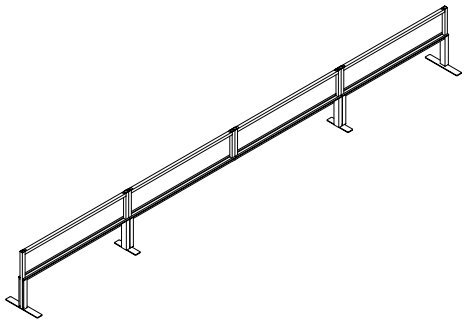

29" high frame shown.

Offset Support Post (F)

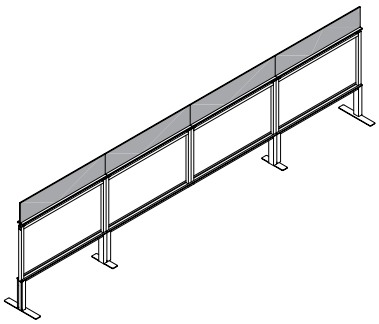

The offset placement allows for less visible support locations on a spine and is used when:

- When no add-ons are used
- When felt screen add-ons are used

Cannot be used with glass add-on screens.

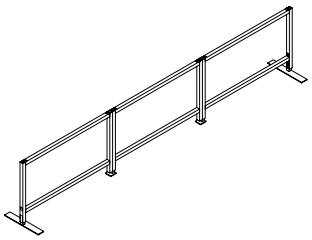

29" high frame shown

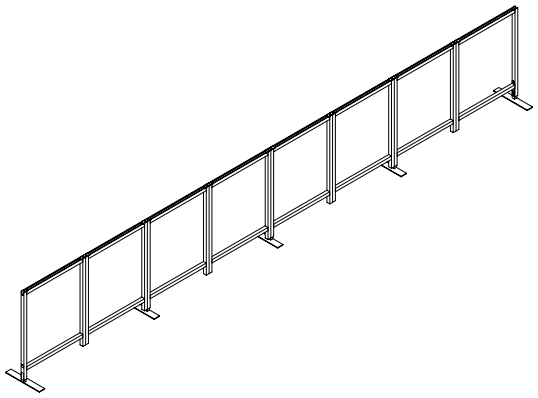

42" high frame shown

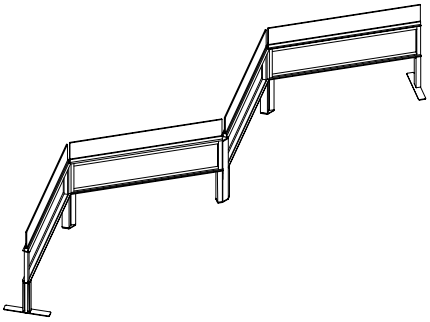

planning with power spine fascias (continued)

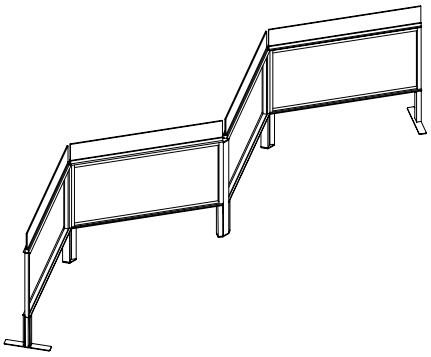

the floor flush power spine includes two large feet at the ends and levelers or medium feet, depending on the width span chosen

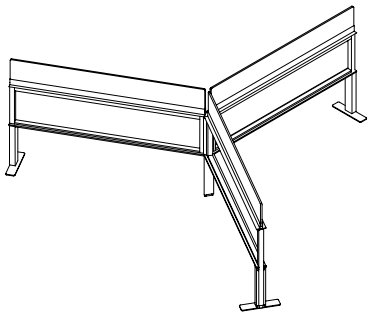

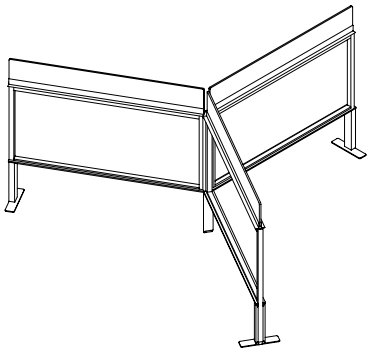

the power spine zig zag panel always has a center support

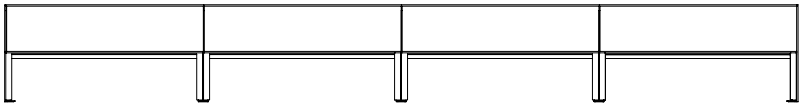

the power spine 120 hub panel always has a center support

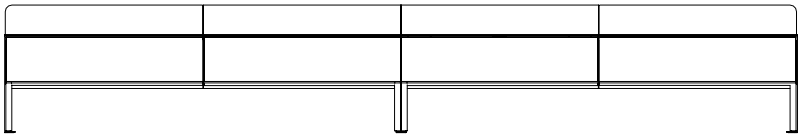

planning with power spine fascias (continued)

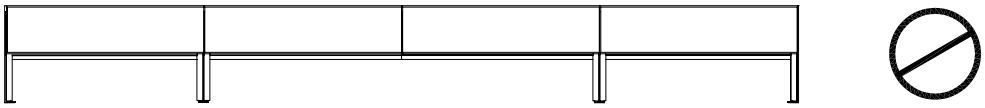

Additional rules also apply when planning with Linear and Floor Flush Power Spine.

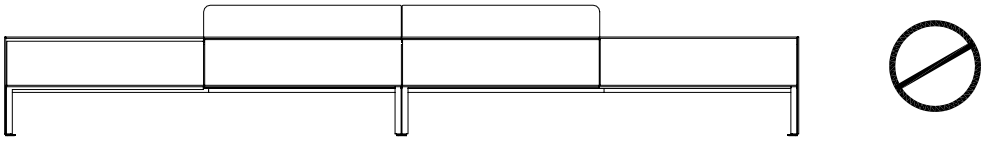

Any spine run length can be done as long as there is a support foot every 96".

Any 29" high Power Spine with no center support or offset support must be planned with a Smooth Felt Add On on top of the Power Spine.

Spine Frame at 29" high with 120", 180" or 240"W without Felt or Add-on Screens cannot plan with any offset (F) or no support (N) options.

Spine runs with a span of 120" must be planned with a continuous PET Panel Wall Add-On Screens.

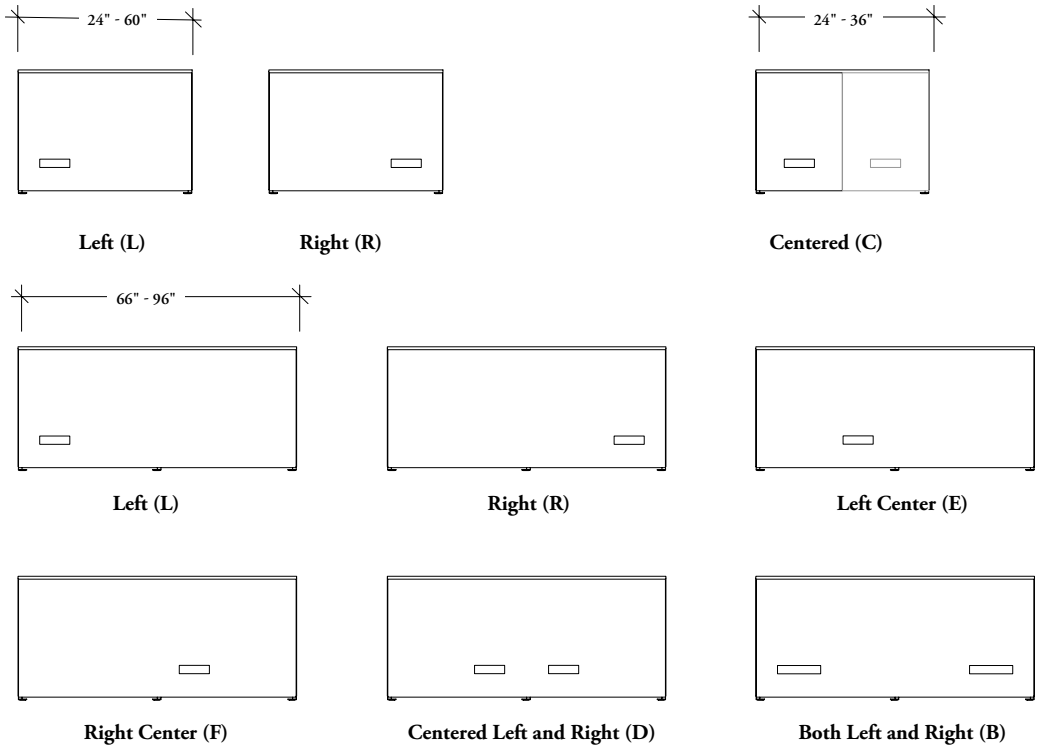

Cannot span only a partial width.

Any type of add-on screens should run the entire length of the spine.

planning with power spine fascia cut outs

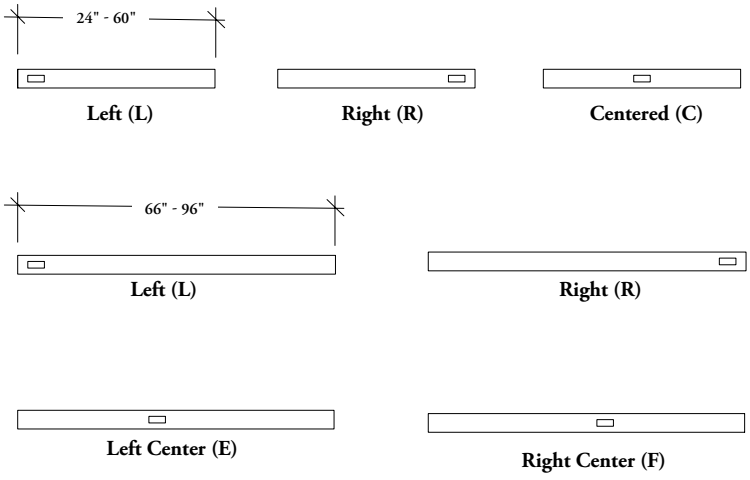

power/communications fascias

The examples below are shown with Tackable Fabric Power/Communication Fascias (Slot Mount) (UNELCF) shown at 41" height.

base feed fascias

The examples below are shown with Fabric Base Feed Fascia (Slot Mount) (UNELFB) shown at 41" height.

planning with power spine electrics

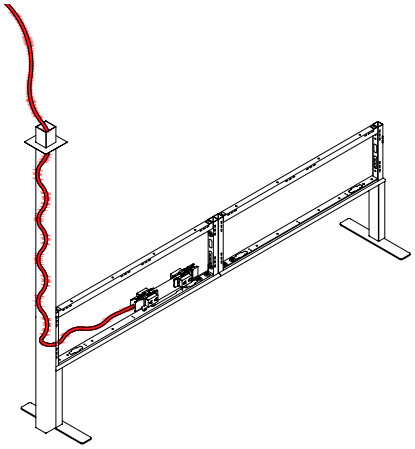

The following should be considered when planning with power spine electrics.

The Power Spine uses standard District electrics.

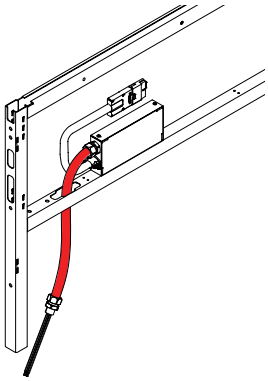

The frame includes the following:
- Specific pass through for data cables with a capacity of 12 CAT6A cables (100% fill rate)
- Standard pass-though for power harnesses
- A cut out on the bottom frame to allow a base feed or ceiling feed to be installed in the interior of the frame

The following demonstrates how power enters Floor Flush, Linear, Zig Zag or 120 Hub Power Spines.

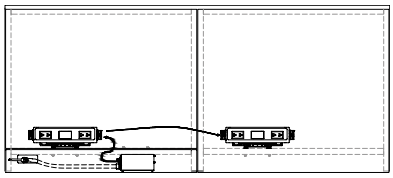

ceiling feed

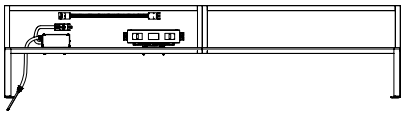

- The liquid cable extends through the cut out in the bottom of the frame, over the foot and into the power pole
- It then routes up to the ceiling

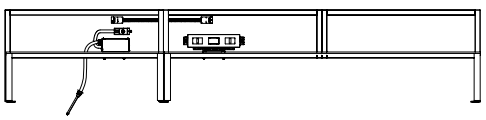

The base feed has a liquid tight cable that extends through the cut out in the bottom of the frame to the floor and remains exposed.

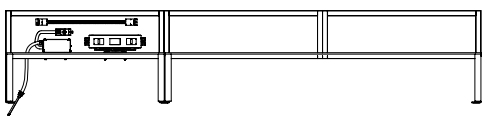

On frame modules 60" wide or wider, both can be placed in the same module.

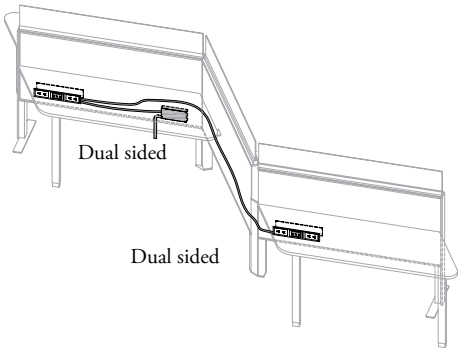

- On frame modules 48" wide the base feed and power module must be placed in separate frame modules

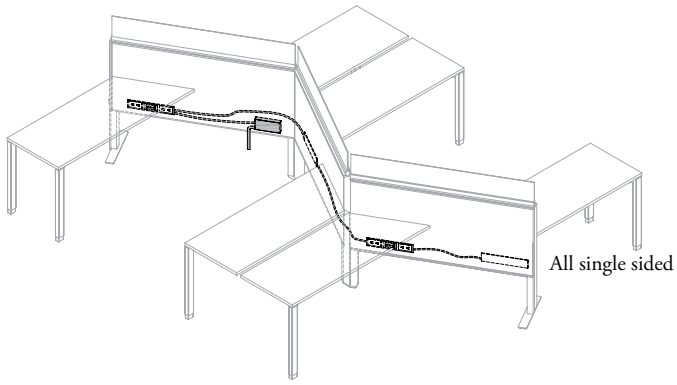

- 48" wide frame modules cannot accommodate both a base feed and power module, there isn't sufficient space for both

planning with power spine electrics (continued)

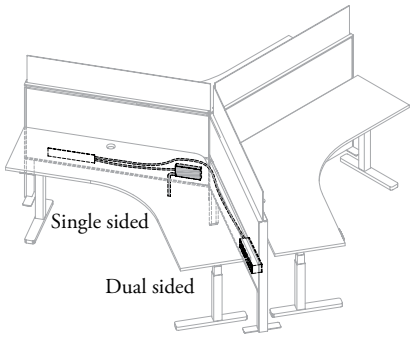

Zig Zag and 120 Hub configurations have specific electrical requirements.

- In Power Spine Zig Zag configurations with parallel worksurfaces, longer harnesses will be required to make up the distance between power boxes
- Routing multiple harnesses through the connections is not recommended

- In Power Spine Zig Zag configurations with dual perpendicular worksurfaces, power access will be limited to one power module for two users
- Parallel planning is best suited for the smaller 48" & 60" modules where Perpendicular planning is better for the larger modules to sufficient back to back space for the users

- When the Power Spine 120 Hub panel modules are 48" wide, the basefeed kit and power box cannot be in the same module
- The base feed will have to be installed on the exterior of the panel

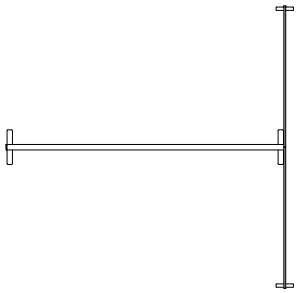

planning with power spine lateral floor screens

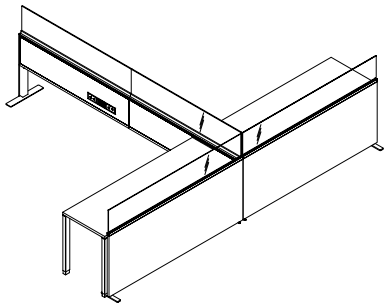

The following should be considered when planning with power spine lateral floor screens in linear applications.

Screens are available in the following configurations.

end mount double, handed

- Screens mount to the end of the spine panel run and extent to the mid point of the frame to provide a clean aesthetic on the outside of the workstations
- End Trim is not required on the panel frame in this application

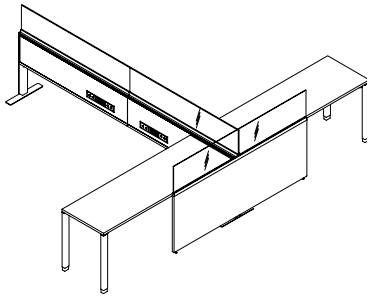

end mound shared, non-handed

- Screen mounts centered on the outside of the panel frame
- End Trim is not required on the panel frame in this application

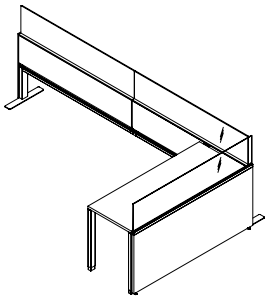

end mount single, handed

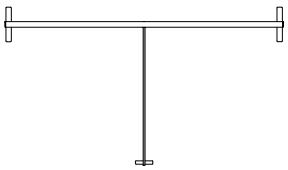

- Screen mounts outside of the panel frame and extends completely across the end of the frame to provide a clean aesthetic to the outside of the workstations in single sided applications

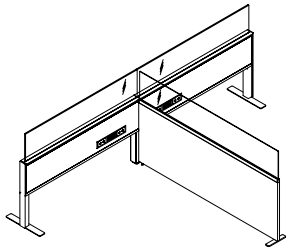

mid spine, handed

- Screen mounts mid run at a location with a support post

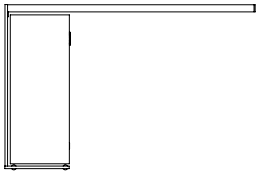

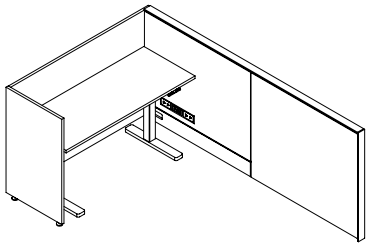

planning with power spine lateral floor screens with return

Handedness is determined by where the bracket is on the screen when the user is facing the workstation.

end mount single, with return

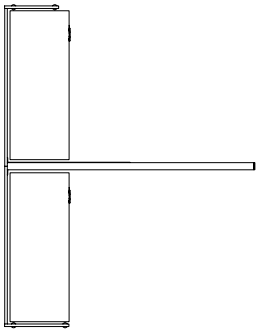

- End mount single (ES) Screen mounts outside of the panel frame and extends completely across the end of the frame to provide a clean aesthetic to the outside of the workstations with a return for added privacy

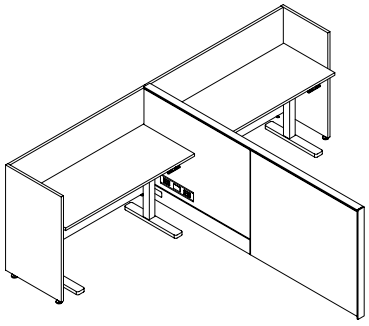

end mount double, with return

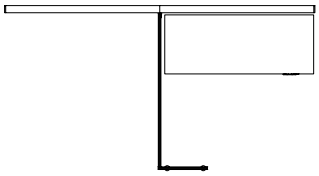

- End Mount Double (EB) Screens mount to the end of the spine panel run and extent to the mid point of the frame to provide a clean aesthetic on the outside of the workstations with returns for added privacy
- End Trim is not required on the panel frame in this application

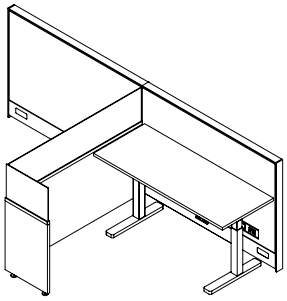

mid spine, with return

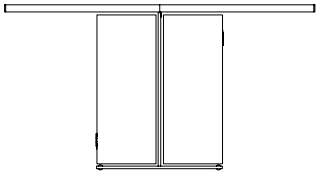

- Mid Spine (MS) Screen mounts mid run at a location with a return determined by handedness

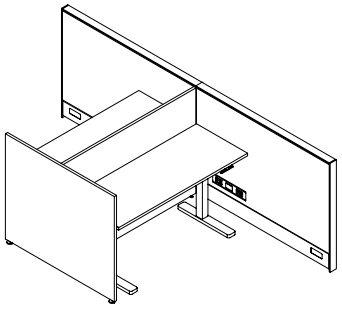

mid spine, shared return

- Mid Spine (MS) Screen mounts mid run at a location with shared return for added privacy

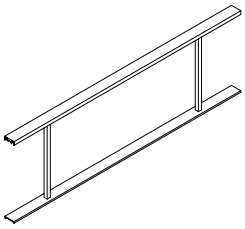

open frame basics

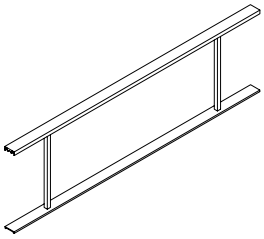

The Open Frame add on is compatible with a Linear or Floor Flush 29" high Power Spine panel or District panels at 29" high. This addition creates a 51" high or 57" datum, with adjustable privacy through the use of the sliding screens.

Open Frame 29" High Panel, Standard (UNAF)

- Datum Heights: 51" (22") or 57" (28")
- Widths: 48" - 96" (6" increments)
- Compatible with Standard Power Spine Panels at 29" high:
  - Linear (UNPZ)
  - Floor Flush (UNFF)
- Compatible with District Power Spine Panels at 29" high:
  - District Flush Panel Wall (UNPRF)
  - District Elevated Panel Wall (UNPER)
  - Convertible Panel Wall (UNPC)
- Not compatible with 96" Linear or Floor Flush Power Spine
- Four configurations:
  - Beginning (B)
  - Middle (M)
  - Finish (F)
  - Complete (C)

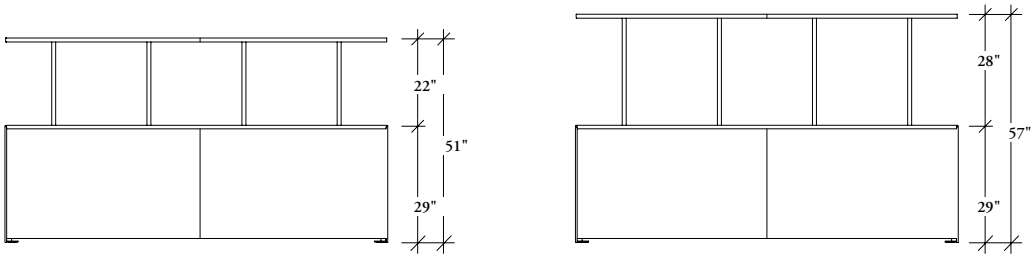

Open Frame 29" High Panel, Inset (UYAF)

- Datum Heights: 51" (22") or 57" (28")
- Widths: 48" - 96" (6" increments)
- Compatible with Power Spine Inset Panels at 29" high:
  - Linear (UYPZ)
  - Floor Flush (UYFF)
- Compatible with District Inset Panels at 29" high:
  - District Flush Panel Wall with Inset (UYPFR)
  - District Elevated Panel Wall with Inset (UYPER)
  - Convertible Panel Wall with Inset (UYPCR)
- Not compatible with 96" Linear or Floor Flush Power Spine
- Four configurations:
  - Beginning (B)
  - Middle (M)
  - Finish (F)
  - Complete (C)

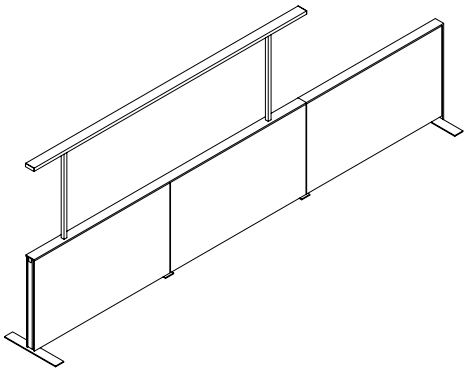

planning with open frames

The following should be considered when planning with Open Frame.

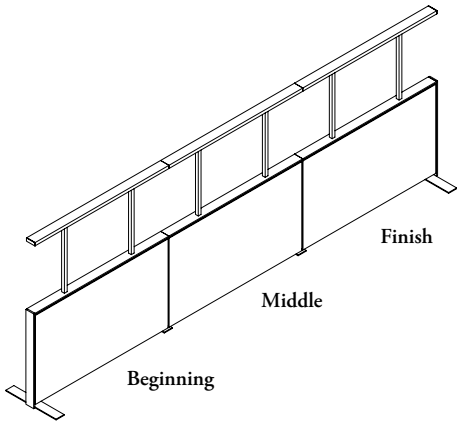

The Open Frame is available in two heights to have a 51" high datum or 57" high datum.

Open Frame can be specified as a complete frame or linked together to form longer runs.
To create a longer span a combination beginning, middle and finish can be specified.

Complete open frame on a 192" width Floor Flush Power Spine.

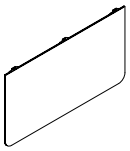

Beginning, Middle, Finish in a 180" width Power Spine.

sliding screen basics

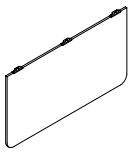

The Sliding Screens for Open Frame add in the flexible privacy feature to the Open Frame.

Sliding Fabric for Open Frame (UNXF)

- Height: 14", 20", 26"
- Width: 23" - 53" (3" increments)
- Not all panel and upholstery fabric are available. For more information, see the *Textiles Program Guide*

Sliding Smooth Felt Screen for Open Frame (UNZF)

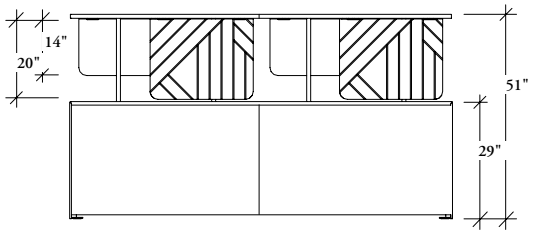

- Height: 14", 20", 26"
- Width: 23"- 53" (3" increments)
- Available in all Smooth Felt color options
- Optional Diagonal Pattern on one side

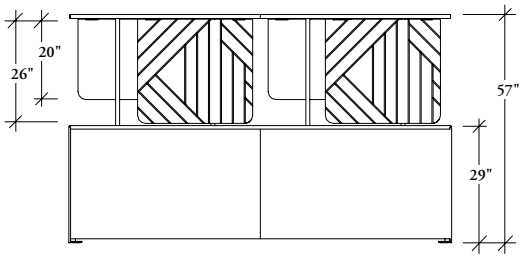

planning with sliding screens

The following should be considered when planning with Sliding Screens for Open Frame.

The Sliding Screens for Open Frame add in the flexible privacy feature to the Open Frame.

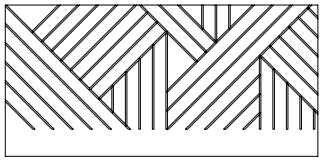

The Screens are available in Smooth Felt or Fabric materials.

- The recommended screen sizes for each panel width has an approximate 6" overlap (example: for a 72" wide panel, should have with two dividers at 41" wide)
- The pattern on the Smooth Felt sliding screen can be placed on either of the two sliding tracks of an Open Frame and can be adjusted on site

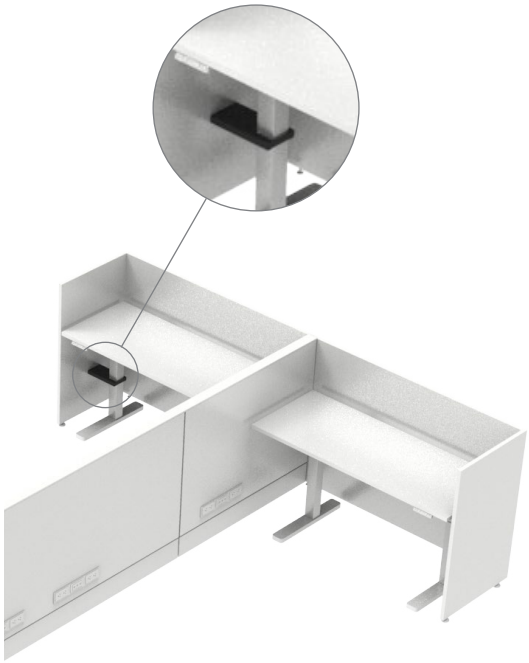

Sliding Screen is available with a diagonal pattern.

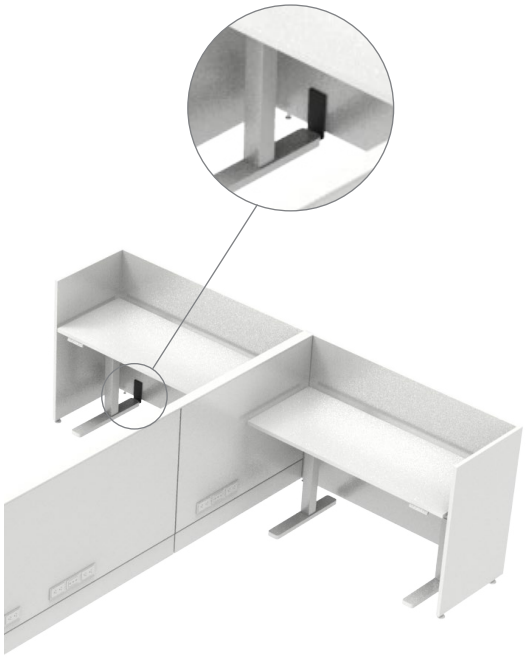

Diagonal

bracket & anchor for height-adjustable table basics

Height-Adjustable Tables tether to a lateral screen with the use of the Bracket or Anchor.

Anchor for Height-Adjustable Table (UZAS)

- An anchor to tether a hiSpace/Navigate Height-Adjustable Table to the return of a lateral screen
- Anchor Options:
  - hiSpace (H)
  - hiSpace Slide (S)
  - hiSpace (6" frame reduction) (F)
  - hiSpace Slide (6" frame reduction) (G)
  - Navigate (N)
- Installed on-site
- Not compatible with worksurfaces with desk-mounted screens

Bracket for Height-Adjustable Table (UZBS)

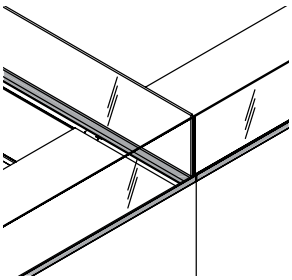

- A bracket to tether a hiSpace/Navigate Height-Adjustable Table to a lateral screen from the foot of the table
- Bracket Options:
  - hiSpace (H)
  - hiSpace Slide (S)
  - hiSpace Round Leg (R)
  - Navigate 23" Depth/ 29" Depth (N)
  - Navigate 35" Depth (P)
- Installed on-site
- Not compatible with worksurfaces with desk-mounted screens

planning with power spine lateral floor screens datum heights

- Lateral screens are available with two datum height options for the glass:
  - from 29"
  - from 42"
- Can be used on either Power Spine Panel or Power Spine Inset Panel with inset glass depending on the application

29" high panel walls

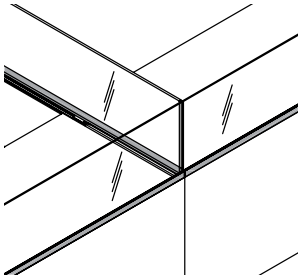

- Panel Wall Add-On Screen - Glass has a 2" high metal frame bringing the glass datum height to 31" high when mounted to a panel
- It is recommended that the 31" glass option be selected for the Lateral Screen so that the datum heights align

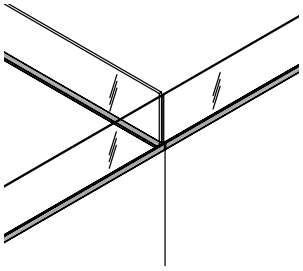

Recommended Lateral Screen: 31" high solid with 11" glass.

29" and 42" high power spine with panel glass blade for panels with inset glass

- Inset Panel Wall Add-On Screen - Glass has no metal frame so the datum height remains at 29" or 42" high when mounted to a panel
- It is recommended that the 29" glass option be selected for the Lateral Screen when used with the 29" high panel and 42" high glass option be selected when used with the 42" high option

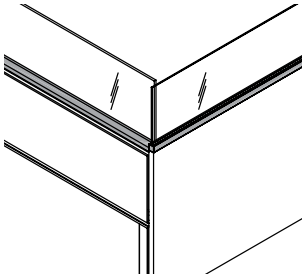

Recommended Lateral Screen: 29" high solid with 13" glass.

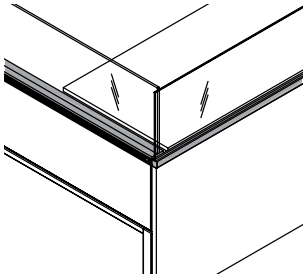

Recommended Lateral Screen: 42" high solid with 9" glass.

Two height options can be used in single sided applications with Add-On Screens on 29" high panels depending on the desired aesthetic.

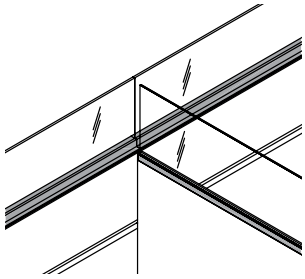

Lateral screen with 31" high solid and glass above:
- the solid part of the screen and the solid part of the glass add-on trim will align

Lateral screen with 29" high solid and glass above:
- the solid part of the screen and the top of the panel will align

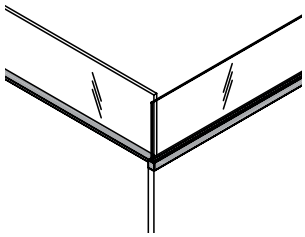

planning with power spine lateral floor screens datum heights (continued)

mid run applications

- In mid run applications it is recommended that the 29" high lateral screen with glass above be used
- This aligns the solid portion of the lateral screen or with the top of the panel frame eliminating unnecessary height changes an gaps

42" high panel walls

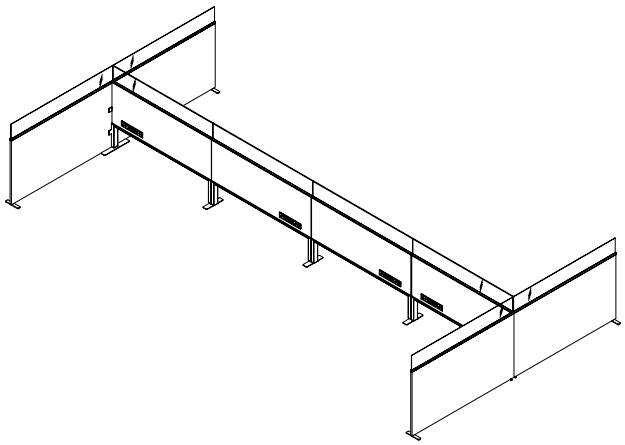

Only one option is available for adding glass to a 42" high panel

- Inset Glass Screen (the glass is inset, so no trim is visible, the datum height remains at 42")

Lateral Floor Screens provide support to panels when

- The maximum number of panel sections is four and the overall length does not exceed 192" (ex. 4 x 48" sections = 192"
- Reminder: panels over 60"w. consist of two panel sections, so 2 x 48"w sections is the equivalent of 1 x 96"w panel
- The maximum number of panels sections is three when 60"w. panels are used and the overall length does not exceed 180" (ex. 3 x 60" sections - 180")
- Panel heights to do not exceed 51"h.

power spine worksurface understanding

District Power Spine provides a variety of worksurfaces and worksurface support bundles for Floor Flush, Linear and 120 planning. The following outlines the features of District Power Spine worksurfaces and Worksurface Support bundles.

District Worksurfaces for Power Spine Panels are available in a variety of styles for both height-adjustable and fixed applications.

rectangular

Rectangular worksurfaces can be applied in Floor Flush, Linear and Zig Zag Perpendicular and Parallel planning.

dual angled and 120 angled

Angled worksurfaces can be applied in Zig Zag Perpendicular and 120 Hub planning.

parallelogram

Parallelogram worksurfaces can be applied in Zig Zag Perpendicular and 120 Hub planning.

120 hub

120 Hub Worksurfaces can be applied 120 Hub planning.

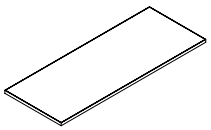

power spine worksurface & worksurface support basics

The Rectangular Worksurface and Support bundle is used in Floor Flush, Linear and Zig Zag applications.

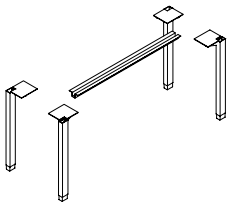

Finishes:

- Worksurface Finishes:
  - Foundation Laminate
  - Flintwood
  - Natural Veneer
- Grommet Finishes
  - Storm White
  - Espresso
  - Platinum
  - Very White
- Support Finishes:
  - Foundation Colors
  - Mica Colors
  - Accent Colors

Power Spine Rectangle Worksurface (UZWE)

- Depths: 24", 30"
- Widths: 48", 54", 60", 66" 72"
- Edge:
  - (8) Flat
  - (H) Full Knife
- Optional grommets
- Applications:
  - (A) Freestanding - four legs
  - (B) Perpendicular (panel mounted) - two legs

Power Spine Rectangular Worksurface Support Bundle (UZWC)

- Used with the Power Spine Rectangle Worksurface.
- Depths: 24", 30"
- Widths: 48", 54", 60", 66", 72"
- Leg Type:
  - (L) Standard Leg
- Includes legs, mounting brackets and reinforcement channels depending on application
- Applications:
  - (A) Freestanding - four legs
  - B) Perpendicular - two legs, two brackets

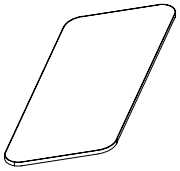

power spine worksurface and worksurface support basics (continued)

The Parallelogram Worksurface and Support Bundle for Zig Zag and 120 Hub planning for semi-supported applications.

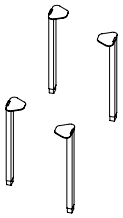

Finishes:

- Worksurface Finishes:
  - Foundation Laminate
  - Flintwood
  - Natural Veneer
- Grommet Finishes
  - Storm White
  - Espresso
  - Platinum
  - Very White
- Support Finishes:
  - Foundation Colors
  - Mica Colors
  - Accent Colors

Power Spine Parallelogram Worksurface (UZWP)

- Depths: 24", 30"
- Widths: 48", 54", 60", 66", 72"
- Edge:
  - (8) Flat
  - (H) Full Knife
- Optional grommets
- Handedness:
  - (LH) Left Hand
  - (RH) Right Hand
- Applications:
  - (A) Freestanding - four legs
  - (C) Perpendicular - two legs
  - (D) Parallel - one legs

Power Spine Parallelogram Worksurface Support Bundle (UZWK)

- Used with the Power Spine Rectangle Worksurface.
- Depths: 24", 30"
- Widths: 48", 54", 60", 66", 72"
- Handedness:
  - (LH) Left
  - (RH) Right
- Leg Type:
  - (C) Standard Leg for Curved Radius
- Applications:
  - (A) Freestanding - four legs
  - (C) Parallel - two legs, two brackets
  - (D) Perpendicular - one legs, three brackets

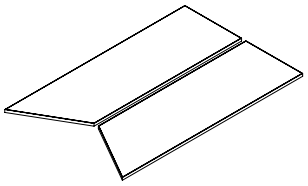

power spine worksurface and worksurface support basics (continued)

The Dual 120 Angled Worksurface and Support Bundle for 120 Zig Zag Perpendicular planning for semi-supported applications.

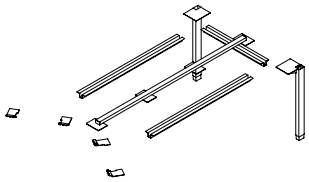

Finishes:

- Worksurface Finishes:
  - Foundation Laminate
  - Flintwood
  - Natural Veneer
- Grommet Finishes
  - Storm White
  - Espresso
  - Platinum
  - Very White
- Support Finishes:
  - Foundation Colors
  - Mica Colors
  - Accent Colors

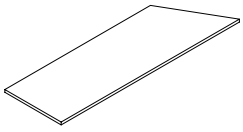

Power Spine Dual 120 Angled Worksurface (UZWD)

- Depths: 48", 60"
- Widths: 48", 54", 60", 66", 72"
- Edge:
  - (8) Flat
- Optional grommets
- Applications:
  - Perpendicular - two legs
- Includes two angled worksurfaces

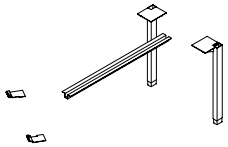

Power Spine Dual Angled Worksurface Support Bundle (UZDK)

- Used with the Power Spine Rectangle Worksurface
- Depths: 48", 60"
- Widths: 48", 54", 60", 66", 72"
- Leg Type:
  - (L) Standard Leg
- Applications:
  - (B) Perpendicular - two legs, two brackets

Power Spine Angled Worksurface (UZWA)

- Depths: 24", 30"
- Widths: 48", 54", 60", 66", 72"
- Edge:
  - (8) Flat
  - (H) Full Knife
- Optional grommets
- Handedness:
  - (LH) Left Hand
  - (RH) Right Hand
- Applications:
  - (B) Perpendicular - two legs
  - (D) Parallel - one leg

Power Spine Angled Worksurface Support Bundle (UZWB)

- Used with the Power Spine Rectangle Worksurface.
- Depths: 24", 30"
- Widths: 48", 54", 60", 66", 72"
- Handedness:
  - (LH) Left
  - (RH) Right
- Leg Type:
  - (L) Standard Leg
- Applications:
  - (B) Perpendicular - two legs, two brackets
  - D)Parallel - one leg, three brackets
- Leg Type:
  - (L) Standard Leg
- Applications:
  - (B) Perpendicular - two legs, two brackets
  - (D) Parallel - one leg, three brackets

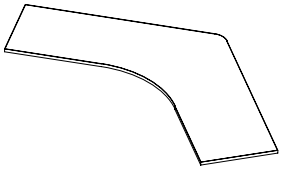

power spine worksurface and worksurface support basics (continued)

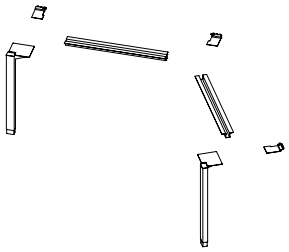

120 Hub Corner Worksurface to be supported by two legs and three brackets.

  - Accent Colors

Power Spine 120 Hub Worksurface (UZWT)

- Depths: 24", 30"
- Widths: 48", 60"
- Edge:
  - (8) Flat
  - (H) Full Knife
- Optional grommets
- Applications:
  - (E) Semi-Supported - two legs

Power Spine 120 Hub Worksurface Support Bundle (UZWW)

- Used with the Power Spine Rectangle Worksurface.
- Depths: 24", 30"
- Widths: 48", 60"
- Leg Type:
  - (L) Standard Leg
- Applications:
  - (E) Semi Supported - two legs

planning with power spine worksurface

The following should be considered when planning with Power Spine Worksurfaces.

The support configuration for fixed worksurfaces varies depending on the worksurface style and mounting condition.

freestanding planning

4x legs on all corners.

perpendicular applications

- Two legs on one end of the worksurface
- Two brackets on the opposite end (attached to panel)

parallel applications

- Two legs on the front side of the worksurface
- Two brackets on the panel side (attached to panel)

parallel and 120 hub applications

- One leg on the corner of the worksurface
- Three brackets on the panel side (attached to panel)

Knife Edges on worksurfaces will vary depending on the worksurface type and application.

rectangular, angled and parallelogram

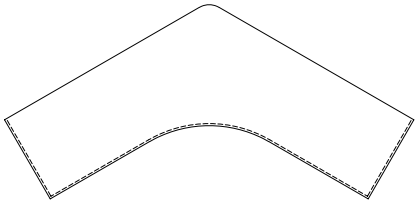

Four knife edges

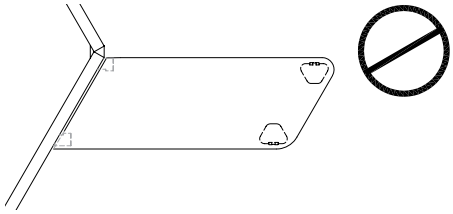

Three knife edges

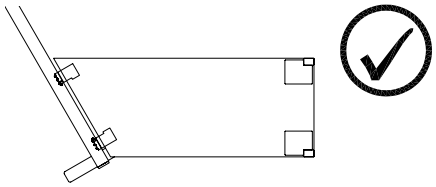

120 hub

Three knife edges

Parallelogram worksurfaces **cannot** be used for perpendicular planning, Angled Worksurfaces should be used.

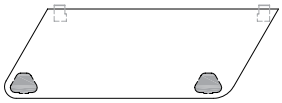

Parallelogram worksurfaces have radiused corners, the amount is determined by the application.

four legs (freestanding)

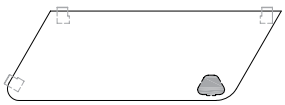

All corners are radiused.

two legs and two brackets

Two corners are radiused.

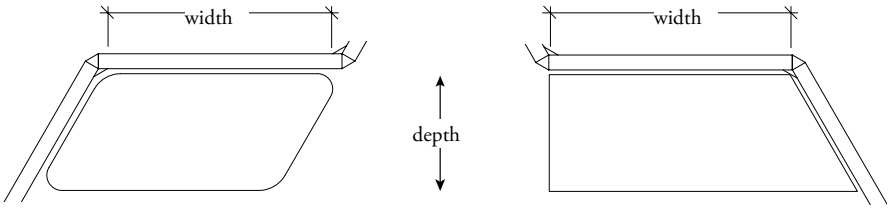

one leg and three brackets

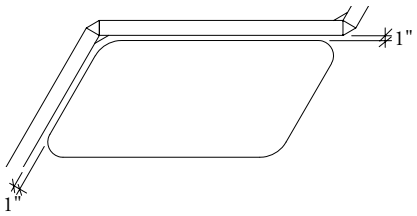

Two corners are radiused.

planning with power spine worksurface (continued)

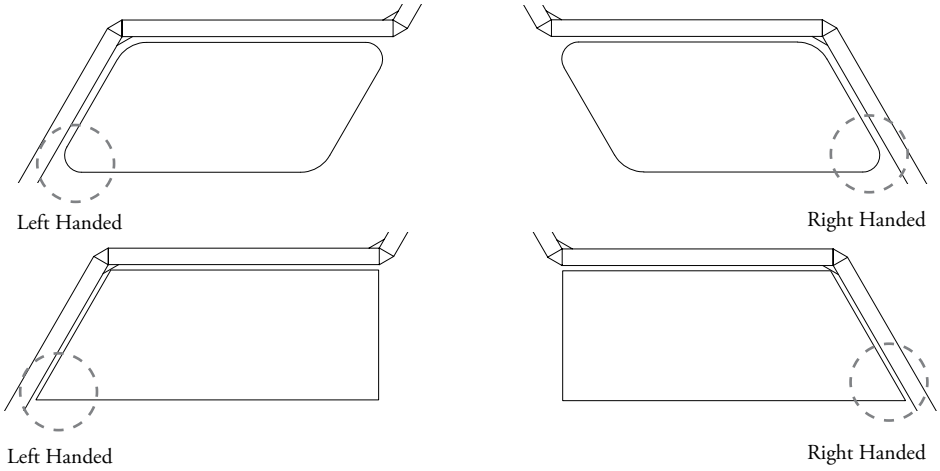

The depth and width of Angled and Parallelogram worksurfaces is determine by the following:
- The nominal depth is the distance from the user edge to the face of the panel
- The nominal width matches the width of the panel that the worksurface sits in front of

All Angled, Parallelogram and 120 Hub Semi-Suspended Worksurfaces follow the District worksurface protocol and have a 1" gap on all panel facing sides.

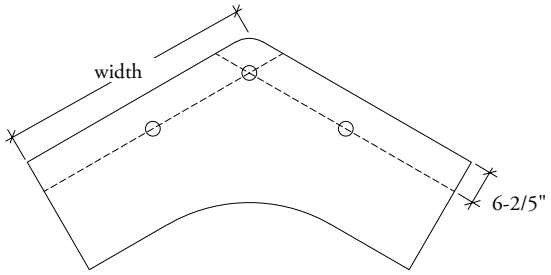

Angled and Parallelogram worksurfaces are handed.
- The handedness is determined by the location of the acute angled corner from the users perspective

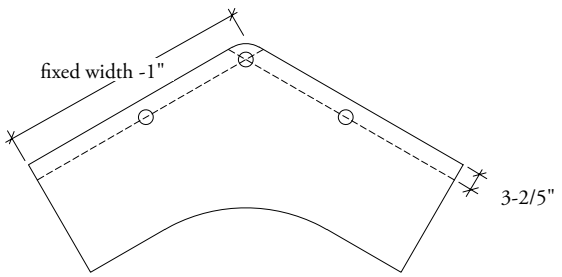

The 120 Hub Worksurface has slight differences depending on whether it's use fixed or height adjustable.

- The width on height-adjustable surfaces is 1" less on each side
- The grommet locations are different:
  - The fixed worksurface grommets are inset 6-2/5" on center
  - The height-adjustable worksurface grommets are inset 3-2/5"

fixed

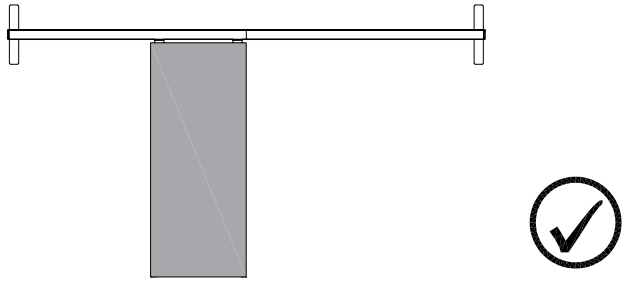

height-adjustable

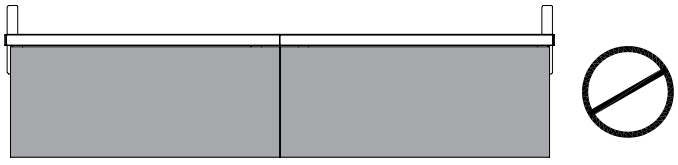

planning with power spine rectangle worksurface

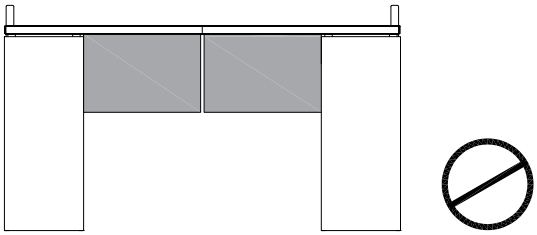

The following should be considered when planning with rectangular worksurfaces and support kits in linear applications.

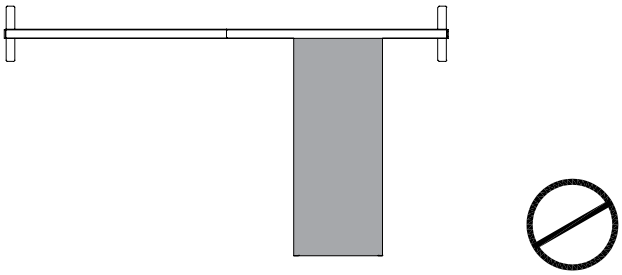

Worksurfaces mount perpendicular to the Power Spine Panel.

Worksurfaces **cannot** be mounted parallel to the panels.

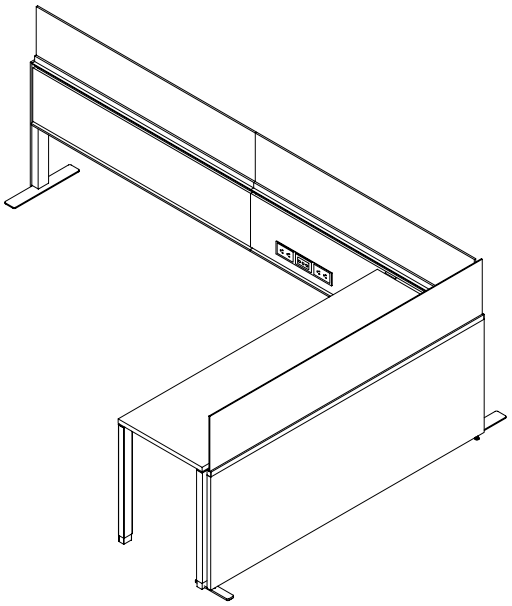

Worksurfaces **cannot** be used as a return worksurface.

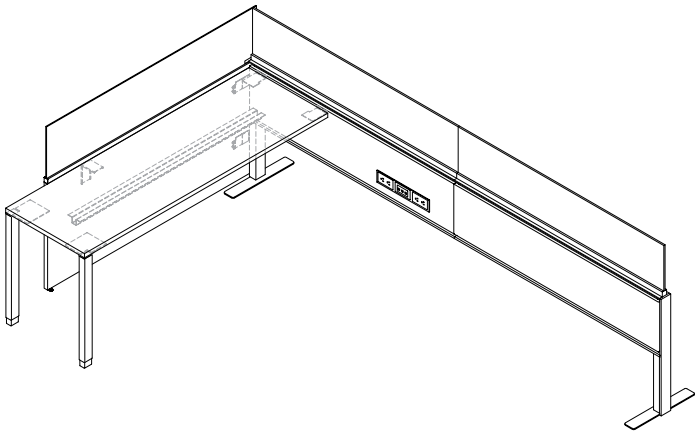

Off module planning
• For 48" and 60" frame modules, worksurfaces **cannot** be planned off module.

planning with power spine rectangle worksurface (continued)

When planning with lateral screens and semi-suspended worksurfaces the screens can be planned in two ways:

- Attached to the panel and not the worksurface
  - a foot is required on screens 48" wide or wider
- Semi-suspended worksurfaces **cannot** be used with 42"H panels
- Semi-suspended worksurfaces **cannot** be used with inset panels

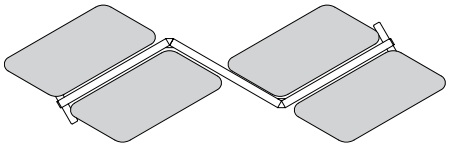

- The worksurface mounted screen has fixed bracket locations, the width of the screen must be equal to or smaller than the width of the worksurface
- Not designed to support the worksurface

planning with power spine zig zag panel & worksurfaces

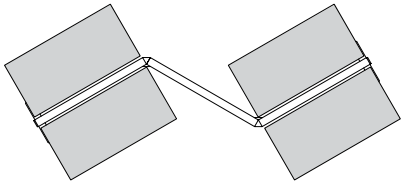

The following should be considered when planning with Zig Zag worksurfaces and support kits in linear applications.

Zig Zag Power Spine panels can accept a variety of worksurface types.

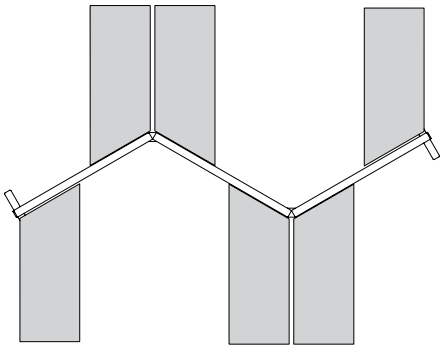

single parallelogram worksurfaces

single rectangular worksurfaces

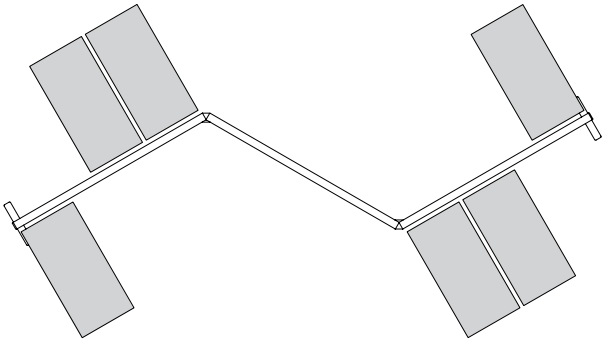

single and dual angled and dual angled worksurfaces

The recommended worksurface size is 72".

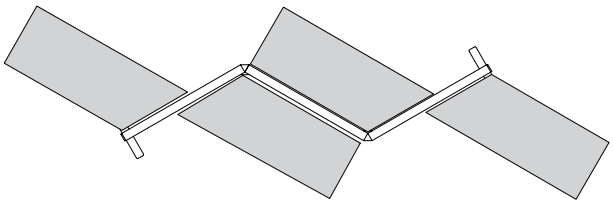

single and dual rectangular worksurfaces

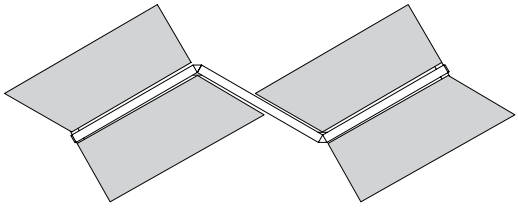

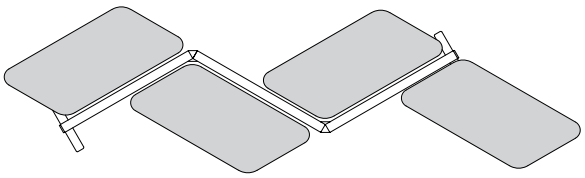

The recommended worksurface size is 72".

Recommended worksurface sizes for Perpendicular Planning Power Spine Zig Zag Panels is 72" wide.

The following recommendations are not recommended.

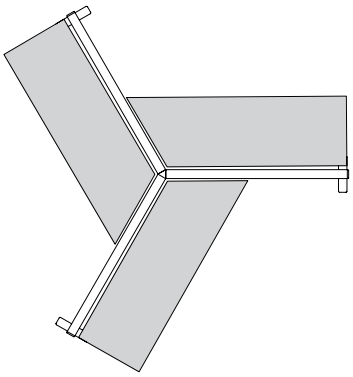

Not optimal use of space, only if freestanding desks required.

planning with power spine 120 hub & worksurfaces

The following should be considered when planning with 120 Hub Worksurfaces and support kits in linear applications.

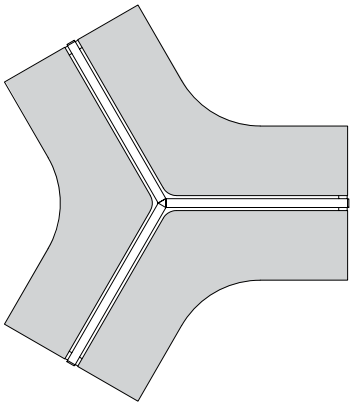

120 Hub Power Spine panels can accept a variety of worksurface types.

angled worksurfaces

Planning with Angled Worksurface Semi-Suspended only.

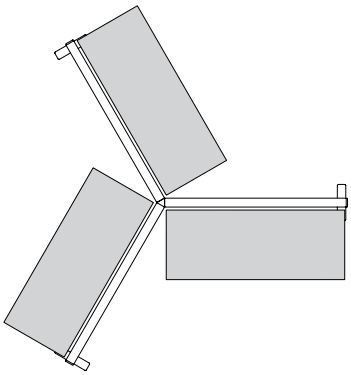

120 hub worksurfaces

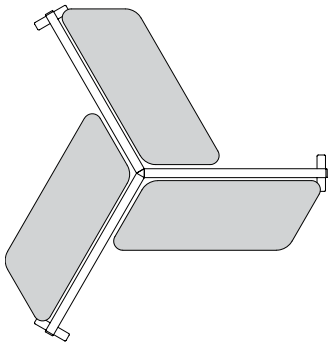

Planning with Classic Hub Worksurface Height-Adjustable, Semi-Suspended.

Acceptable Planning (with some drawbacks).

rectangular worksurfaces

Rectangular - Semi Suspended or Freestanding Limited legs space.

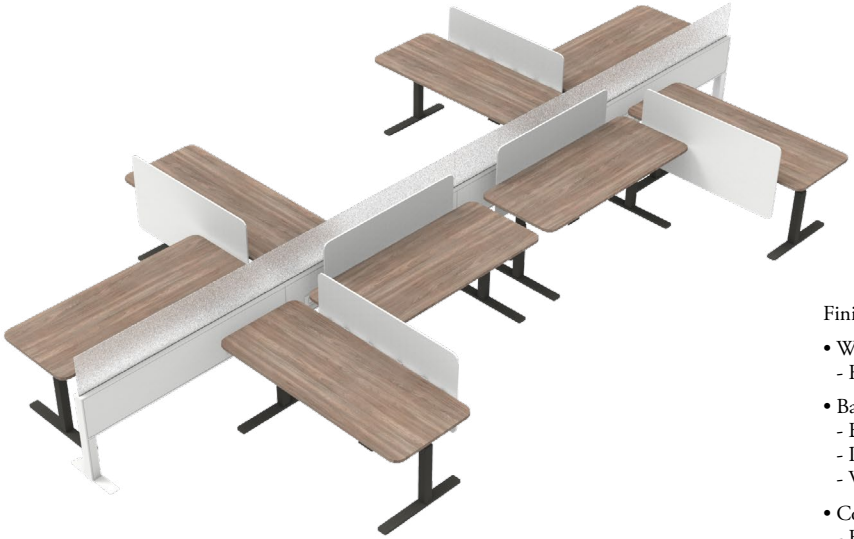

Rectangular Height-Adjustable, or Freestanding Creates gaps between Worksurface and panel.

power spine hispace quick connect table basics

Quick Connect Tables can be easily integrated into Power Spine configurations.

The Power Spine Quick Connect table has all of the same features as Quick Connect tables, available in Complements: *Teknion's Ergonomics & Accessories Program.*

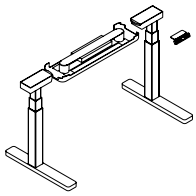

rectangular

Finishes:

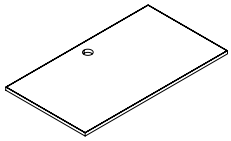

- Worksurface Finishes:
  - Foundation Laminate
- Base Finish:
  - Ebony
  - Platinum
  - Very White
- Connection Kit Finish:
  - Ebony
  - Platinum
  - Very White

- Bases and tops are ordered separately and must be the same size
- Depths: 23", 29"
- Widths: 52" 58" 64", 70"
- Orientations:
  - Spine Front & Centered for parallel (C) (only available for 52" wide)
  - Spine Left for Perpendicular (L)
  - Spine Right for Perpendicular (R)
- Base Mechanisms:
  - Extended electric (22.6" - 48.7")
- All configurations allow for desk edge screens
- Same Kit of Parts can adjust to fit all planning applications for:
  - Perpendicular, Frame Inset Left
  - Perpendicular, Frame Inset Right
  - Parallel, Frame Centered

  - Full Knife Trim

planning with power spine hispace quick connect table

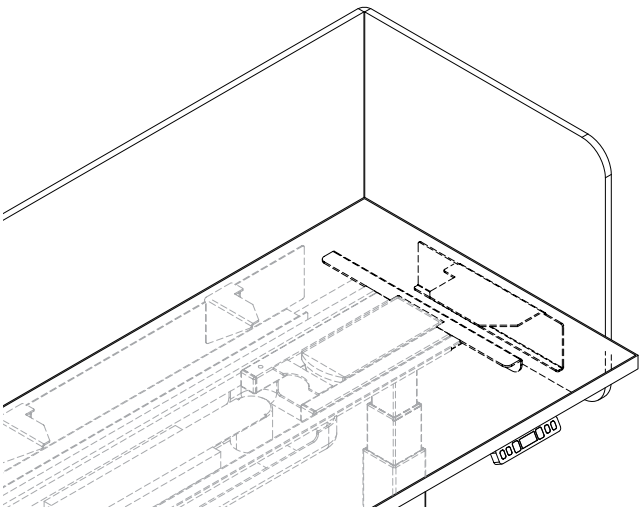

The following should be considered when planning with Power Spine hiSpace Quick Connect Height-Adjustable Freestanding Table.

- The leg of the hiSpace Quick Connect base can be repositioned to allow for reconfiguration
- It can be adjusted up to 3", to allow approximately 7" overhang on the worksurface

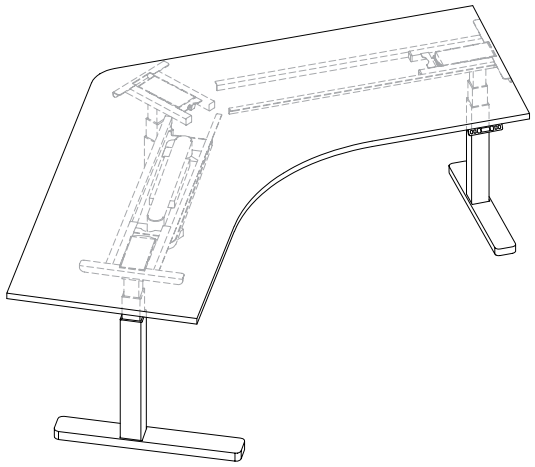

Adjusting the leg position will also create a 9" leg clearance to avoid interference with the power spine panel leg.

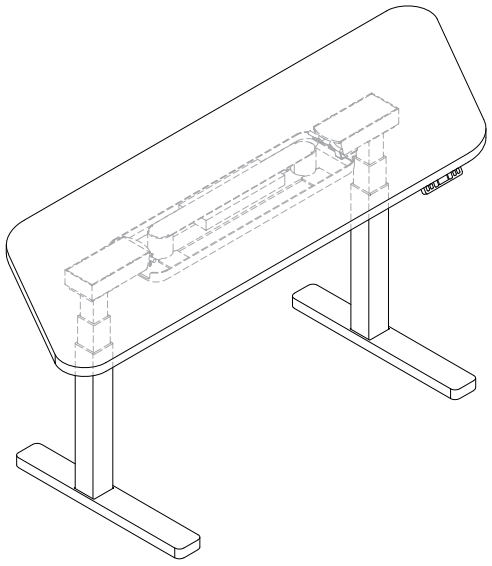

Regardless of the leg position, edge mounted screens will always fit.

planning with power spine hispace quick connect table (continued)

The following should be considered when planning with Power Spine three legged and Parallelogram hiSpace Quick Connect Height-Adjustable Freestanding Tables.

Under surface Cable Manager not available on 46" width.

Under surface Cable Manager (YSB) not available on 60" width.

understanding screens

District provides a variety of screens for space division in panel wall and freestanding applications. They provide visual and territorial privacy and a lighter aesthetic than a panel wall in areas where shielded wire management is not required.

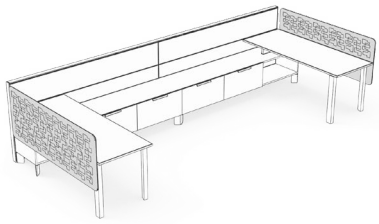

desk edge screens

Desk Edge Screens are available in five styles:
- Solid and Glass
- Infinity fabric, straight and curved
- Framed fabric
- Smooth Felt
- Desk Edge Screen with Glass

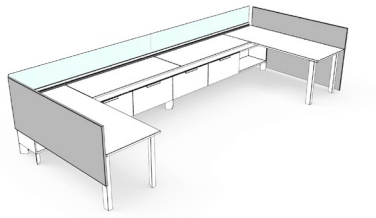

Solid and Glass Desk Edge Screens

- Mounts on- or off-module to the edge of single return worksurfaces
- Provides privacy at 42"h, 51"h and 57"h
- Available in glass at two modesty heights

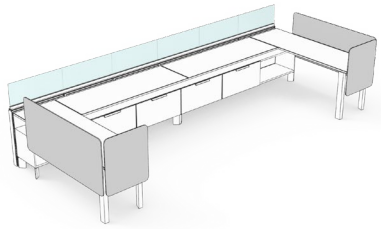

Infinity Desk Edge Screens, Desk Edge Floor Screens and Side Desk Edge Screens

- Attaches to worksurfaces to provide a lightweight, thin upholstered fabric screen
- Provides privacy at 42"h, 51"h and 57"h
- Provides a softer curvilinear aesthetic
- Creates space division and local desktop privacy at various heights

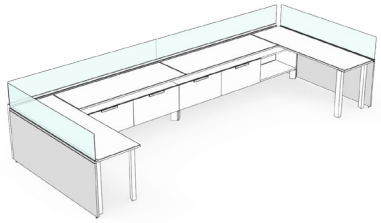

Framed Fabric Desk Edge Screens, Desk Edge Floor Screens and Side Desk Edge Screens

- Attaches to worksurfaces to provide an upholstered fabric screen
- Provides privacy at 42"h, 51"h and 57"h
- Is outlined by a frame
- Creates space division and local desktop privacy at various heights above and below the worksurface

Smooth Felt Desk Edge Screens

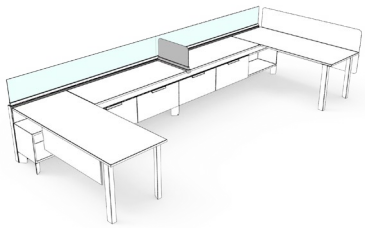

- Attaches to worksurface to provide privacy
- Create space division at 42"h and 51"h
- A smooth felt screen with an lightweight aesthetics
- Available in Complements: *Teknion's Ergonomics & Accessories Program*

Desk Edge Screen with Glass

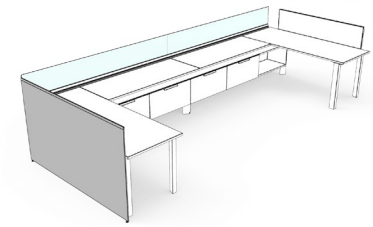

- A screen that is solid at the bottom and glass at the top
- 42", 51" and 57" heights with options for glass starting from desk height

understanding screens (continued)

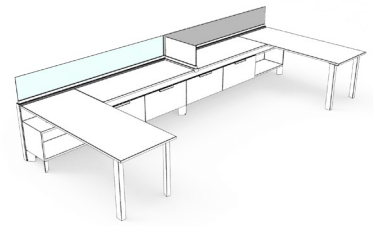

lateral screens

- Desktop Lateral screens attach to a worksurface to provide lateral space division
- Metal finish screens provides privacy at 51"h and other finishes provide privacy at 42"h, 51"h and 57"h
- Available in a variety of finishes:
  - Glass
  - Writable glass
  - Laminate
  - Writable laminate
  - Fabric
  - Metal
  - Smooth Felt

floor screens

- Floor Screens provide complete privacy by mounting on- or off-module to the back of a worksurface and extending to the floor
- Provides privacy at 42"h, 51"h and 57"h

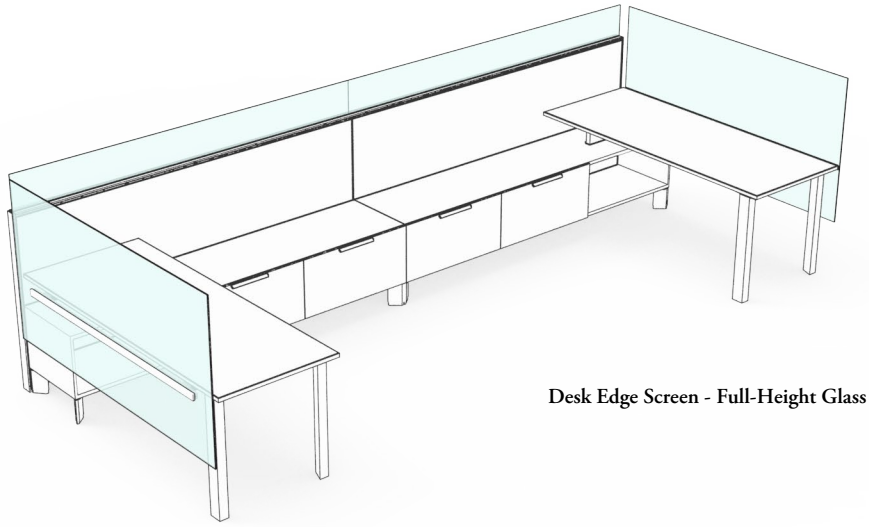

panel wall add-on screens

- Panel Wall Add-On Screens provide light, frameless privacy by mounting on- or off-module to to a panel wall and offer an alternative to high panels with windows.

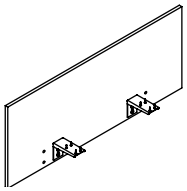

desk edge screen basics

Desk Edge Screens can be used on Freestanding or Panel Mounted Worksurfaces to provide visual privacy.

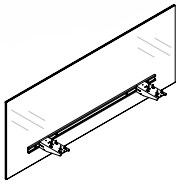

Desk Edge Screen - Full-Height Glass shown

desk edge screens

Desk Edge Screen (UNSDE)

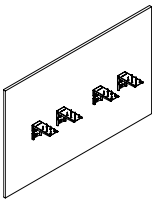

- Heights:
  - 13" for a 42"h datum
- Widths: 23" to 96" in 1" increments
- Finishes:
  - Source Laminate
  - Flintwood
  - Natural Veneer

Desk Edge Screen – Glass (UNSDEG)

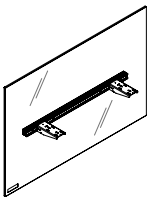

- Heights:
  - 13" for a 42"h datum
- Widths: 23" to 96" in 1" increments
- Finishes:
  - Glass

full-height desk edge screens

Desk Edge Screen – Full-Height (UNSFDE)

- Heights:
  - 13" (Overall height 30.4") to provide a 42"h datum
  - 22" (Overall height 37") to provide a 51"h datum
  - 28" (Overall height 43") to provide a 57"h datum
- Widths: 23" to 96" in 1" increments
- Modesty Base Heights:
  - -15" Modesty
- Finishes:
  - Source Laminate
  - Flintwood
  - Natural Veneer

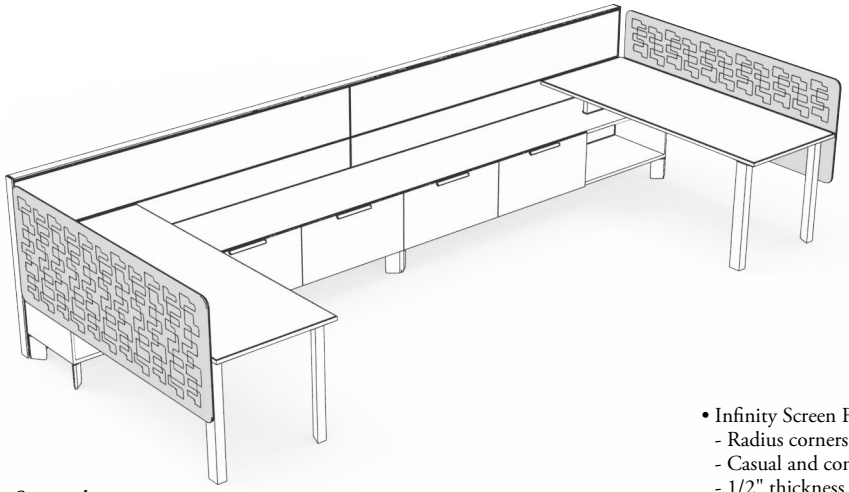

Desk Edge Screen – Full-Height Glass (UNSFDG)

- Heights:
  - 13" to provide a 42"h datum
  - 22" to provide a 51"h datum
  - 28" to provide a 57"h datum
- Widths: 23" to 96" in 1" increments
- Finishes:
  - 10mm thick etched tempered glass
  - Standard Frost

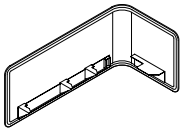

desk edge screen basics (continued)

infinity screens

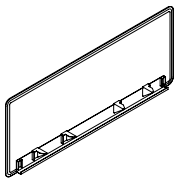

Quilted Infinity Desk Edge Screen shown

- Infinity Screen Features:
  - Radius corners
  - Casual and continuous corner applications
  - 1/2" thickness
  - Non-tackable
- Available in select panel and upholstery fabric, refer to the *Teknion Textiles Program Guide*

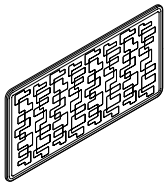

Infinity Curved Desk Edge Screen (GXCD)

- Depths: 20"
- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
  - 28" for a 57"h datum
- Widths: 24" to 60" in 6" increments
- Modesty Base Heights:
  - 23" Partial Modesty
  - 15" Modesty
- Wire Manager is available

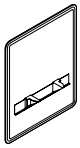

Infinity Desk Edge Screen (GXDD)

- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
  - 28" for a 57"h datum
- Widths: 36" to 72" in 1" increments
- Modesty Base Heights:
  - 23" Partial Modesty
  - 15" Modesty
  - 6" Elevated
- Wire Manager is available

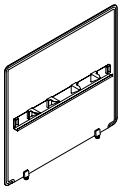

Quilted Infinity Desk Edge Screen (GQDD)

- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
- Widths: 36" to 72" in 6" increments
- Modesty Base Heights:
  - 23" Partial Modesty
  - 15" Modesty
- Two Quilted Patterns:
  - Diode
  - Pico
- Wire Manager is available

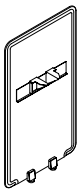

Infinity Side Desk Edge Screen (GXSD)

- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
- Widths: 18" to 36" in 6" increments
- Modesty Base Heights:
  - 23" Partial Modesty
  - 15" Modesty
  - 6" Elevated

Infinity Desk Edge Floor Screen (GXFD)

- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
- Widths: 36" to 72" in 1" increments
- Modesty Base Height: 1" Floor

Infinity Side Desk Edge Floor Screen (GXED)

- Depths: 24", 30", and 36"
- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
- Modesty Base Height: 1" Floor

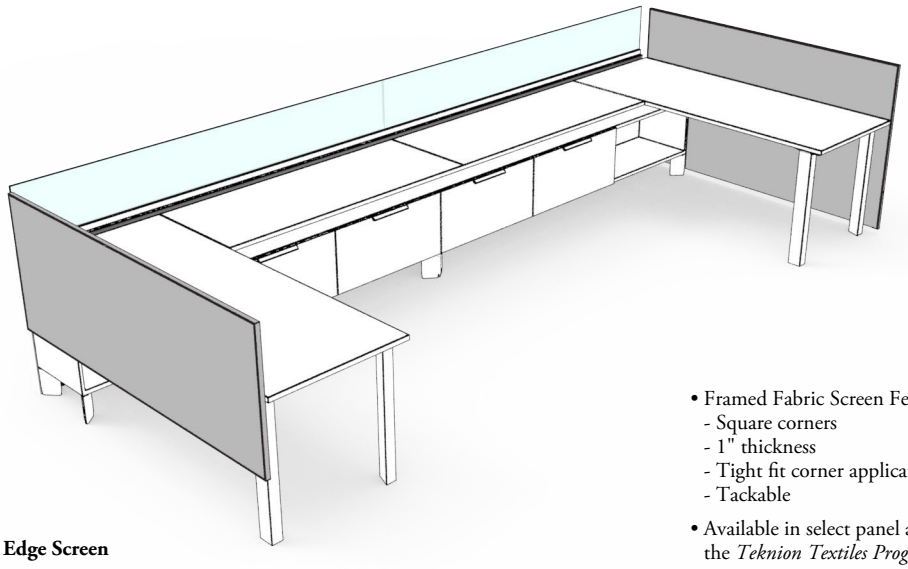

Infinity Screen Alignment Clip (GXCC)

- Used to clip Infinity screens together in side-by-side applications

desk edge screen basics (continued)

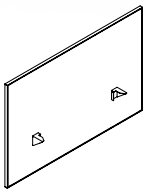

framed fabric screens

Framed Fabric Desk Edge Floor Screen shown

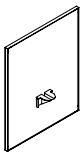

Framed Fabric Desk Edge Screen shown

- Framed Fabric Screen Features:
  - Square corners
  - 1" thickness
  - Tight fit corner applications
  - Tackable
- Available in select panel and upholstery fabric, refer to the *Teknion Textiles Program Guide*

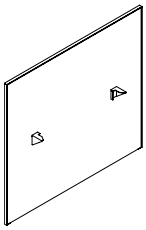

Framed Fabric Desk Edge Screen (GYDD)

- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
  - 28" for a 57"h datum
- Widths: 36" to 72" in 1" increments
- Modesty Base Heights:
  - 23" Partial Modesty
  - 15" Modesty
  - 6" Elevated (not available at 57"h datum)

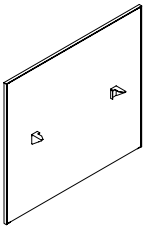

Framed Fabric Side Desk Edge Screen (GYSD)

- Depths: 18" to 36" in 6" increments
- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
  - 28" for a 57"h datum
- Modesty Base Heights:
  - 23" Partial Modesty
  - 15" Modesty
  - 6" Elevated (not available at 57"h datum)

Framed Fabric Desk Edge Floor Screen (GYFD)

- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
- Widths: 36" to 72" in 1" increments
- Modesty Base Height: 1" Floor

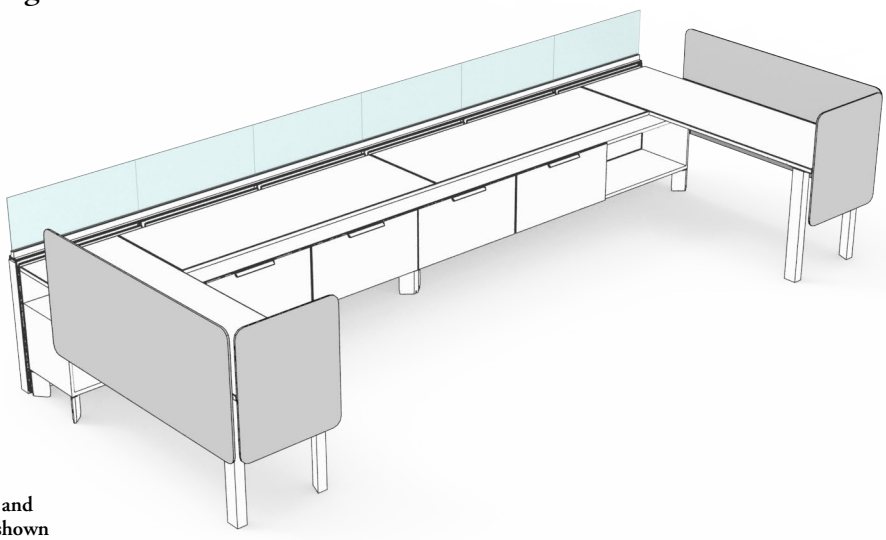

Framed Fabric Side Desk Edge Floor Screen (GYED)

- Depths: 18" to 36" in 6" increments
- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
- Modesty Base Height: 1" Floor

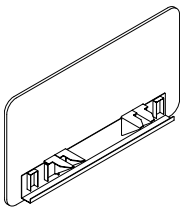

desk edge screen basics (continued)

smooth felt desk edge screens

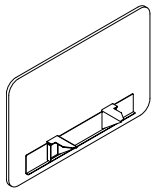

Smooth Felt Desk Edge and Side Desk Edge Screen shown

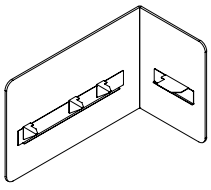

The Smooth Felt Screens can be used on District worksurfaces.
They are available in Complements: *Teknion's Ergonomics & Accessories Program*.

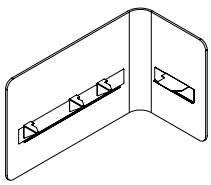

Smooth Felt Desk Edge Screen (GZDH)

Smooth Felt Side Desk Edge Screen (GZSH)

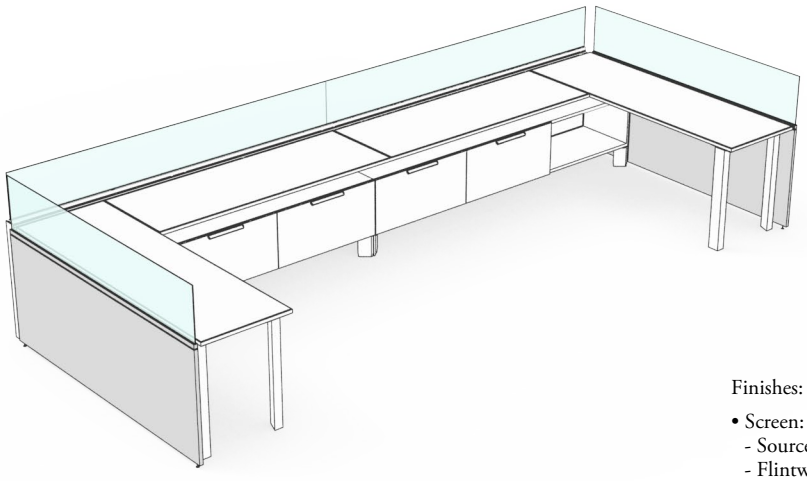

Smooth Felt Square Corner Desk Edge Screen (GZBH)

Smooth Felt Curved Radius Desk Edge Screen (GZCH)

desk edge screen basics (continued)

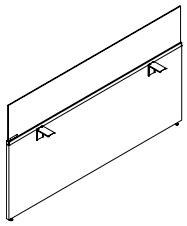

desk edge screens with glass

Finishes:

- Screen:
  - Source Laminate
  - Flintwood (horizontal grain pattern)
  - Natural veneer
- Glass Options:
  - Clear
  - Frosted
- Hardware:
  - Foundation
  - Mica
  - Accent

- A screen that is solid at the bottom with glass at the top
- Two options are available:
  - Desk Edge Screen with Glass, Floor Height
  - Desk Edge Screen with Glass, Floor Height, Inset
- Designed to align with both standard panel glass add-on and inset glass blades

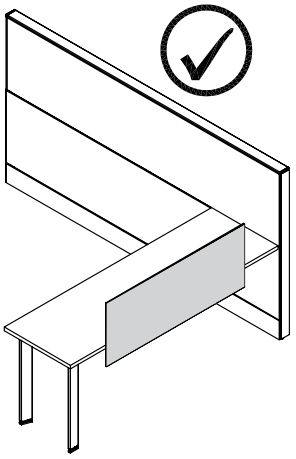

Desk Edge Screen with Glass (GVGD)

- Heights:
  - 31" Solid with 11" Glass to provide a 42"h datum
  - 29" Solid with 13" Glass to provide a 42"h inset datum
  - 44" Solid with 7" Glass to provide a 51"h datum
  - 31" Solid with 20" Glass to provide a 51"h datum
  - 42" Solid with 9" Glass to provide a 51"h inset datum
  - 29" Solid with 22" Glass to provide a 51"h inset datum
  - 44" Solid with 13" Glass to provide a 57"h datum
  - 42" Solid with 15" Glass to provide a 57" inset datum
- Widths: 48" to 96" in 6" increments
- Modesty Base Height: 1" Floor

planning with desk edge screens

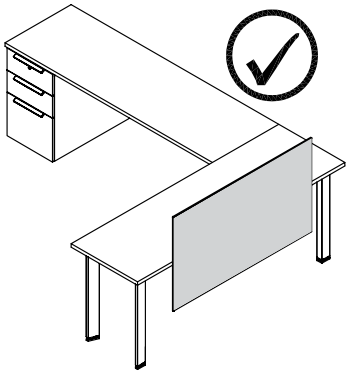

The following should be considered when planning with Desk Edge Screens.

Desk Edge Screens have restrictions depending on whether they are being used in panel mounted or freestanding applications.

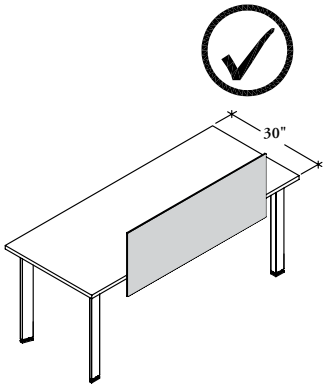

Panel Mounted Worksurface

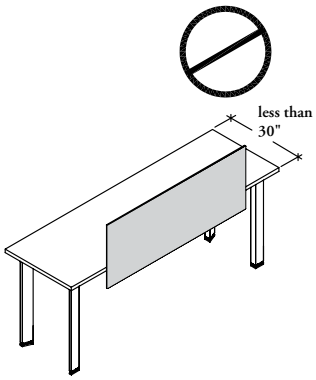

Desk Edge Screens can be mounted to the worksurface with no restrictions.

Freestanding Workstations with a Worksurface Return

Desk Edge Screens can be mounted to the worksurface return with no restrictions, the return surface provides adequate support.

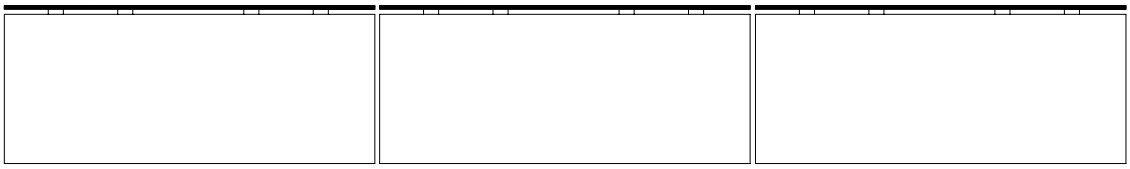

Freestanding Table without a Worksurface Return

Desk Edge Screens can be mounted if the worksurface is 30" deep or more. It **cannot** be mounted on a 24" deep worksurface.

Desk Edge Screens mount on or off-module to the back or return edge of a worksurface to provide full width or casual fit with controlled gaps.

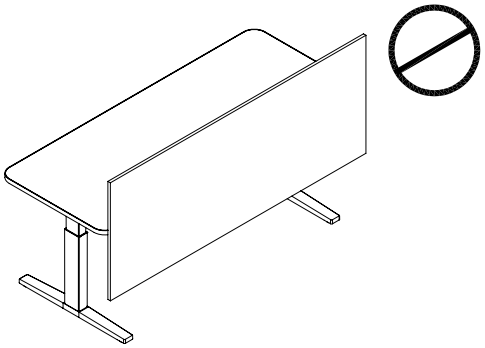

On-Module

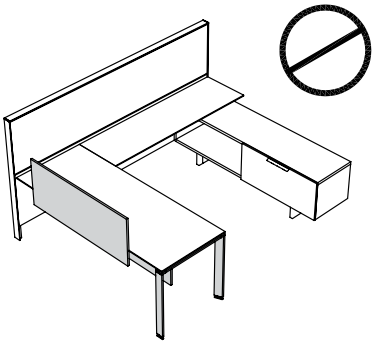

Off-Module

- Desk Edge Screens can be used on height adjustable tables
- Full Height Solid Desk Edge Screens **cannot** be used due to interference when the table is lowered

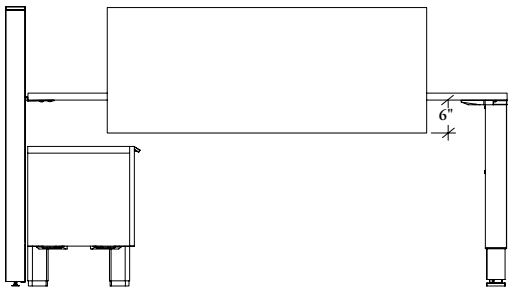

- A Solid Desk Edge Screen **cannot** be used in combination with a Modesty Panel, the brackets will interference

planning with desk edge screens (continued)

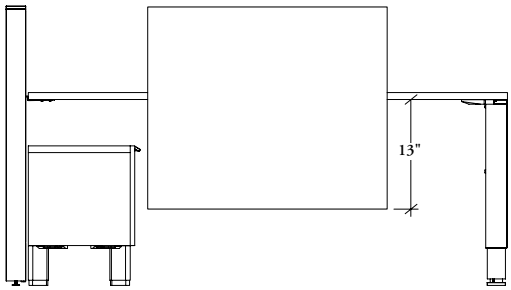

solid and glass desk edge screens

Desk Edge Screens provides visual privacy above desk height to a 42" datum with minimal modesty privacy below.

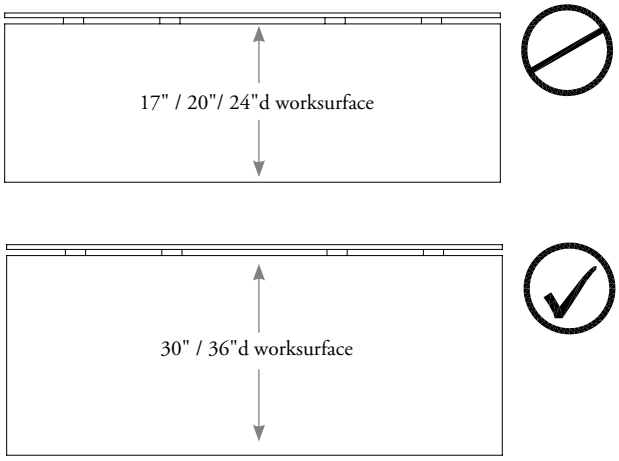

Desk Edge Screens extend 6" below the worksurface to provide minimal modesty privacy.

Desk Edge Screen – Full-Height (UNSFDE) provides visual privacy above and additional modesty privacy below.

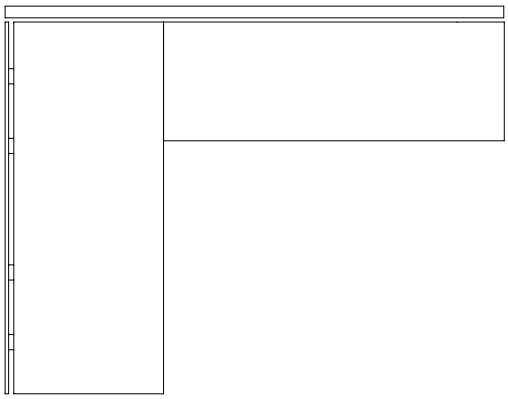

Desk Edge Screens – Full Height extend 13" below the worksurface to provide additional modesty privacy.

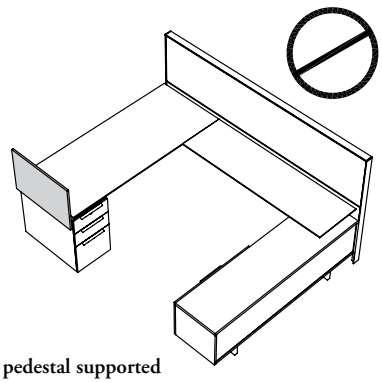

The Desk Edge Screen – Full Height (UNSFDE) can only be used on worksurfaces 30" and 36" deep when used in freestanding applications.

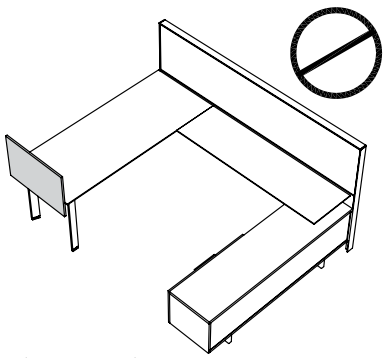

The Desk Edge Screen – Full Height (UNSFDE) can be used on all worksurface depths when worksurfaces are semi-suspended in panel wall applications.

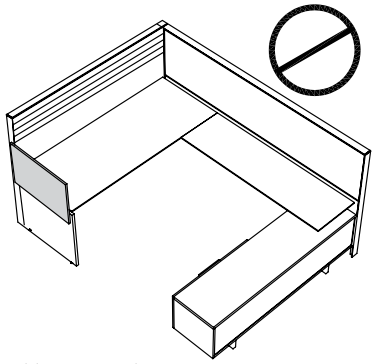

Solid and Glass Desk Edge Screens **cannot** be used on the side of a worksurface due to interference from storage and supports.

pedestal supported

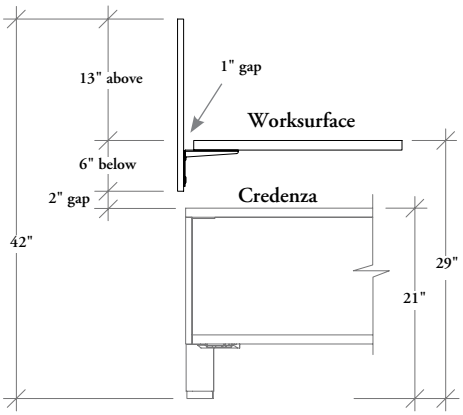

leg supported

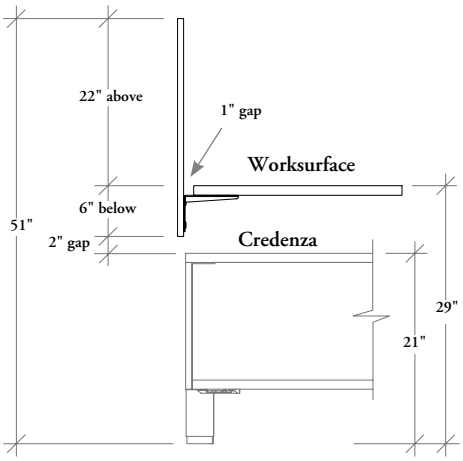

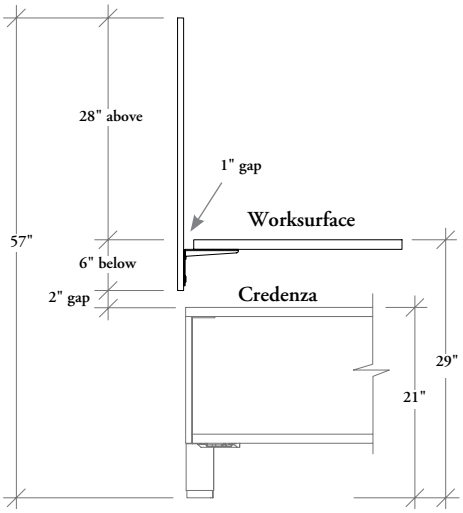

gable supported

planning with desk edge screens (continued)

The Desk Edge Screen (UNSDE/ UNSDEG) is mounted with a 1" cable management gap from the surface.

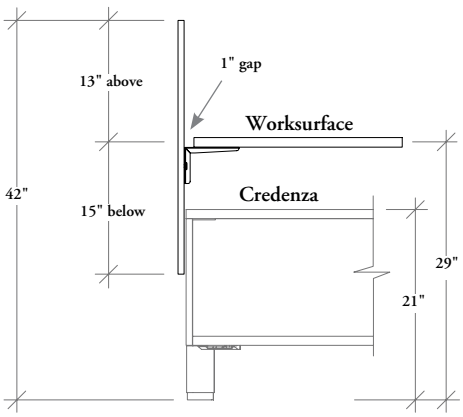

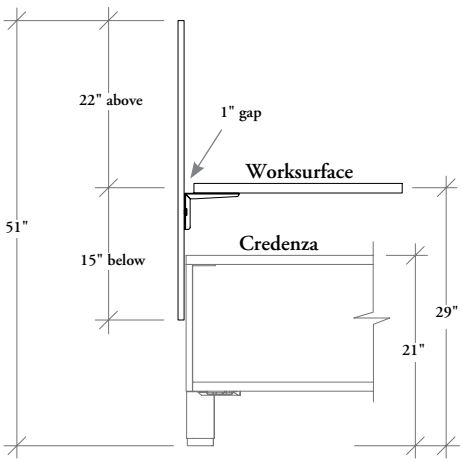

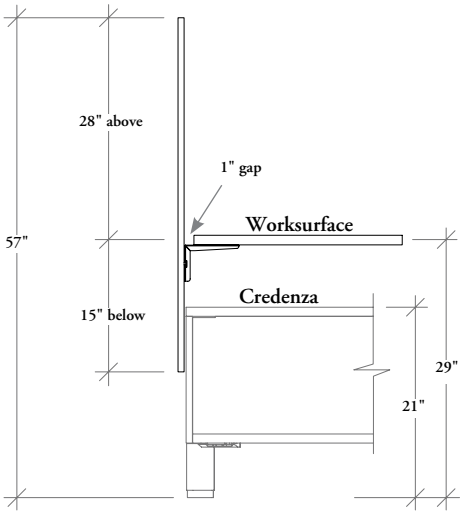

The desk edge screen extends 6" below the worksurface providing a 2" clearance above a credenza.

The Desk Edge Screen – Full-Height (UNSFDE/ UNSFDG) provides the 1" cable management gap.

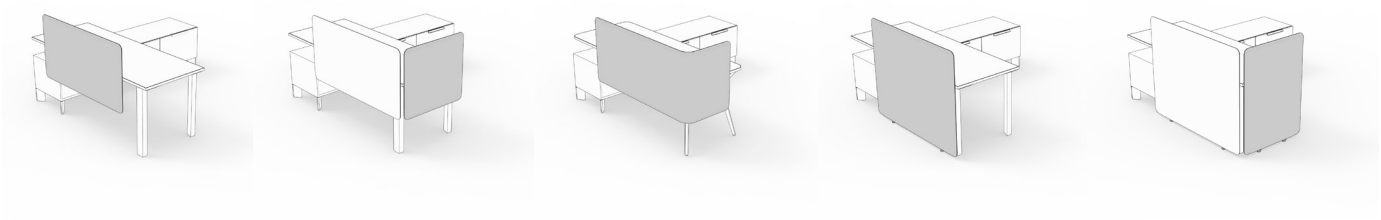

The full height desk edge screen extends 15"(UNSFDE) or 17 2/5" (UNSFDG) below the worksurface provides no clearance over a low credenza.

planning with desk edge screens (continued)

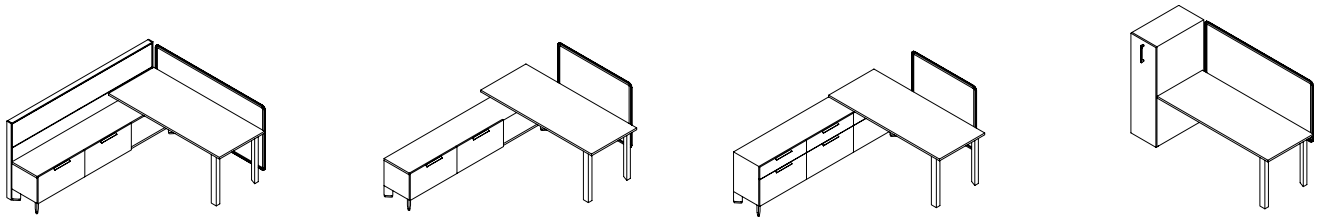

infinity screens

The following applications are available when planning with infinity screens.

Desk Edge Screen | **Side Desk Edge Screen** | **Curved Desk Edge Screen** | **Desk Edge Floor Screen** | **Side Desk Edge Floor Screen**

Infinity Desk Edge Screens can be attached to worksurfaces in the following applications:

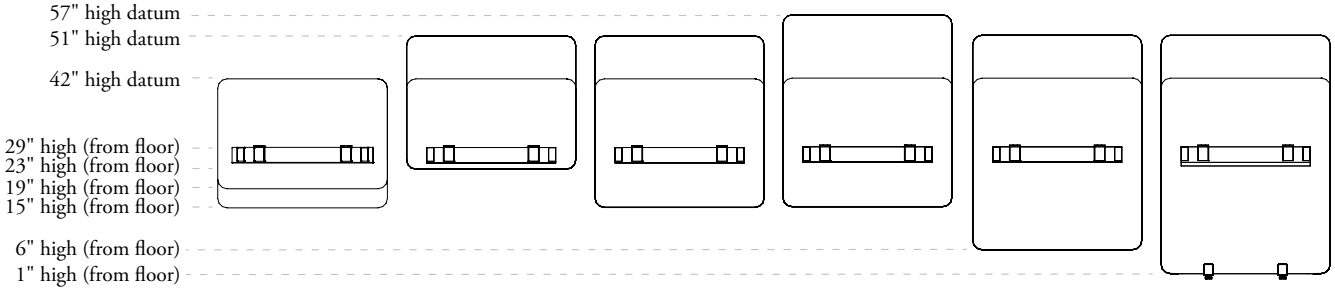

Worksurface attached to panel

Worksurface attached to low storage

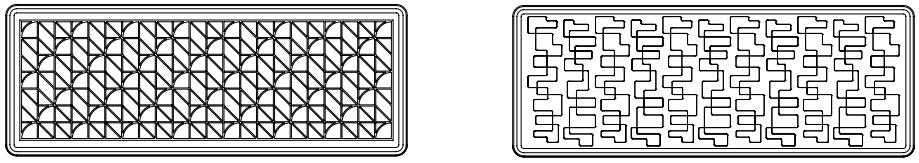

Worksurface attached to high storage with width restrictions

Worksurface attached to the side of storage

The following are all of the possible datum and modesty heights for Desk Edge Screens.
Refer to each individual screen for the list of specific heights available for that screen.

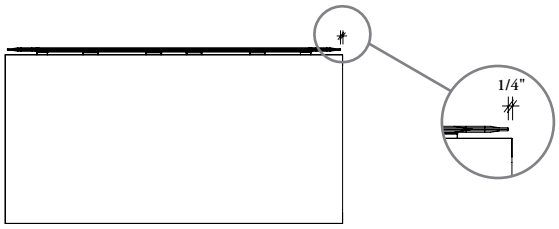

There are two types of patterns available when planning with the Quilted Infinity Desk Edge Screens:

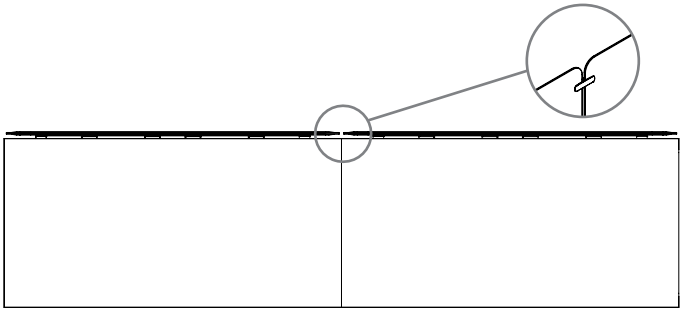

Pico | **Diode**

planning with desk edge screens (continued)

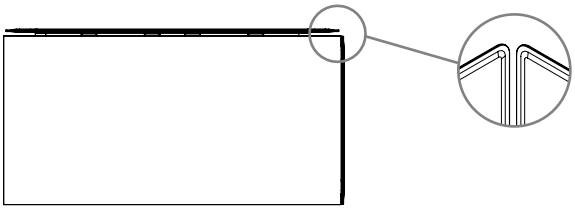

Infinity Screen widths are nominal.
• The actual width is 1/4" less on each side

When two screens are planned side by side, there will be a 1/2" gap between the two screens.
• Screen Alignment Clips (**GXCC**) are used to align the two parallel screens

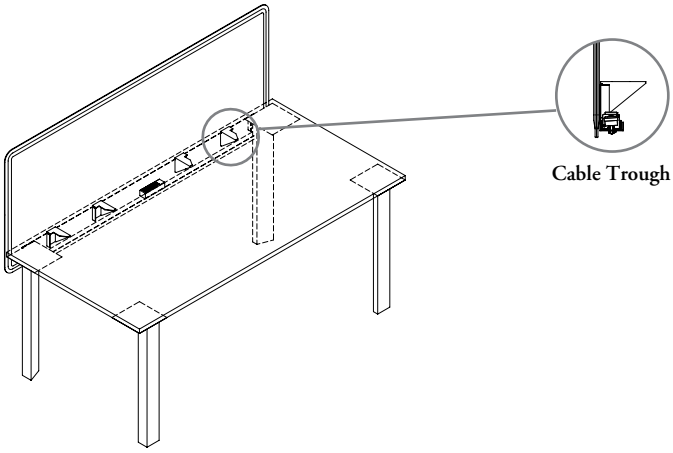

Infinity screens have no physical connection at corners. They are a casual fit.

Infinity Desk Edge Screens offer an optional wire manager that accompanies the bracket connection.

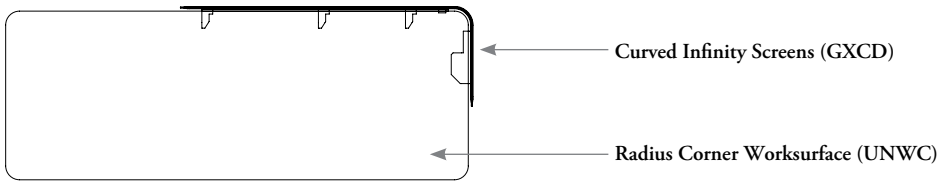

• The gap will always be 1/2"
• A continuous trough allows for cable management
• The trough can accommodate a Power Rod (YEPD) or Power Bar (YEPS). Available in Complements: *Teknion's Ergonomics & Accessories Program*
• When planning with integrated height-adjustable tables, the wire manager should not be specified due to interference with storage below

Cable Trough

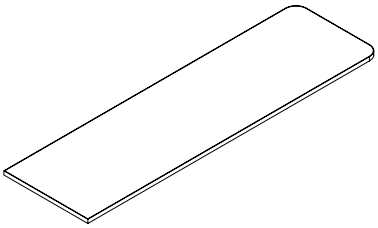

planning with desk edge screens (continued)

Curved Infinity Screens (GXCD) can be used with Rectangle with Radius Corners Worksurface (UNWC).

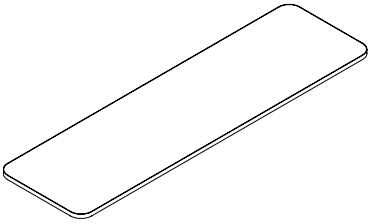

Two types of radium corner worksurfaces are available:

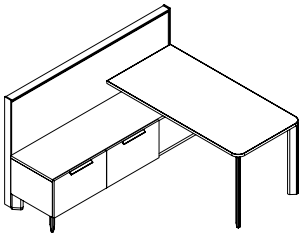

- rectangular with two radius corners
- rectangular with four radius corners

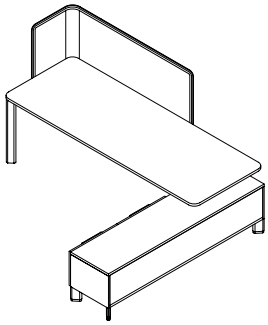

Rectangle with Radius Corners Worksurface (UNWC) - two radius

Rectangle with Radius Corners Worksurface (UNWC) - four radius

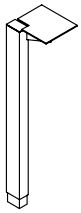

Two Radius Corners is suitable when the worksurface needs to be terminated with square corners or when joined with a return worksurface.

Four Radius Corners is suitable when a radius is desired on all corners of the surface and no other furniture is being planned against it.

For more information on Rectangle with Radius Corners Worksurfaces (UNWC), see *Worksurfaces* section for more details.

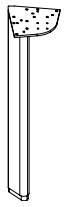

The following leg styles can be used with Rectangle with Radius Corners Worksurfaces:

Interpret Leg (WWSWN)

upStage Leg (HTWD)

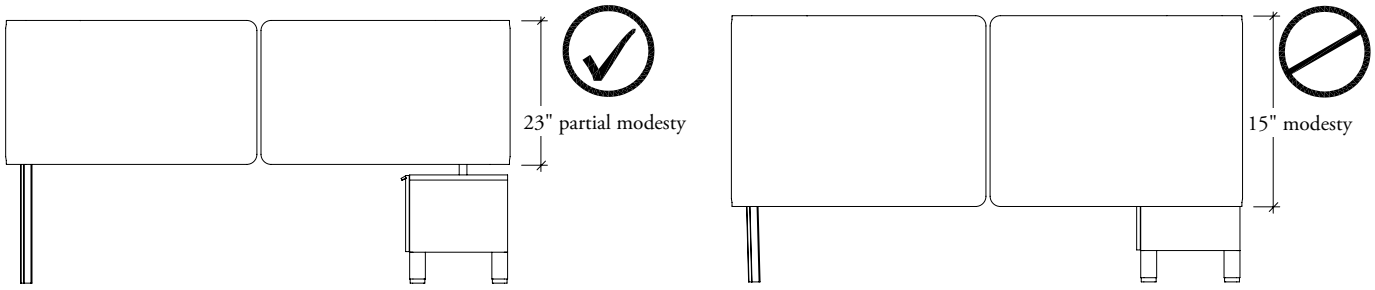

Leverage Leg (KLP1, KLP2, KLP3 and KLP4)

planning with desk edge screens (continued)

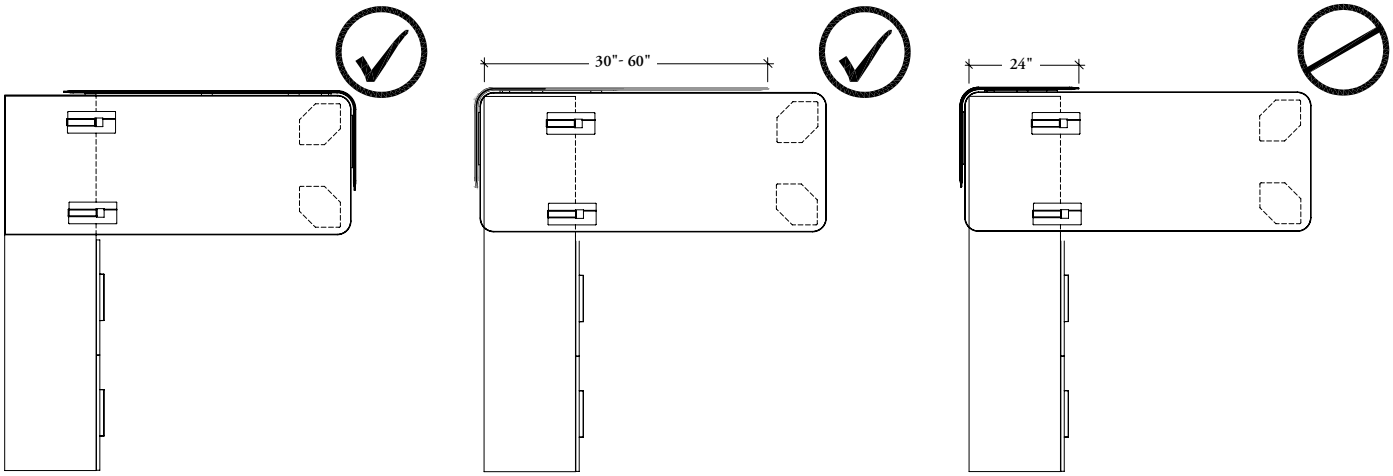

When planning a curved infinity screen with a District low credenza, the 23" h. modesty version must be used.

• The brackets on a 15"h. modesty will interfere with the credenza

When Infinity Curved Desk Edge Screens are specified with credenza, screen needs to stop short of the edge of the desk when used with two worksurface supports depending on storage depth. For example, if 16"deep Credenza is specified, the screen must stop 16" from the edge of worksurface.

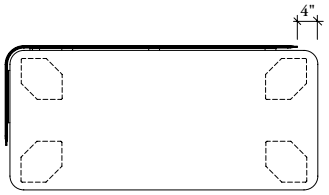

If Screen is justified to storage side with dual supports, Infinity Curved Desk Edge Screens with 30" to 60" width has to be specified.

This application works with 23" modesty only.

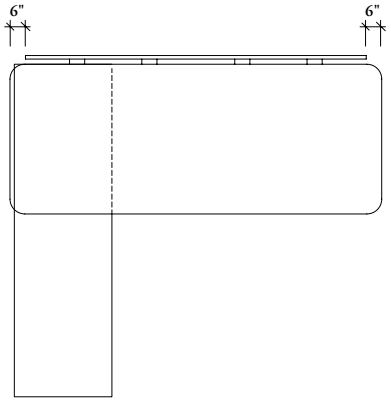

If Infinity Curved Desk Edge Screen is justified to storage side with single support, any of the 24" to 60" wide screens can be specified.

When planning with a curved screen that almost fits the full width of the worksurface and the open end is facing the outside, it must stop a minimum of 4" from the edge to avoid post leg interferences.

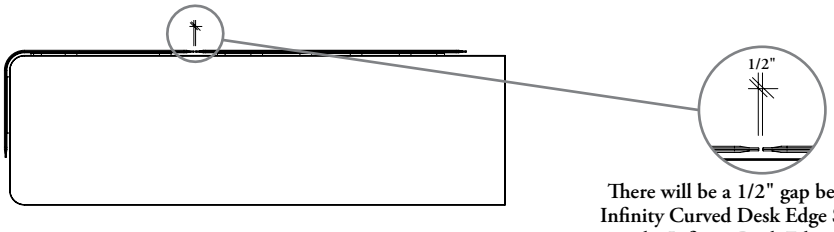

planning with desk edge screens (continued)

When planning with Infinity Desk Edge Screens with Rectangle with Radius Corners Worksurfaces, it is recommended to specify screens 6" less than the worksurface.

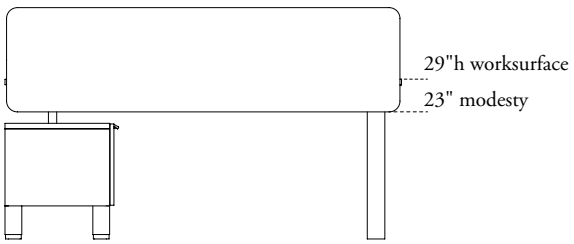

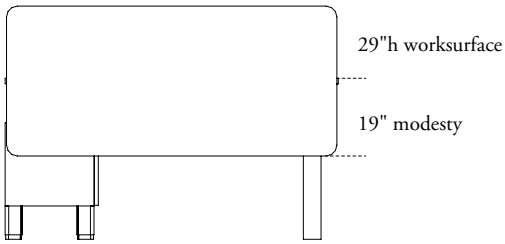

Infinity Curved Desk Edge Screen and Infinity Desk Edge Screen can be planned side-by-side

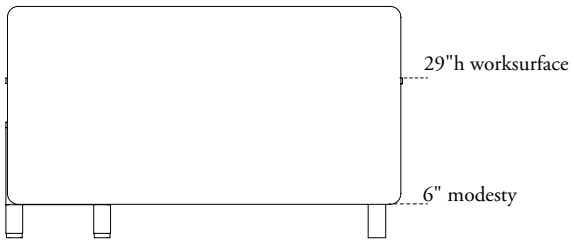

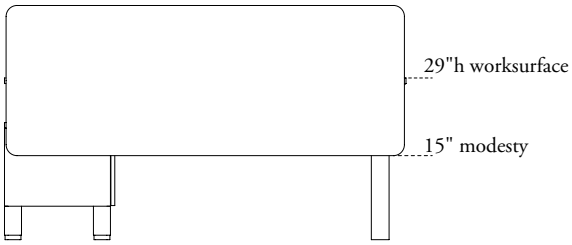

There will be a 1/2" gap between the Infinity Curved Desk Edge Screen and the Infinity Desk Edge Screen

Infinity Desk Edge Screen with partial modesty (23") can be planned over low storage. With lower modesty heights (6", 15" and 19"), the screen must sit outside of the low storage to avoid interferences. Screens with 19" modesty heights are available in Complements: *Teknion's Ergonomics & Accessories Program*.

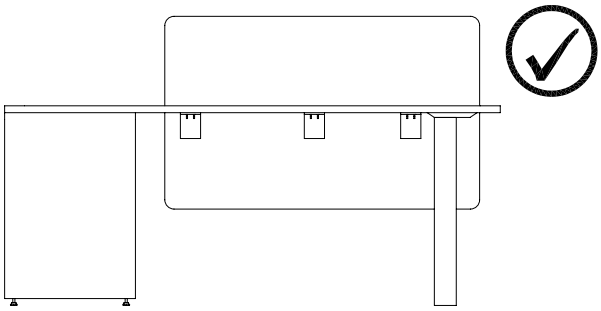

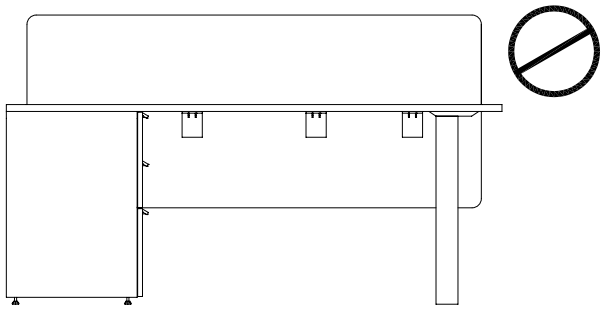

planning with desk edge screens (continued)

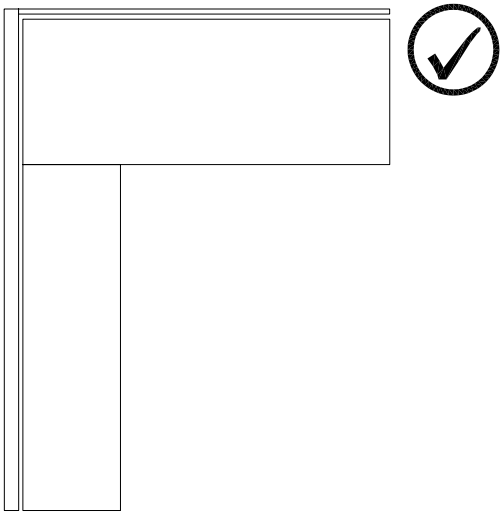

When planning with high storage, Infinity desk Edge Screen must stop short of storage as brackets will not be able to attach between storage and worksurface.
The high storage should be specified to have open storage instead of drawers under the worksurface due to interference with the brackets.

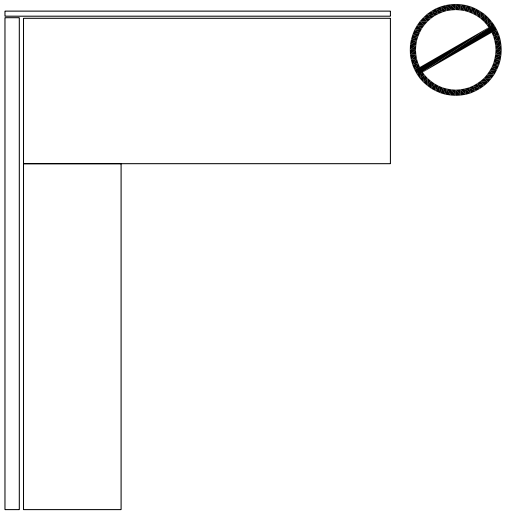

When planning an infinity desk edge screen perpendicular to a panel wall, the screen should extend to the panel wall to hide the 1" wire gap on the worksurface.

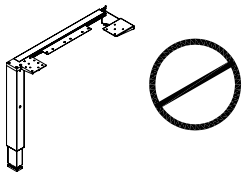

- It is not recommended that the screen extend past the end of the panel

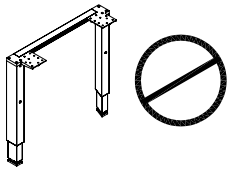

planning with desk edge screens (continued)

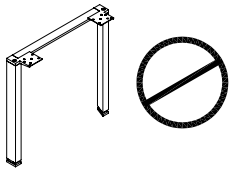

The following outlines the gables and legs that can be used with an infinity side desk edge screen.

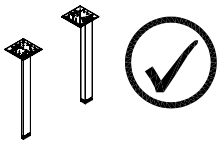

End Gable – Height-Adjustable (UNGEAN)

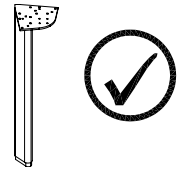

Semi-Suspended Gable – Height-Adjustable (UNGSAN)

Semi-Suspended Gable (UNGSN)

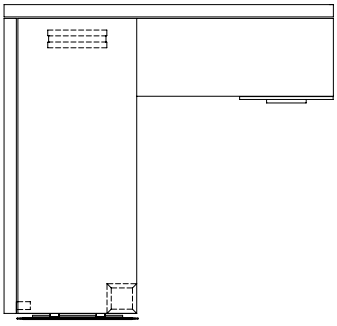

Leg – Pair (UNLGPN)

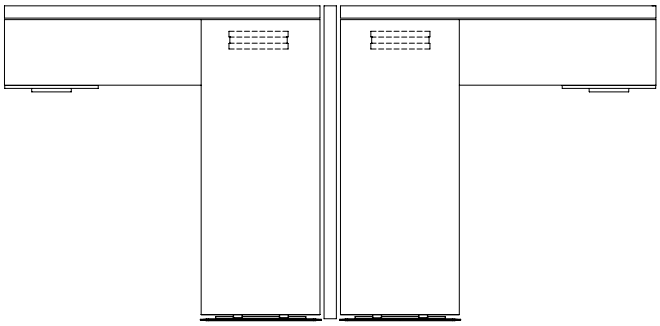

Leverage Leg (KLP)

Infinity Side Desk Edge Screens can be planned in panel or to create corridor privacy on the end of return desks

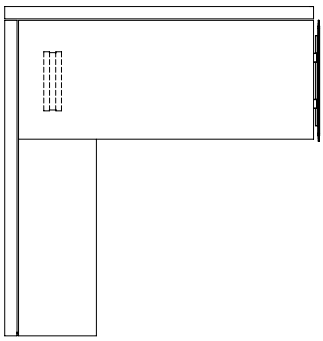

The screen provides additional privacy when used on the end of a worksurface in a panel environment.

The screen provides corridor privacy in a non panel environment.

When planning with a low credenza, an infinity side desk edge screen can be used on the storage side.

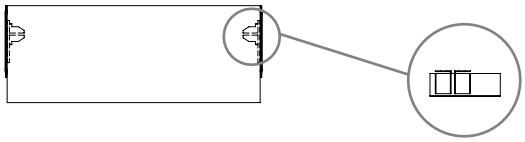

• The screen must attach to the surface so that it sits outside of the credenza

Low Credenza

planning with desk edge screens (continued)

18" deep Infinity Side Desk Edge Screens (GXSD) and Infinity Side Desk Edge Floor Screens (GXED) have re-positionable brackets, allowing these screens to be planned on either side of the worksurface.

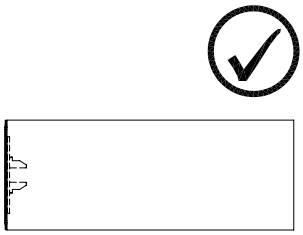

Infinity Side Desk Edge Screens can be planned at both partial and full depth.

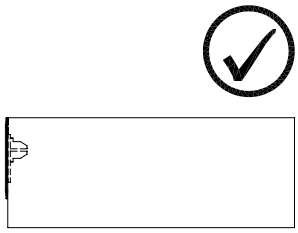

All screens can be planned with 24"-36"d worksurfaces. Due to leg interference issues, this screen **cannot** be attached to 18" deep worksurfaces. An 18" side desk edge screen can be placed on a 23"/24"d worksurface as a partial fit.

18" deep worksurface with
18" deep Infinity Side Desk Edge Screen (GXSD)

24" deep worksurface with
24" deep Infinity Side Desk Edge Screen (GXSD)

24" deep worksurface with
18" deep Infinity Side Desk Edge Screen (GXSD)

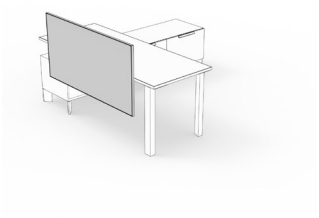

30" deep worksurface with
24" deep Infinity Side Desk Edge Screen (GXSD)

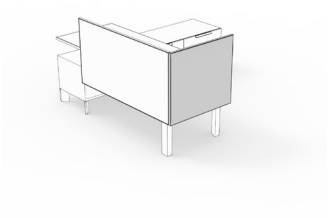

planning with desk edge screens (continued)

framed fabric screens

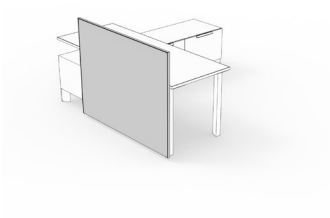

The following applications are available when planning with framed fabric screens.

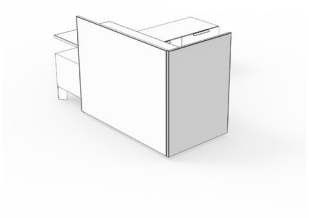

Desk Edge Screen

Side Desk Edge Screen

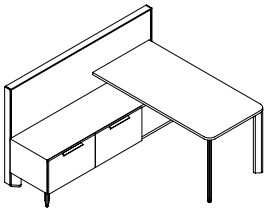

Desk Edge Floor Screen

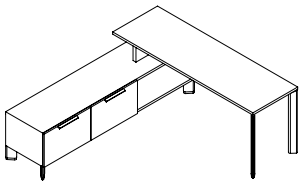

Side Desk Edge Floor Screen

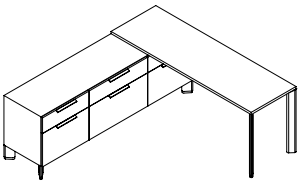

Framed Fabric Desk Edge Screens can be attached to worksurfaces in the following applications:

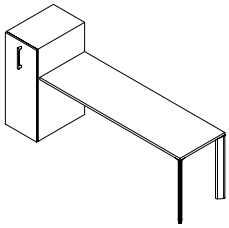

Worksurface attached to panel

Worksurface attached to low storage

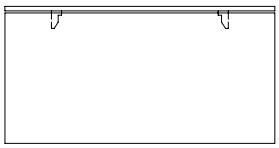

Worksurface attached to high storage with width restrictions

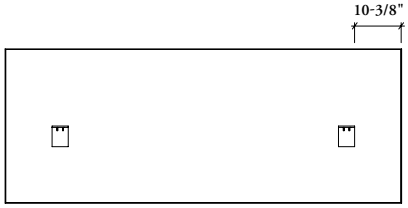

Worksurface attached to side of storage

Framed Fabric Screen widths are actual and will be same width as worksurface.

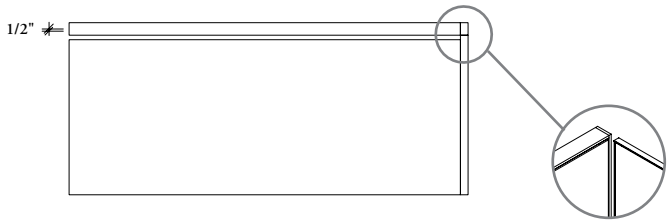

Framed Desk Edge Screens have a common bracket placement distance of 10-3/8" inset from the edge.

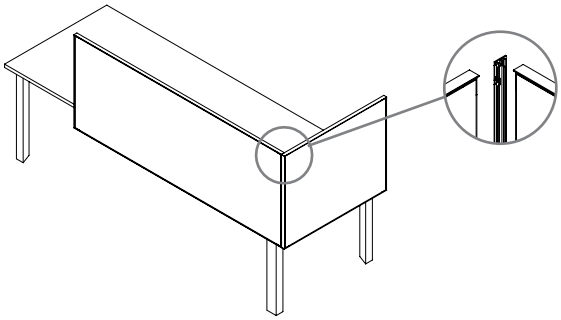

planning with desk edge screens (continued)

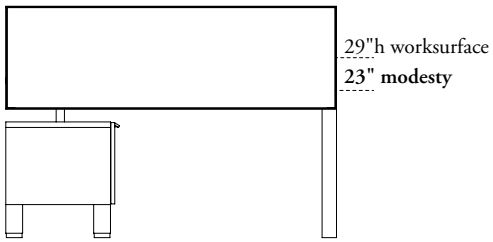

Framed Fabric Screen must be planned with a 1/2" wire gap in order to ensure front edge of the Framed Fabric Side Desk Edge Screen will be aligned to the front edge of the desk.

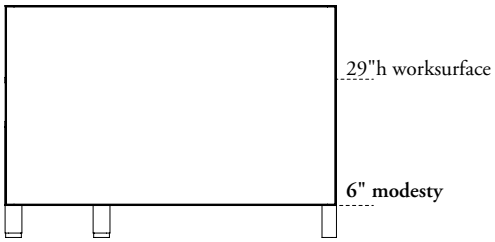

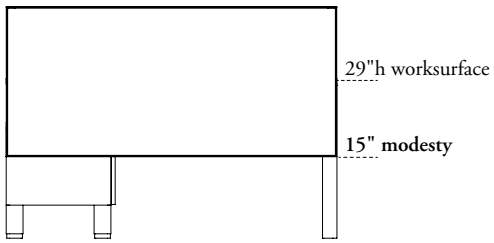

Corner detail with Framed Fabric Screens are closed and have physical connection between the Desk Edge Screen and Side Desk Edge Screen via extrusion trim.

Framed Fabric Desk Edge Screen with partial modesty (23") can be planned over low storage. With lower modesty heights (6" and 15"), the screen must sit proud of the low storage to avoid interferences.

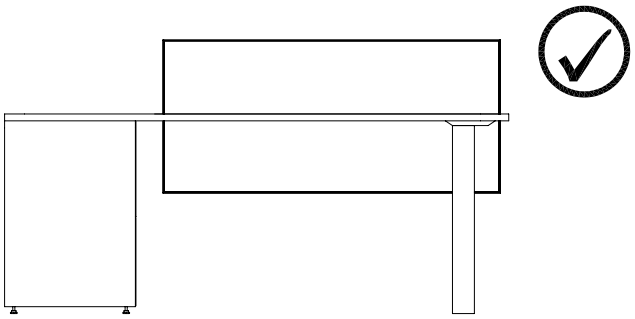

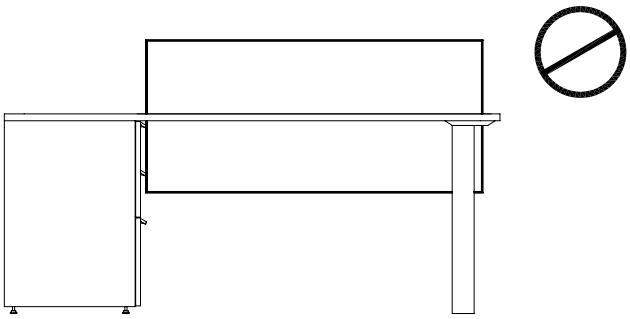

planning with desk edge screens (continued)

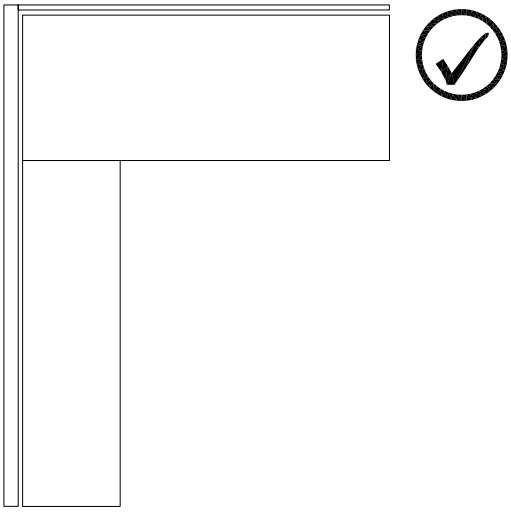

When planning with high storage, Framed Fabric Desk Edge Screen must stop short of storage as brackets will not be able to attach between storage and worksurface. The high storage should be specified to have open storage instead of drawers under the worksurface due to interference with the brackets.

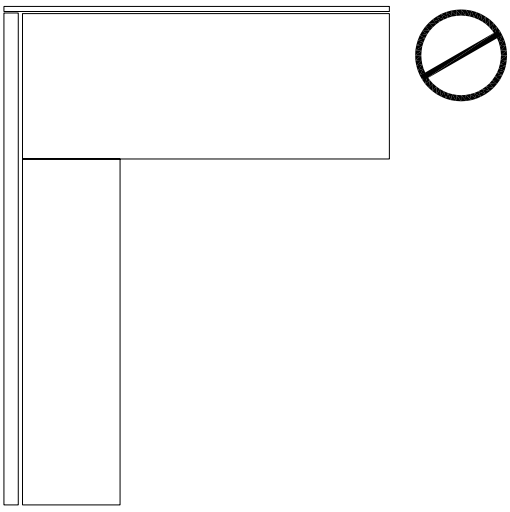

When planning a framed fabric desk edge screen perpendicular to a panel wall, the screen should extend to the panel wall to hide the 1" wire gap on the worksurface.

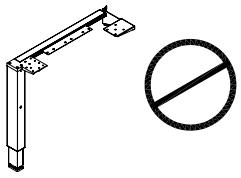

• It is not recommended that the screen extend past the end of the panel

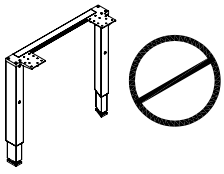

planning with desk edge screens (continued)

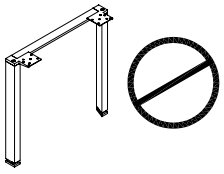

The following outlines the gables and legs that can be used with a framed fabric side desk edge screen.

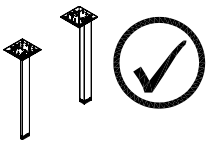

End Gable – Height-Adjustable (UNGEAN)

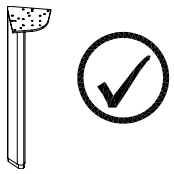

Semi-Suspended Gable – Height-Adjustable (UNGSAN)

Semi-Suspended Gable (UNGSN)

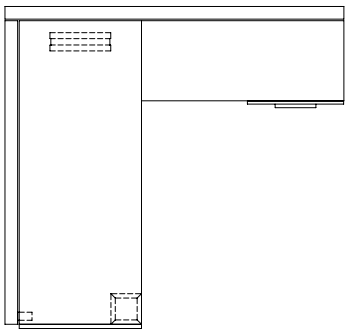

Leg – Pair (UNLGPN)

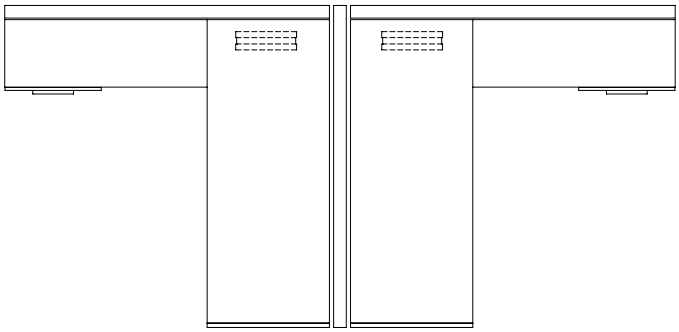

Leverage Leg (KLP)

Framed Fabric Side Desk Edge Screens can be planned in panel or to create corridor privacy on the end of return desks

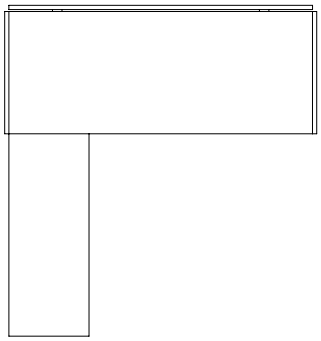

The screen provides additional privacy when used on the end of a worksurface in a panel environment.

The screen provides corridor privacy in a non panel environment.

When planning with a low credenza, a framed fabric side desk edge screen can be used on the storage side.

• The screen must attach to the surface so that it sits outside of the credenza

Low Credenza

planning with desk edge screens (continued)

Framed Fabric Side Desk Edge Screens can be planned at both partial and full depth.

All screens can be planned with 24"-36"d worksurfaces. Due to leg interference issues, this screen **cannot** be attached to 18" deep worksurfaces. An 18" side desk edge screen can be placed on a 23"/24"d worksurface as a partial fit.

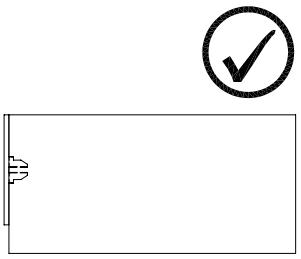

18" deep worksurface with

Edge Screen (GYSD)

planning with desk edge screens (continued)

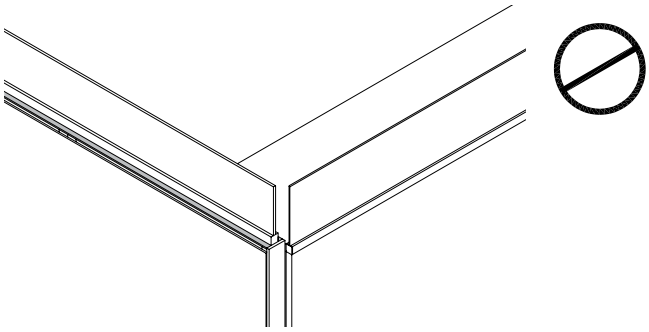

desk edge screens with glass

Available in heights that match the datum heights of both Panel Wall Add-On Screens - Glass and Inset Glass Blades.

The support frame on a Panel Wall Add-On Screen - Glass is 2" high therefore increasing the datum height of the actual glass by 2".
Desk Edge Screens with Glass are also available with a 2" higher glass datum height.
When used together the two will align.

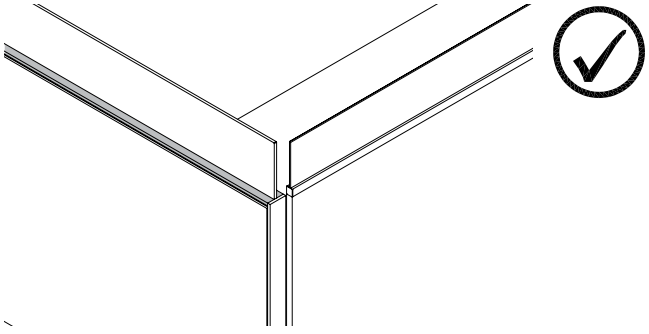

- Example shown:
  42" high panel with 9" Panel Wall Add-On Screen = 51" overall height
- Recommended screen height with Glass:
  44"h with 7" glass
- This allows for the 2" add-on glass frame height

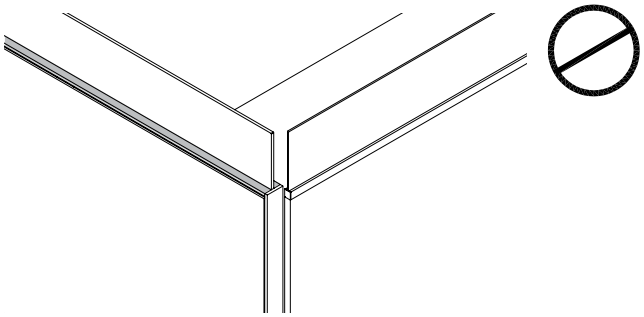

- Using a 42"h solid with 9" glass will result in a 2" difference in the datum heights of the glass

There is no support frame on an Inset Glass Blade, the glass mounts directly into the panel frame so the datum height of the glass does not change.
Desk Edge Screens with Glass are available with datum heights that match the top of a panel frame.
When used together the two will align.

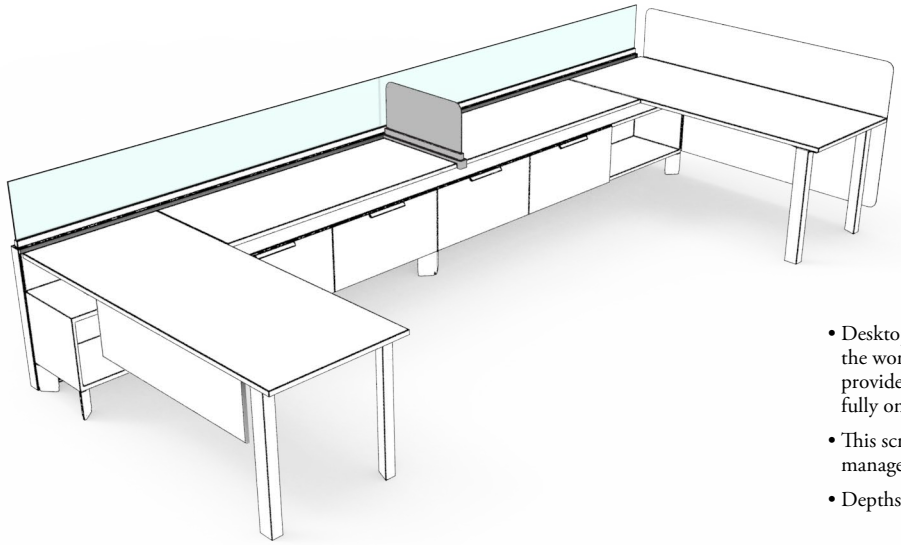

- Example shown:
  42"h panel with 9" Inset Glass Blade = 51" overall height
- Recommended screen height:
  42" solid with 9" glass
- This allows both glass datum heights to be at 42"h

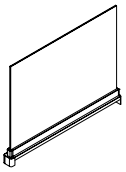

- Using a 44" solid with 7" glass will result in a 2" difference in the datum heights of the glass

desktop lateral screen basics

Lateral screens attach to the top of a worksurface to provide lateral privacy and space division at multiple heights.

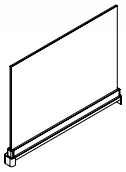

- Desktop Lateral Screens attach to the worksurface without any tools to provide lateral space division. It rests fully on the worksurface
- This screen has 1" gap for wire management
- Depths: 23", 29" and 35"

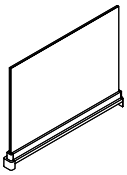

6mm Glass Lateral Screen (GNGD)

- A 6 mm glass screen with a straight profile
- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
  - 28" for a 57"h datum
- Finish:
  - Clear
  - Frost

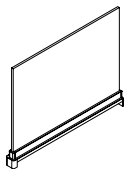

10mm Glass Lateral Screen (GNTD)

- A 10 mm glass screen with a straight profile
- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
  - 28" for a 57"h datum
- Finish:
  - Clear
  - Frost

Writable Glass Lateral Screen (GNWD)

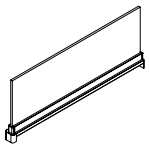

- A writable glass screen with a straight profile
- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
  - 28" for a 57"h datum
- Finish:
  - Specialty Glass Laminate
  - Specialty Glass Grade 7

Solid Lateral Screen (GNSD)

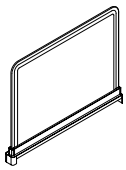

- A solid screen with a straight profile
- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
  - 28" for a 57"h datum
- Finish:
  - Source Laminate
  - Natural Veneer
  - Flintwood

desktop lateral screen basics (continued)

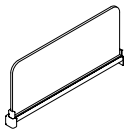

Writable Laminate Lateral Screen (GNLD)

- A writable laminate screen with a square profile
- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
  - 28" for a 57"h datum
- Finish:
  - Specialty Writable Laminate

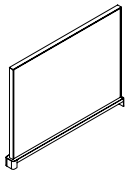

Infinity Fabric Lateral Screen (GNXD)

- A fabric screen with a curved profile
- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
  - 28" for a 57"h datum
- Finish:
  - Select Panel and Upholstery fabrics are available - refer to the *Teknion Textiles Program Guide*

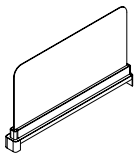

Smooth Felt Lateral Screen (GNZD)

- A felt screen with a curved profile
- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
- Finish:
  - Strata
  - Pewter
  - Lunar

Framed Fabric Lateral Screen (GNYD)

- A framed fabric screen with a square profile
- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
  - 28" for a 57"h datum
- Finish:
  - Select Panel and Upholstery fabrics are available - refer to the *Teknion Textiles Program Guide*

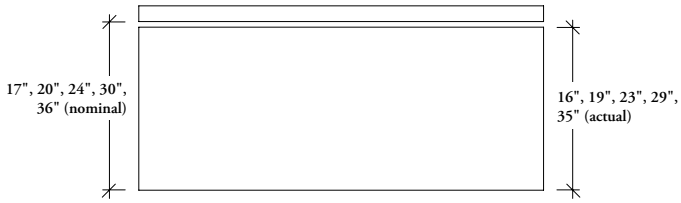

Metal Lateral Screen (GNMD)

- A metal screen with a curved profile
- Heights:
  - 13" for a 42"h datum
  - 22" for a 51"h datum
- Metal Finish:
  - Foundation
  - Mica
  - Accent

planning with desktop lateral screens

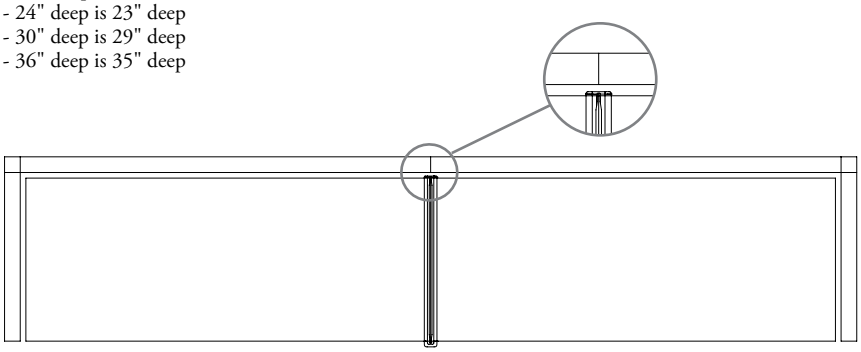

The following should be considered when planning with desktop lateral screens.

It is important to understand the depth of worksurfaces with panels when specifying lateral screens.

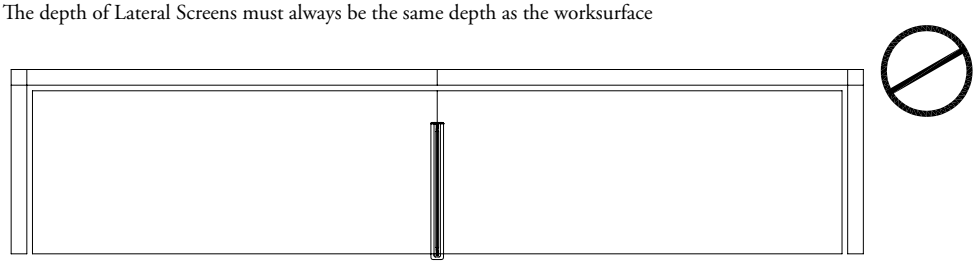

- All worksurfaces have nominal depths (the actual depth is 1" less than the nominal depth) to allow for a gap at the back
- The gap is not optional, it is the standard configuration

- Lateral screens have nominal depths and can be specified to fit Rectangular Worksurfaces (UNWR)
- Actual depths of lateral screens are:
  - 24" deep is 23" deep
  - 30" deep is 29" deep
  - 36" deep is 35" deep

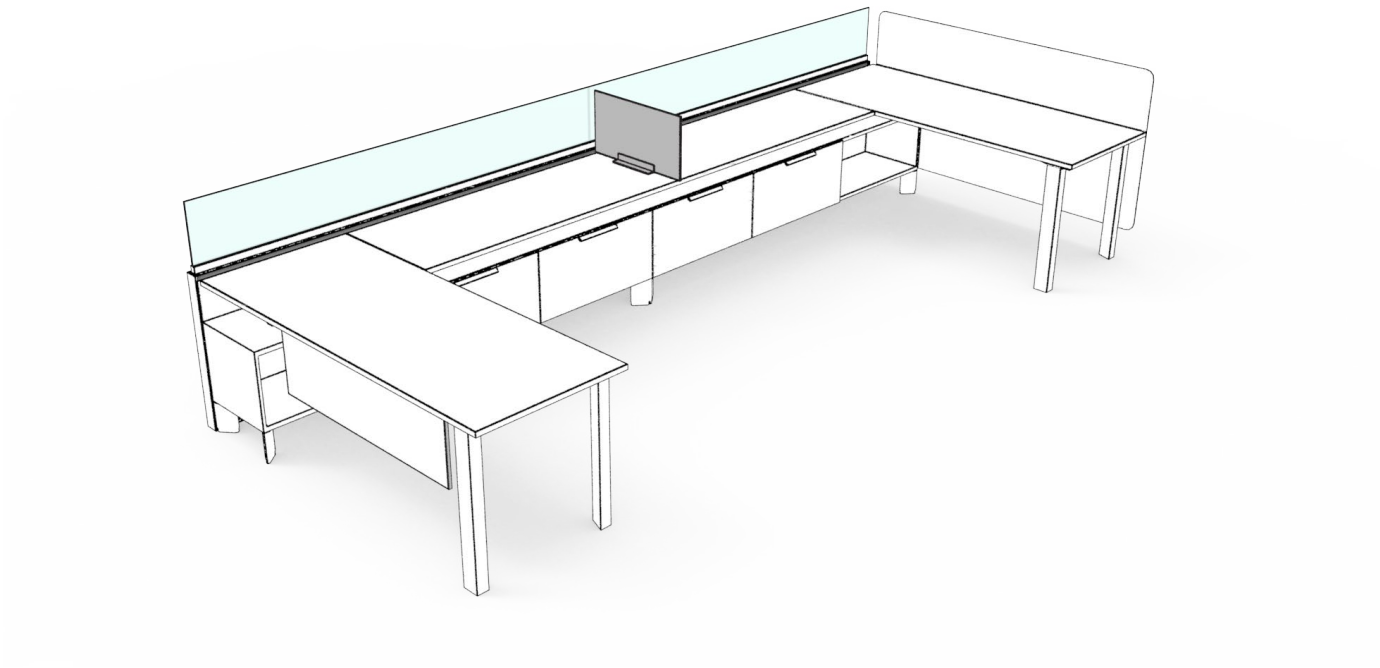

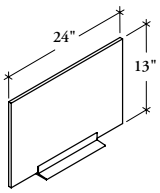

- The depth of Lateral Screens must always be the same depth as the worksurface

desk top screen basics

The following outlines the features of the Desk Top Casual Screen

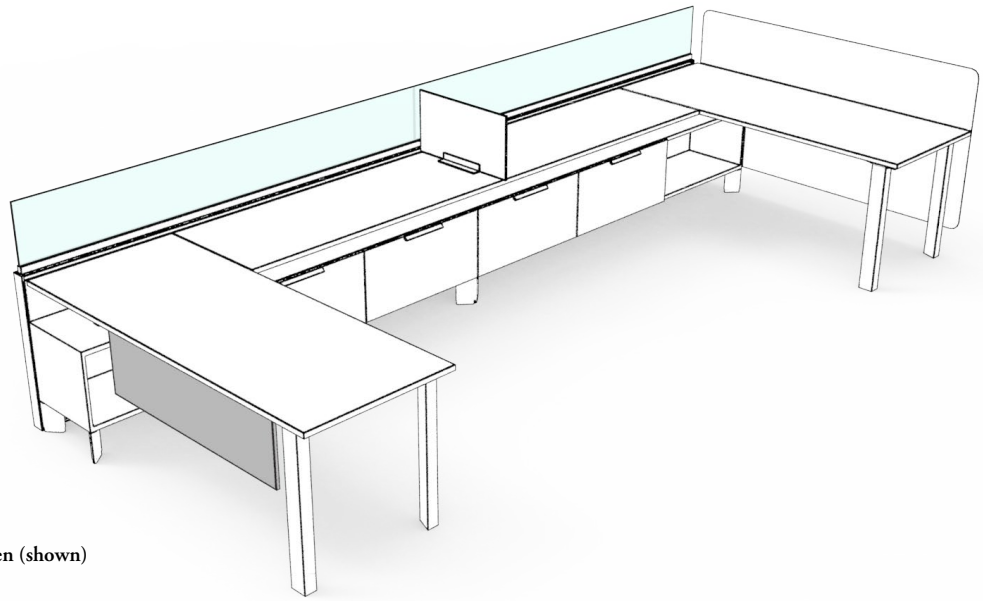

Desk Top Casual Screen (UNSDT)

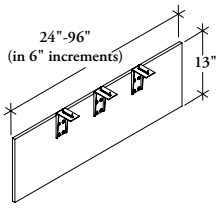

- Is a freestanding screen which sits on top of the worksurface to provide privacy
  - extends 13" above the worksurface for seated height privacy
- Height: 13"
- Widths: 24"
- Screen Finishes:
  -Source Laminate
  -Flintwood
  -Natural Veneer
- Base Finishes:
  -Foundation
  -Mica
  -Clear Anodized

modesty screen basics

The following outlines the features of the Modesty Screen.

Modesty Screen (shown)

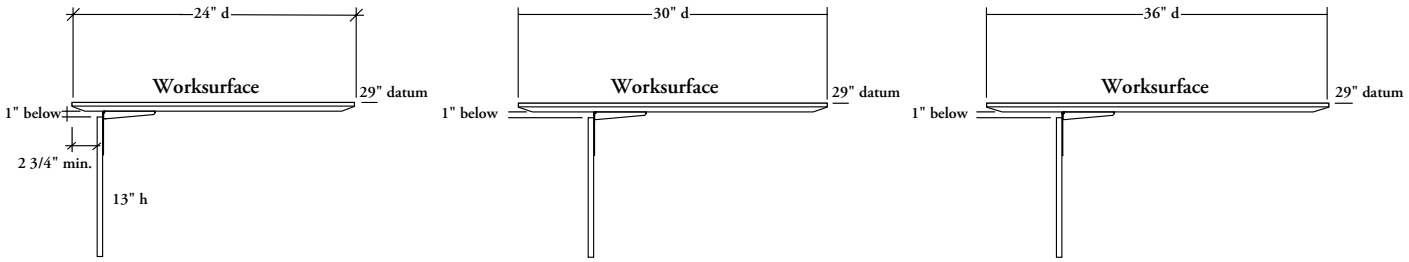

Modesty Screen (UNSM)

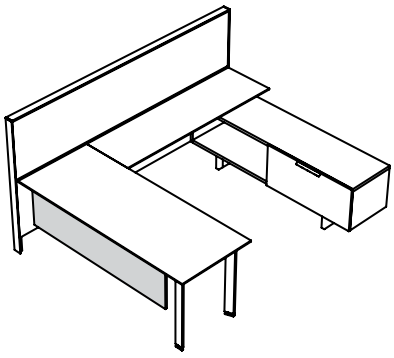

- Mounts 1" below worksurfaces to provide visual privacy
- Is an off-module casual fit
- Actual width is 1" less than the nominal width
- Available in Source Laminate, Fascia Laminate, Standard Flintwood and Natural Veneer finishes
- The Modesty Screen is 14" above finished floor

planning with modesty screens

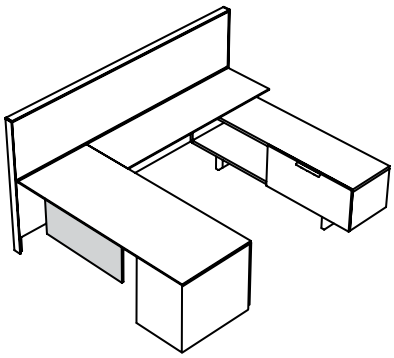

The following should be considered when planning with Modesty Screens.

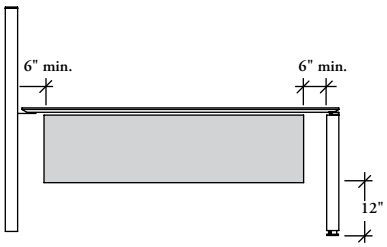

- The suggested minimum recess for the Modesty Screen is 2-3/4" from the back edge of the worksurface
- The recommended distances are:
  24" worksurface 2-3/4" inset
  30" worksurface 6" inset
  36" worksurface 12" inset

The Modesty Screen should be centered in the open space between supports.

The Modesty Screen can be mounted on worksurfaces with various types of desk support options including storage – Attention must be given to reinforcement channel location (see *Supports* section for details).

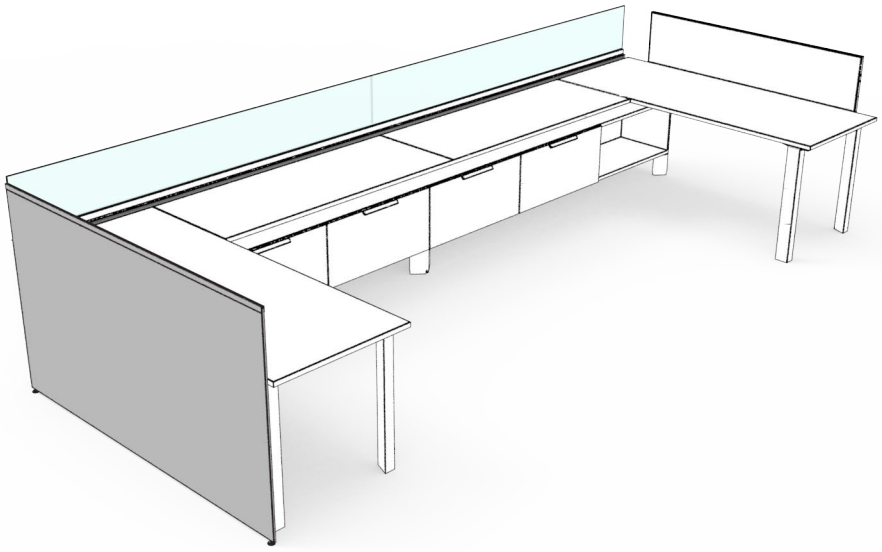

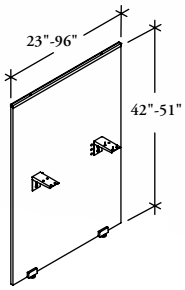

A casual fit is desired, it is recommended that the modesty screen be specified 6" less than the worksurface width on both sides in the area of application.

floor screen basics

The following outlines the features of the Floor Screen.

Floor Screen (shown)

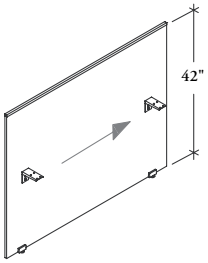

Floor Screen (UNSF)

- A 5/8" thick, 42" or 51" high visual screen that provides privacy to floor level
- Is mounted to a worksurface on- or off-module
- Available in widths from 23" to 96" in 1" increments for 42" high and 23" to 48" widths available in 1" increments for 51" and 57" high
- Provides full width or casual fit with controlled gaps
- Does **not** provide support to the worksurface
- Can only be attached to worksurfaces that are permanently affixed to at least one piece of storage, a Panel Wall, or to a freestanding desk with a return
- Aluminum top rail can accommodate the Pencil Tray (PAX94), Media Organizer (PAX96), Vertical Organizers (PAX99, PAX100) and Workstation Signage (ACWS). Available from Complements: *Teknion's Ergonomics & Accessories Program*
- Can be used with a Vertical Cable Manager (UNVC) which manages cables between the floors and the underside of the worksurface. Must be specified separately. (see *Electrics* section)

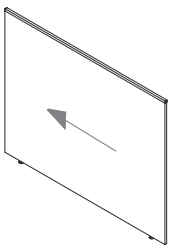

Floor Screen Extended Leveling Kit (UNSFXL)

- Available for height adjustment and leveling on uneven floors

grain direction

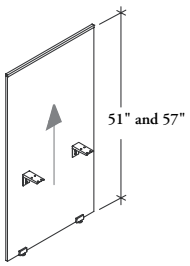

User's Perspective

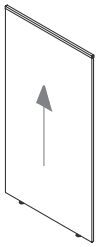

Visitor's Perspective

- For 42" high floor screens the grain runs horizontal
- For Cathedral Flintwood and Natural Veneers the grain direction is from left to right from the user's perspective. From the visitor's perspective, outside the workstation, the grain direction is right to left

User's Perspective

Visitor's Perspective

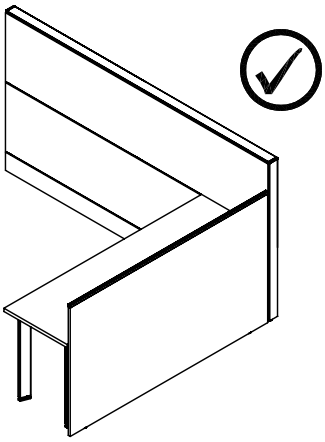

- For 51" and 57" high floor screens the grain runs vertical
- For Cathedral Flintwood and Natural Veneers the grain direction is from bottom to top from both the user's and visitor's perspective, inside and outside the workstation

planning with floor screens

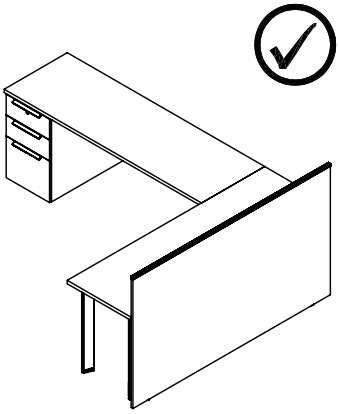

The following should be considered when planning with Floor Screens.

worksurface support

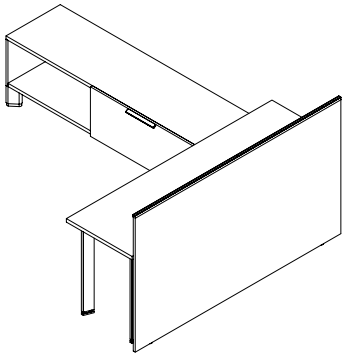

Floor screens can only be used with the following applications:

Worksurfaces that are fixed to a panel wall

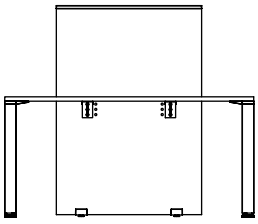

When permanently attached

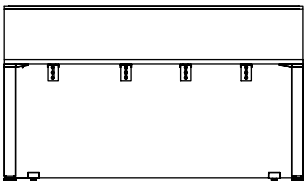

In freestanding applications with a worksurface return

screen widths

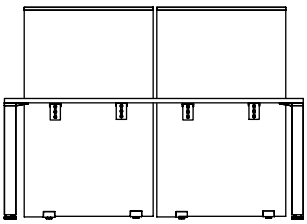

Screens can be installed at different widths depending on the intended result and sizes available.

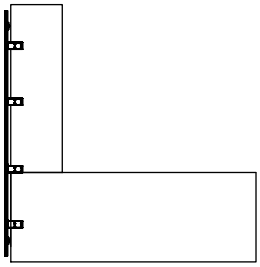

Casual width for partial privacy

Full width for total privacy

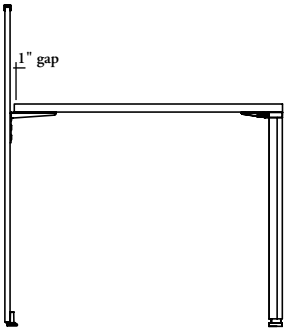

Side-by-side to achieve a specific width and height

Single or multiple screens can span across two worksurfaces

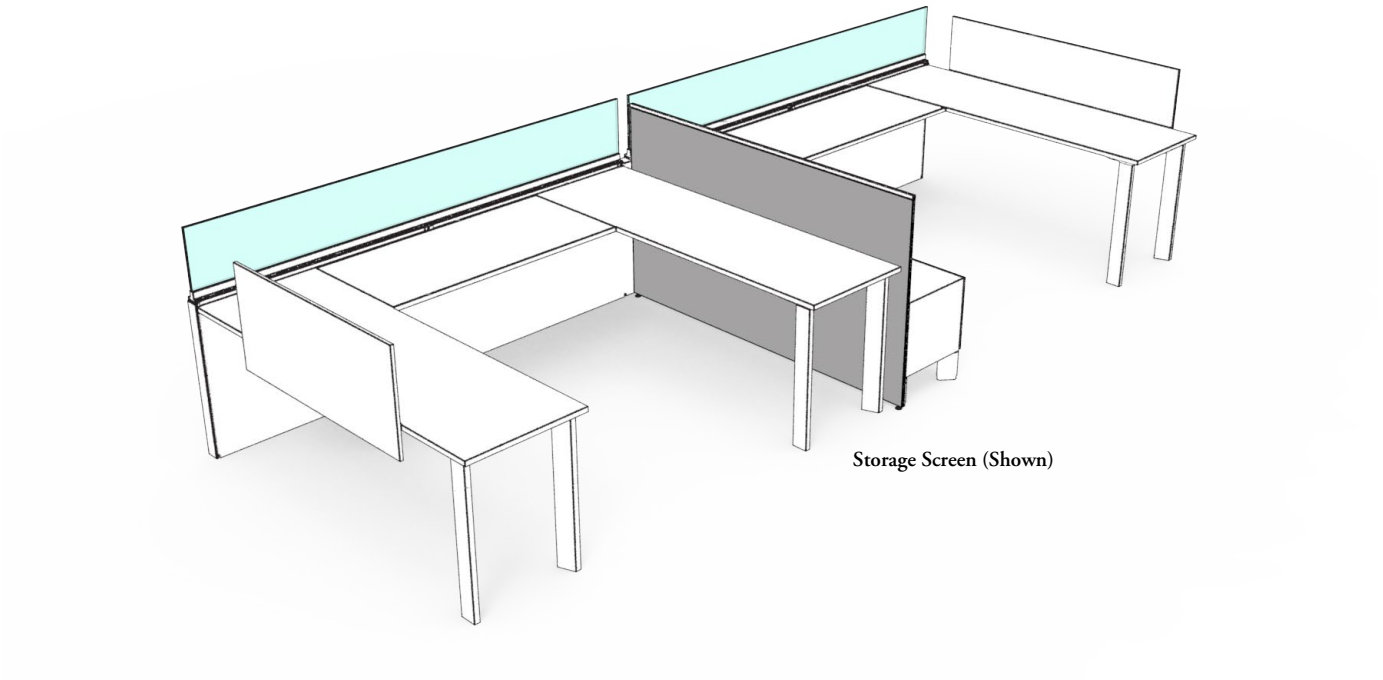

gapping

The Floor Screen is mounted with a 1" gap for cable management.

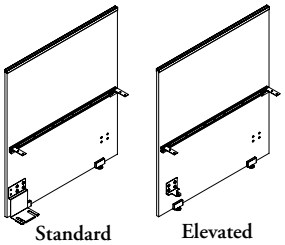

storage screen basics

The following outlines the features of the Storage Screen.

Storage Screen (Shown)

Standard Elevated

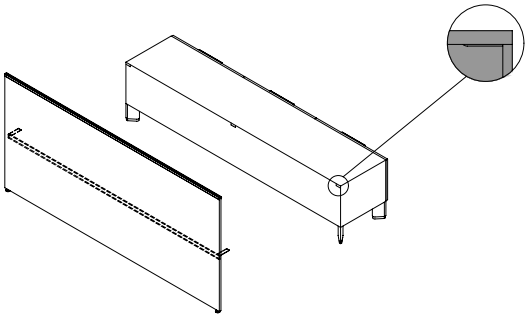

Storage Screen (UNSSS)

- Mounts to 21" high and 28" high storage credenzas to provide casual space division
- Heights:
  - 42"h
  - 51"h
  - 57"h
- Widths:
  - 24", 30"-96" in 1" increments
- The screen mounts into the slots on the back of credenzas or storage
- Has a leveling range of 0.5 down and the brackets allow it to remain attached to storage
- On storage less than 60" wide, the screen should be specified to span the entire width of the cabinet and on storage 60" wide and over, the screen can mount off-module and be specified shorter

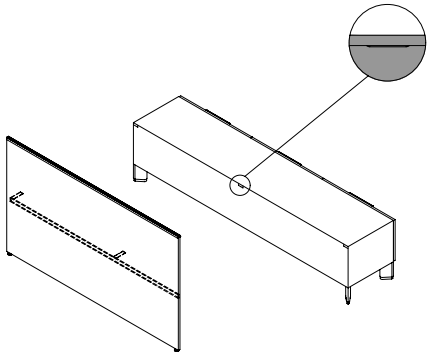

planning with storage screens

The following should be considered when planning with Storage Screens.

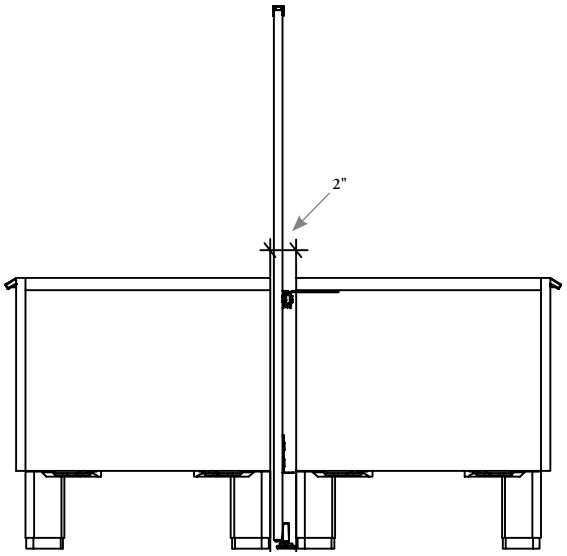

The Storage Screen mounts into the slots on the back of low and high credenzas and storage units.

- Mounts on credenzas less than 60" wide, the screen must span the entire width of the storage

- Mounts on storage 60" wide and over, an additional slot is provided in the center of the credenza for off-module mounting
- To mount off-module, the screen must be at least half the width of the storage and must be flush to one end of the cabinet to align with slot location. The screen can **not** extend past the end of the storage

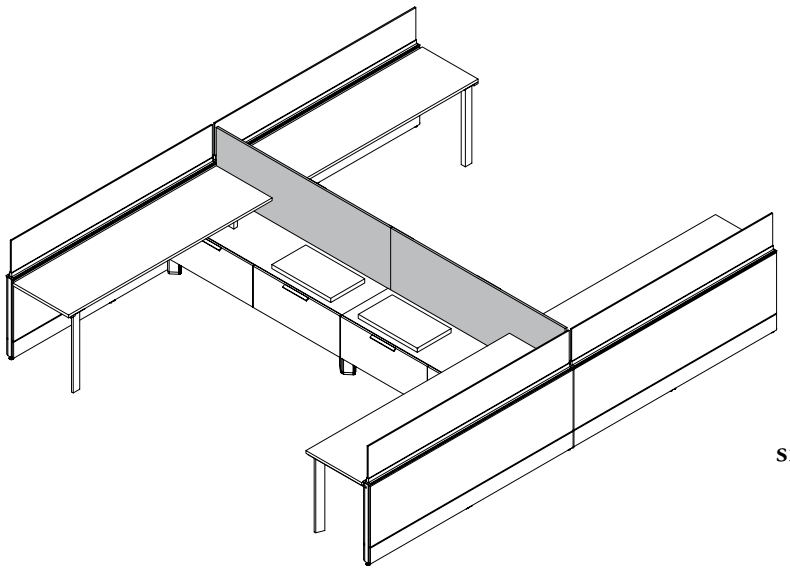

- When a screen is used between two credenzas the screen will mount only to the back of one credenza
- A 2" gap is required between credenzas for mounting

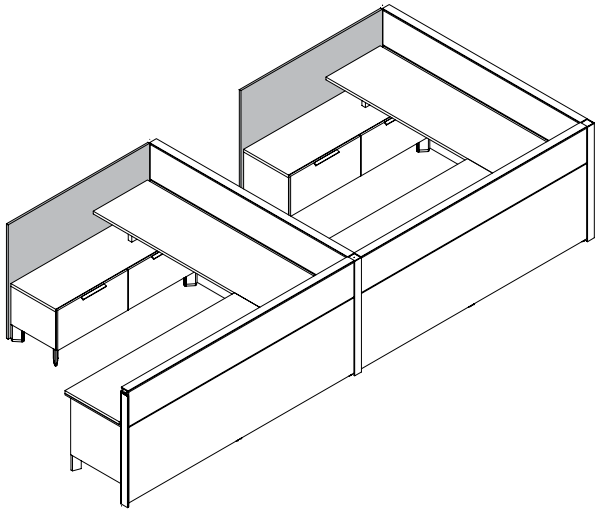

storage screen typicals

The following typicals demonstrate planning options for the storage screen.

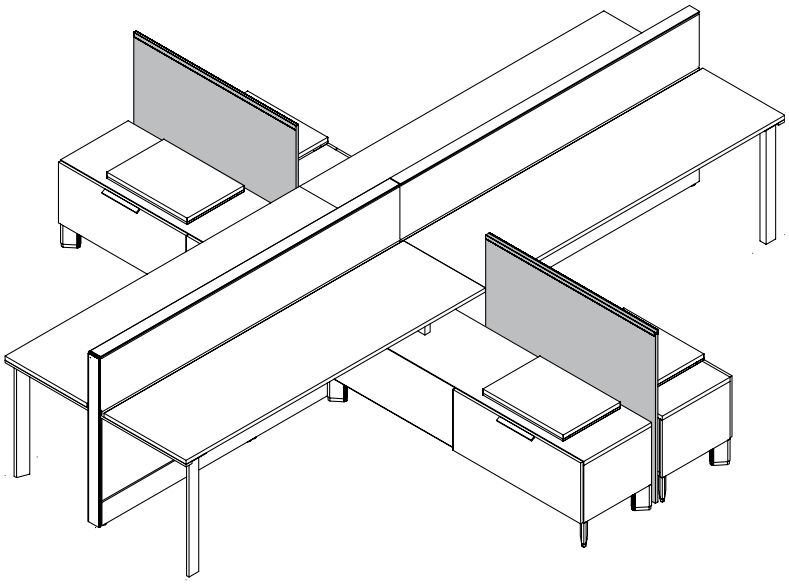

double storage spine (full width)

single corridor screen (full width)

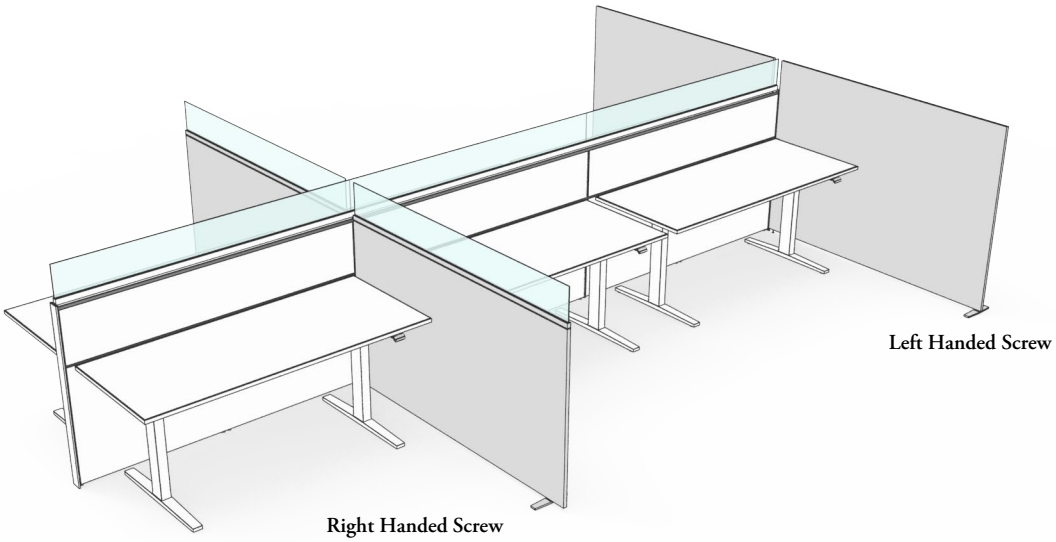

double storage wing divider (off-module)

lateral floor screens basics

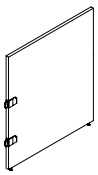

The Solid Lateral Screen is used with District Panels or Power Spine to provides a clean aesthetic and allows for seated privacy between users.

Left Handed Screw

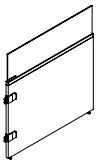

Right Handed Screw

- The screen thickness is 1"
- A stability foot is included on screens 48" and wider

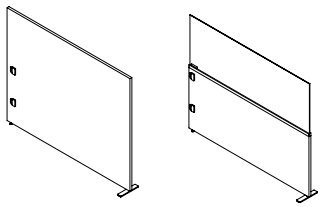

Lateral Floor Screen Solid (UZSS)

- A solid screen with no glass
- Height: 29", 42, 51", 57
- Depth: 24", 30", 36", 42", 48", 60", 72"

Lateral Floor Screen with Glass (UZSG)

- A solid screen with a glass top
- Height:
  - 42" Total (31" plus 11" glass) (G)
  - 51" Total (44" plus 7" glass) (K)
  - 51" Total (31" plus 20" glass) (M)
  - 57" Total (44" plus 13" glass) (N)
  - Inset 42" Total (29" plus 13" glass) (D)
  - Inset 51" Total (42" plus 9" glass) (E)
  - Inset 51" Total (29" plus 22" glass) (F)
  - Inset 57" Total (42" plus 15" glass) (H)

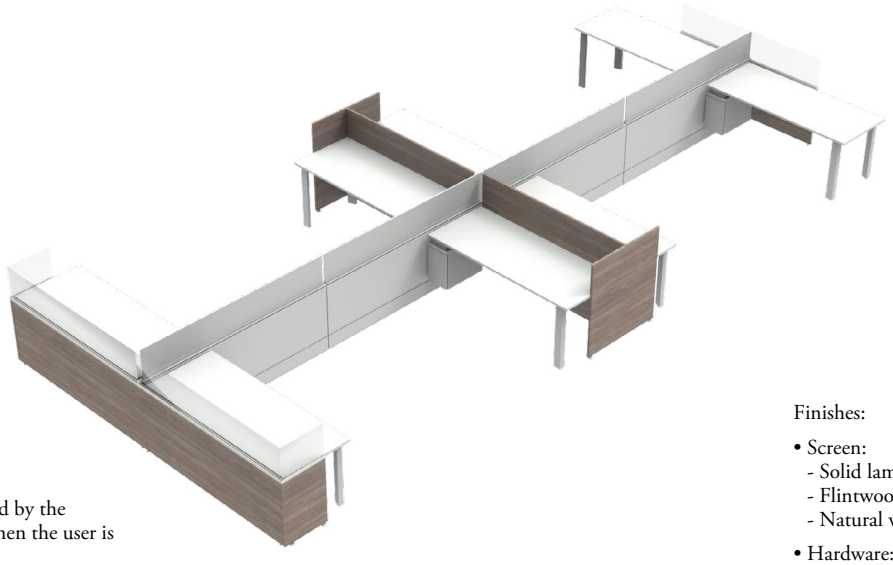

Left Left

- The left handed orientation will have the mounting brackets on the right
- The right handed orientation will have the mounting brackets on the left
- It is especially important at the end condition. If it is specified with the incorrect handedness, the screen will sit in 1/2" from the end

lateral floor screens with return basics

Lateral floor screens with returns attach perpendicularly to the panel frame to provide privacy at ends and between users.

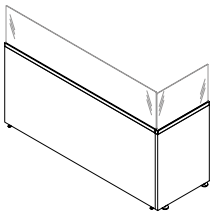

- Lateral floor screens are available for end and mid run applications
- Available solid or with glass
- Provide support to panel runs
- Lateral Floor Screens are not available for Zig Zag or 120 Power Spine configurations
- Compatible with Lateral Power Spine and Floor Flush Power Spine

- Handedness:
  - Left
  - Right
  - Not applicable
  - Handedness is determined by the location of the bracket when the user is facing the workstation
- Screen Support:
  - None - available on 24, 30, 36" and 42"w
  - Foot/Bracket -required on 48", 60" and 72"w screens
  - Worksurface connection
- Not designed to support a worksurface
- The solid portion of the screen and the panel height should be the same for proper connection

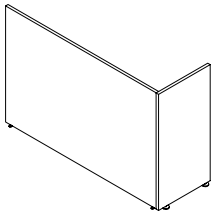

Finishes:

- Screen:
  - Solid laminate
  - Flintwood (horizontal grain pattern)
  - Natural veneer
- Hardware:
  - Foundation
  - Mica
  - Accent
- Glass Finishes:
  - Clear
  - Frost

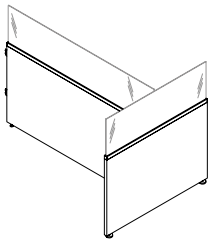

Lateral Floor Screen with Glass, with Return (UZRG)

- A solid screen with glass and a return
- Bracket Attachments:
  - End Mounted Single
  - End Mounted Double
  - Mid Spine
- Height:
  - 42" Total (31" plus 11" glass) (G)
  - 51" Total (44" plus 7" glass) (K)
  - 51" Total (31" plus 20" glass) (M)
  - 57" Total (44" plus 13" glass) (N)
  - Inset 42" Total (29" plus 13" glass) (D)
  - Inset 51" Total (42" plus 9" glass) (E)
  - Inset 51" Total (29" plus 22" glass) (F)
  - Inset 57" Total (42" plus 15" glass) (H)
- Screen Depth: 48", 49", 50", 60", 61", 62", 72", 73", 74"
- Return Depth: 18", 20", 24", 25", 30", 31"

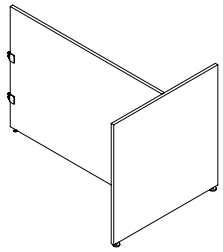

Lateral Floor Screen with Solid, with Return (UZRS)

- A solid screen with no glass and a return
- Bracket Attachments:
  - End Mounted Single
  - End Mounted Double
  - Mid Spine
- Height: 29", 42", 51", 57"
- Screen Depth: 48", 49", 50", 60", 61", 62", 72", 73", 74"
- Return Depth: 18", 20", 24", 25", 30", 31"

Lateral Floor Screen with Glass, with Shared Return (UZCG)

- A solid screen with glass and a shared return
- Bracket Attachments:
  - Mid Spine
- Height:
  - Inset 42" high total (29" Solid, 13" Glass) (D)
  - Inset 51" high total (42" Solid, 9" Glass) (E)
  - Inset 51" high total (29" Solid, 22" Glass) (F)
  - Inset 57" high total (42" Solid, 15" Glass) (H)
- Screen Depth: 48", 49", 50", 60", 61", 62", 72", 73", 74"
- Return Depth: 36", 40", 48", 50", 60", 62"

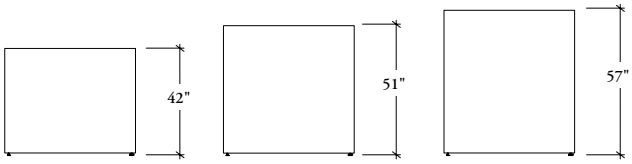

Lateral Floor Screen with Solid, with Shared Return (UZCS)

- A solid screen with no glass and a shared return
- Bracket Attachments:
  - Mid Spine
- Height: 29", 42", 51", 57"
- Screen Depth: 48", 49", 50", 60", 61", 62", 72", 73", 74"
- Return Depth: 36", 40", 48", 50", 60", 62"

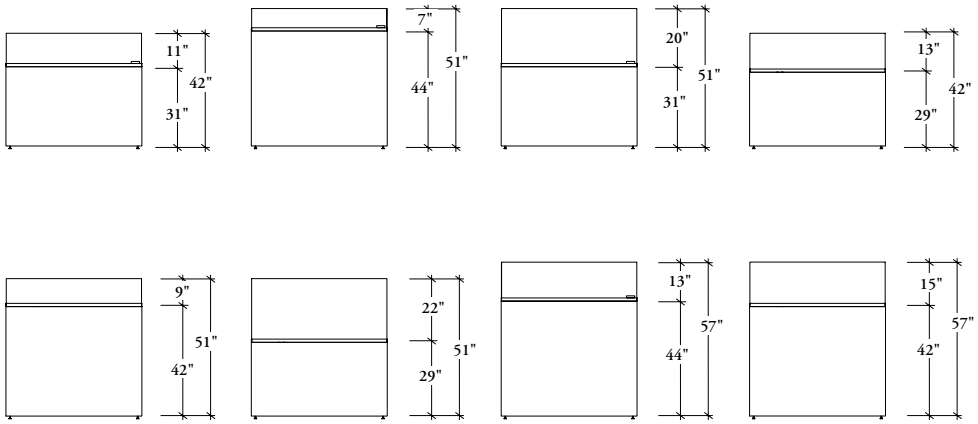

planning with end mount lateral screens

End Mount Lateral Floor Screens are available in the following heights to provide various levels of privacy.

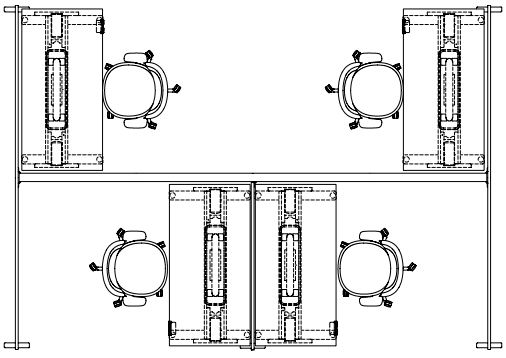

Solid

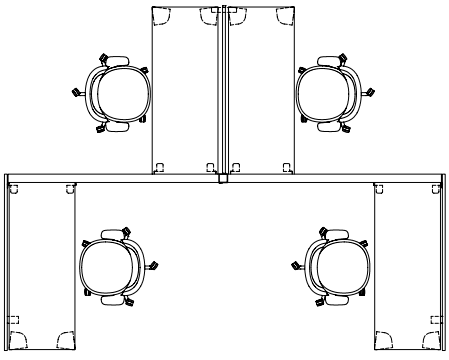

Solid with Glass

End Mount Lateral Screens can be used with or without a support foot.

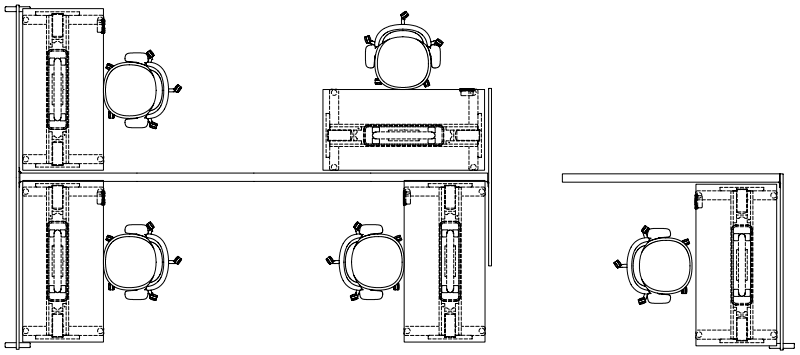

The support foot is required when
- the screen is 48" wide or wider and not attached to a worksurface

The support foot is not required when
- the screen is attached to a fixed worksurface
- the screen is 42"wide or less

planning with end mount lateral screens (continued)

Screens can be used in the following locations

EB ED ES

EB – End Mounted Double

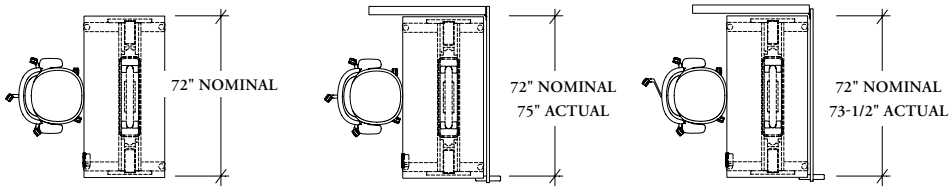

- used on the outside of a workstation
- extends half way across the end of a panel run
- actual size = nominal size + 1-1/2"

ED – End Mounted Share

- shared on the outside of two workstations
- mounts centered to the end of a panel run
- actual size = nominal size + 1-1/2"

ES - End Mounted Single

- used on the outside of a single workstation
- extends completely across the end of a panel run
- actual size = nominal size + 3"

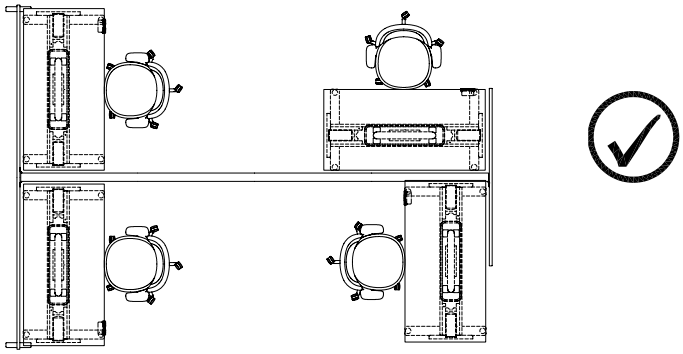

EB ES

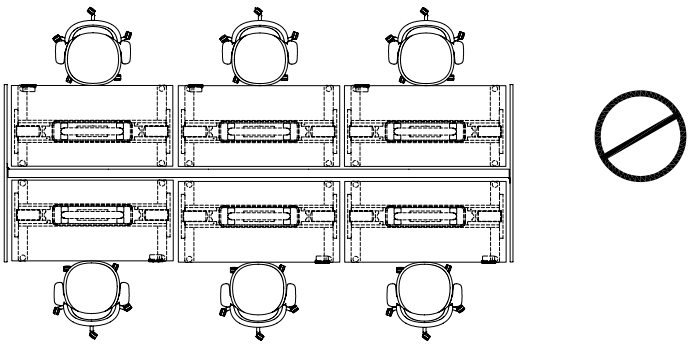

Regardless of the type of End Mount Lateral Screen used, the nominal dimension from the panel wall remains the same, allowing for a consistent footprint on all workstations.

planning with end mount lateral screens (continued)

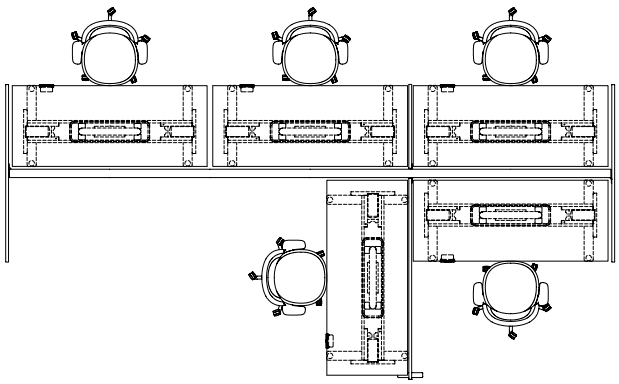

End Mount Lateral Screens can provide panel support in place of return panels with the following restrictions:

- The maximum number of panel sections is four and the overall length does not exceed 192" (ex. 4 x 48"sections = 192")
- The maximum number of panels sections is three when 60"w. panels are used and the overall length does not exceed 180" (ex. 3 x 60" sections - 180")
- Panel heights to do not exceed 51"h.
- District panels over 60"w are made up of two segments so a 96" wide panel is considered 2" - 48" wide segments

End Mount Lateral Floor Screens will not support a span of five or more segments, regardless of the width of each segment even if the overall length is less than 192".

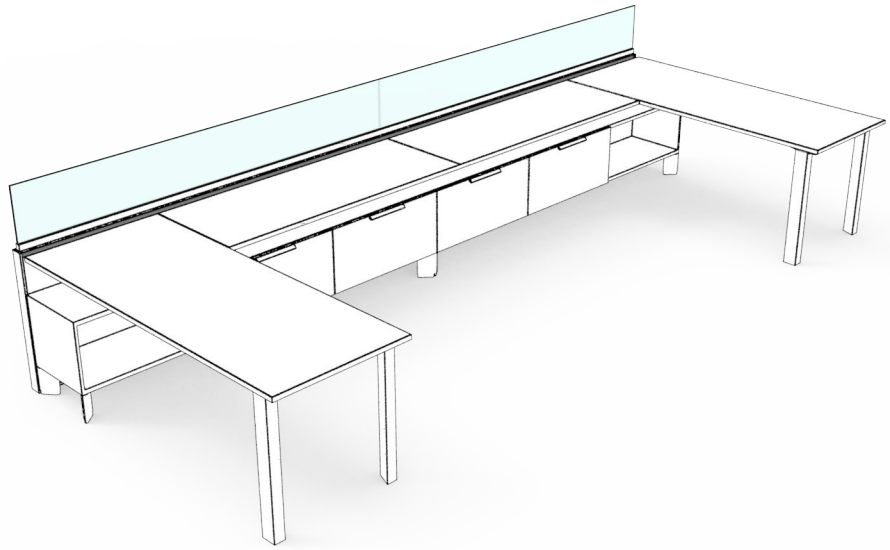

This example demonstrates how additional End Mount Lateral Screens can provide the panel support required.

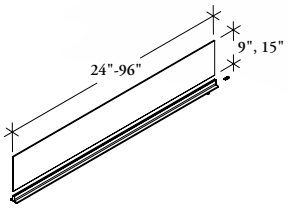

example: double end screens and mid run screens

- there are no unsupported runs of more than four segments and the run does not exceed 192" without an additional screen

panel wall add-on screen basics

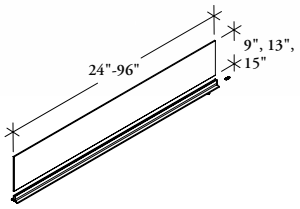

The Panel Wall Add-On Screen provides a casual option for finishing the top level of panel walls.

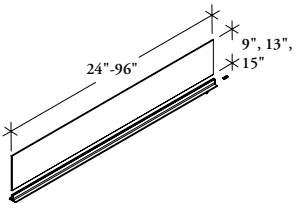

Panel Wall Add-On Screen – Solid (UNSPS)

- Provides a light frameless alternative to a solid fascia at the top of a panel
- Available in solid finish
- Can be mounted on- or off-module, or span two panel walls but **cannot** span a 180˚ spacer or 90˚ connection
- Replaces the top trim of the same width on the panel wall
- The support frame is visible above the Top Trim

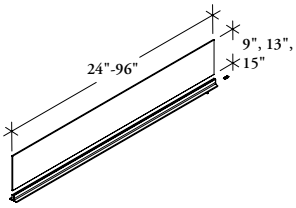

Panel Wall Add-On Screen – (UNSPG)

- Provides a light frameless alternative to a window at the top of a panel
- Glass is 10mm thick
- Can be mounted on- or off-module, or span two panel walls, cannot span a 180˚ spacer or 90˚ connection
- Replaces the top trim of the same width on the panel wall
- The support frame is visible above the Top Trim
- Available in heights of 9", 13" and 15"
- Available in widths of 24" to 96" in 6" increments
- Available in clear and specialty glass finishes

Panel Wall Add-On Screen – 6mm Glass (UNSPF)

- Provides casual space division and privacy with a slim frame less add-on screen at the top of panel
- Glass is 6mm thick
- Can be mounted on- or off-module, or span two panel walls, cannot span a 180˚ spacer or 90˚ connection
- Available in heights of 9", 13" and 15"
- Available in widths of 24" to 96" in 6" increments
- Available in clear and frosted glass finishes

Smooth Felt Add-On (UNSPZ)

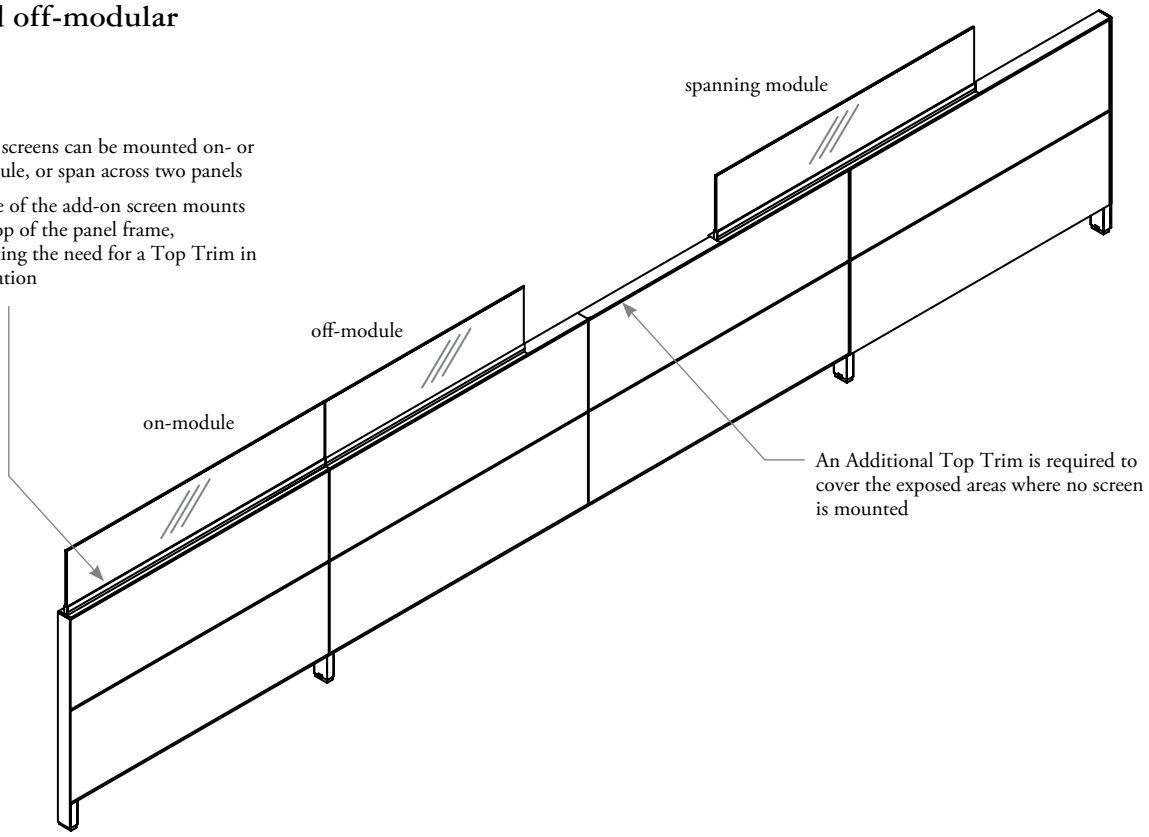

- Provides casual space division and privacy with a slim frame less add-on screen at the top of panel
- Smooth Felt Screen
- Can be mounted on- or off-module, or span two panel walls, cannot span a 180˚ spacer or 90˚ connection
- Available in heights of 9", 13" and 15"
- Available in widths of 24" to 96" in 6" increments
- Available in Admiral Blue (QR), Lunar (R6), Pewter (R5), River Rock (QT), Sumac (QS)

planning with wall panel add-on screens

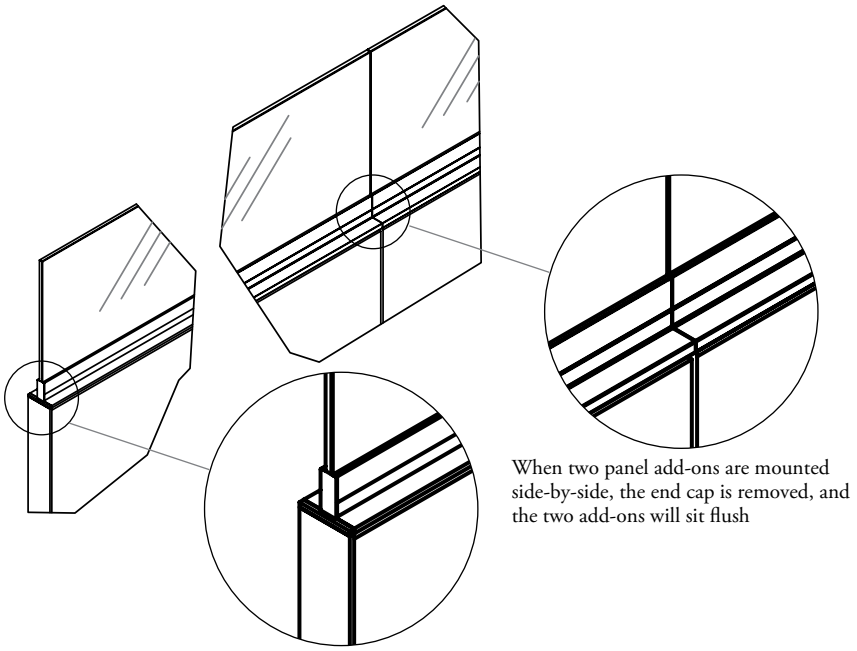

The following should be considered when planning with add-on screens.

on- and off-modular

- Add-on screens can be mounted on- or off-module, or span across two panels
- The base of the add-on screen mounts to the top of the panel frame, eliminating the need for a Top Trim in that location

add-on screen end caps

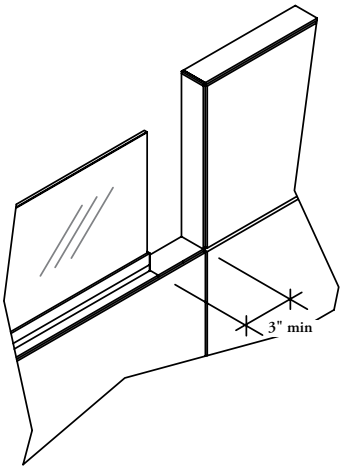

When two panel add-ons are mounted side-by-side, the end cap is removed, and the two add-ons will sit flush

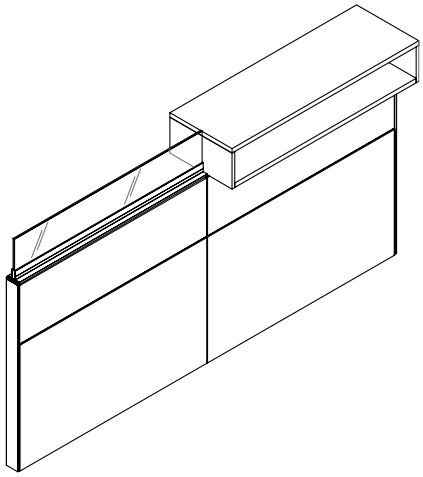

Screens are complete with end caps to finish the trim, and sit beyond the add-on screen and over the end trim to create a finished end condition

planning with wall panel add-on screens (continued)

change of height conditions

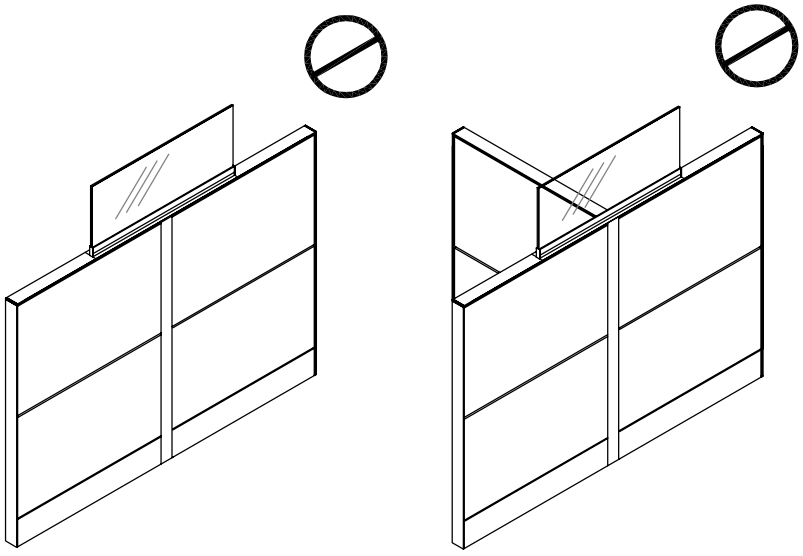

- When mounting panel add-on screens in change-of-height panel configurations, the add-on must start a minimum of 3" from the edge of the panel to allow for the Intermediate Trim thickness and a Top Trim must be ordered to fill the remaining width
- Top trim widths required below 24" are cut to size on site. The cut end should be applied against the adjoining panel, as the intermediate end trim will conceal the cut edge

- When the change of height is due only to center-mounted storage and **not** a panel height change, the panel add-on can span the width of the frame it is mounted to

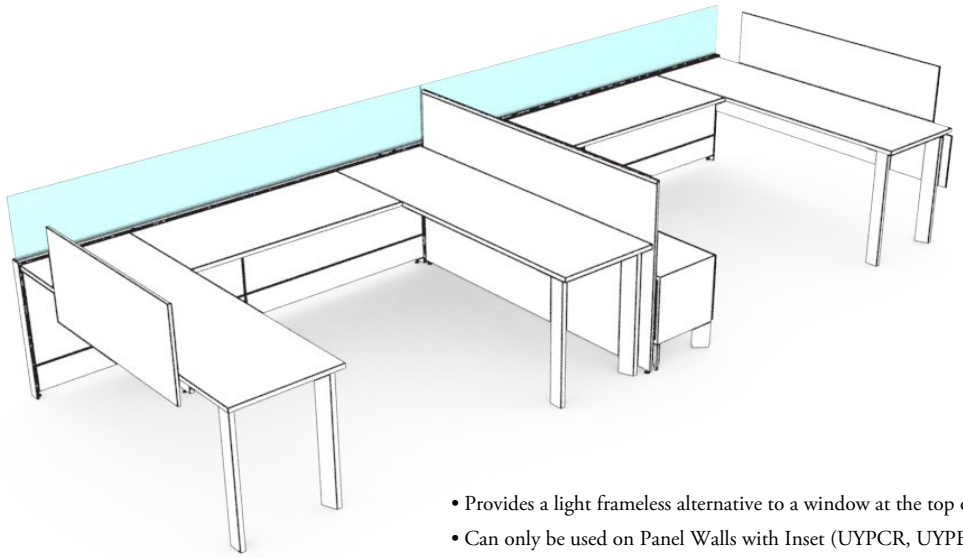

spanning connectors

An add-on screen **cannot** span over a 180˚ or 90˚ connection

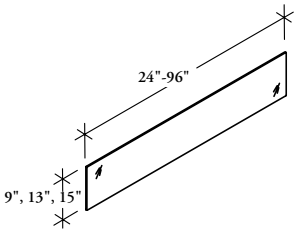

glass blades for panels with inset basics

The Glass Blade for Panels with Inset Glass provides a casual option for finishing the top level of panel walls. The Glass Blade recesses into the panel frame so less trim is visible.

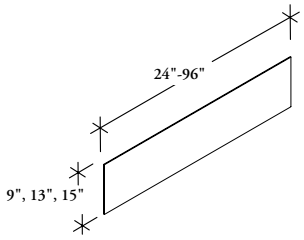

- Ten applications are available:
  - Both Standard
  - One Side Corner
  - One Side Notch
  - One Side Extended
  - Both Side Corner
  - Both Side Notch
  - Both Side Extended
  - Extended and Notch
  - Corner and Notch
  - Corner and Extended

- Provides a light frameless alternative to a window at the top of a panel
- Can only be used on Panel Walls with Inset (UYPCR, UYPER and UYPFR)
- Available with Standard Clear and Specialty Frost, white or Cool White Glass
- Can be mounted on- or off-module or span two panel walls

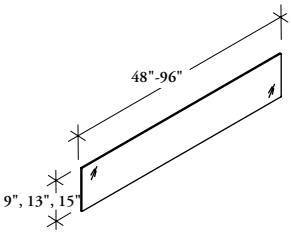

Panel Glass Blade for Panels with Inset Glass (UYSPG)

- Provides a glass blade inset into a panel frame without any exposed top trim
- Glass is 10mm thick
- Top trim must be specified separately, Panel Top Trim for Panels with Inset Glass (UYTT)

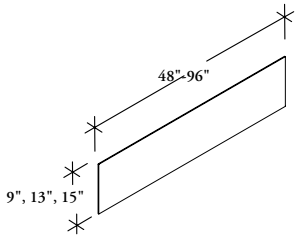

Panel Glass Blade for Panels with 6mm Inset Glass (UYSPF)

- Provides a 6mm thick glass blade inset into a panel frame without any exposed top trim
- Top trim must be specified separately, Panel Top Trim for Panels with Inset Glass (UYTT)
- Screen finishes includes clear glass and frost glass

Bridged Glass Blade for Panels with Inset Glass (UYSCG)

- Provides an inset glass blade that spans over two panels being connected by a three-way connector
- Glass is 10mm thick
- Top trim must be specified separately, Bridged Top Trim for Panels with Inset Glass (UYCT)
- Widths are nominal and account for the 3" width of the three-way connector

Bridged Glass Blade for Panels with 6mm Inset Glass (UYSCF)

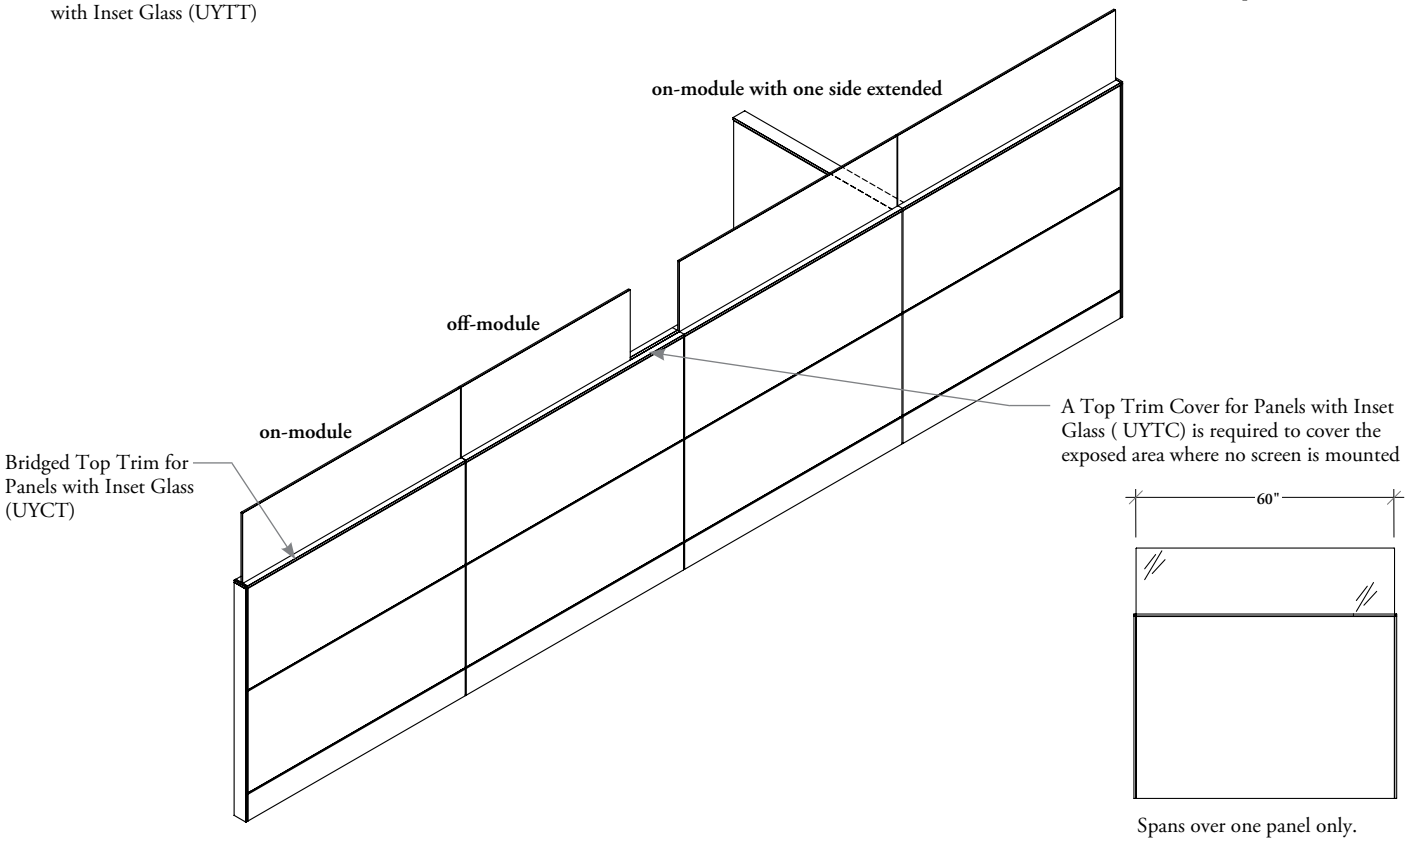

- Provides a 6mm thick inset glass blade that spans over two panels being connected by a three-way connector
- Top trim must be specified separately, Bridged Top Trim for Panels with Inset Glass (UYCT)
- Screen finishes includes clear glass and frost glass
- Widths are nominal and account for the 3" width of the three way connectors

planning with glass blades for panels with inset

The following should be considered when planning with Glass Blade for Panels with Inset.

panel glass blade

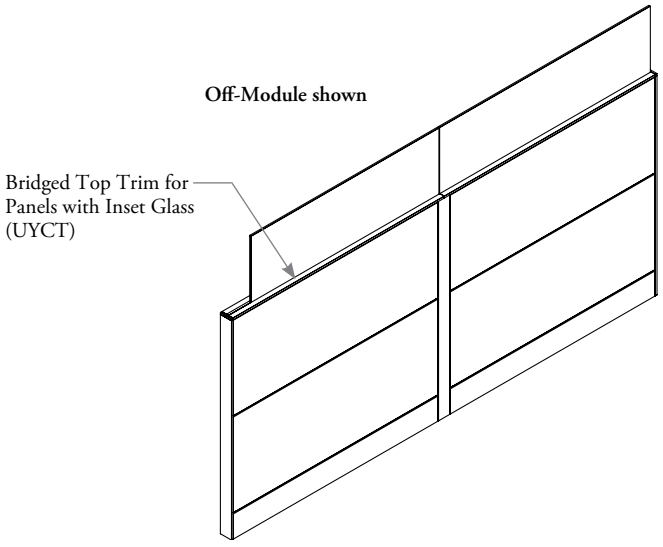

- Can be on- or off-module and can span across two panels
- The base of the Inset Glass must be embedded into a Panel Wall with Inset (UYPCR, UYPER and UYPFR) and must be used with the Panel Top Trim for Panels with Inset Glass (UYTT)

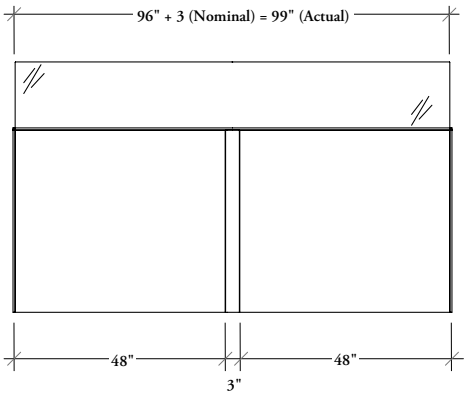

Spans over one panel only.

bridged glass blade

- Bridged Glass Blade for Panels with Inset Glass spans across two panels connected by a three-way connector, and can be mounted on- or -off module
- The base of the inset glass must be embedded into a Panel Wall with Inset (UYPCR, UYPER and UYPFR) and must be used with Bridged Top Trim for Panels with Inset Glass (UYCT)
- When planning off-module it is recommended that the exposed top trim be covered by Bridged Top Trim for Panels with Inset Glass (UYCT)

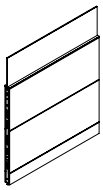

- Widths are nominal and account for the 3" width of the Three-Way connector. For example, 96" wide (Nominal) = 99"(Actual)

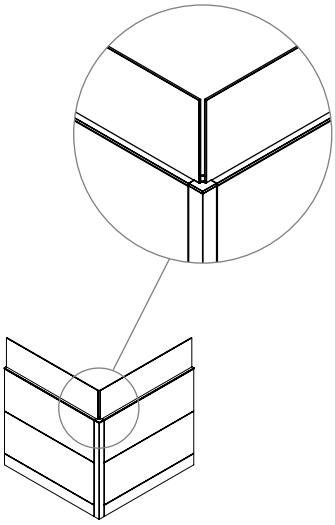

planning with glass blades for panels with inset (continued)

There are ten application available when planning with Glass Blades for Panels with Inset Glass:

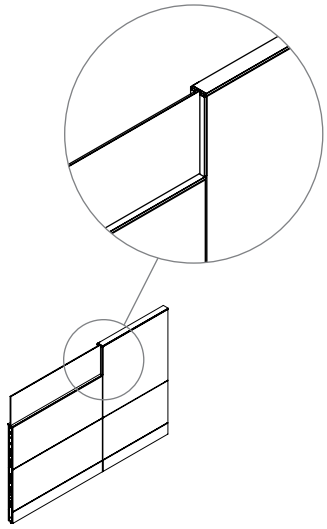

Both Standard (S)

Used when beside other panels with Inset Glass Blade and no extension is required on when the panel beside it has no glass blade.

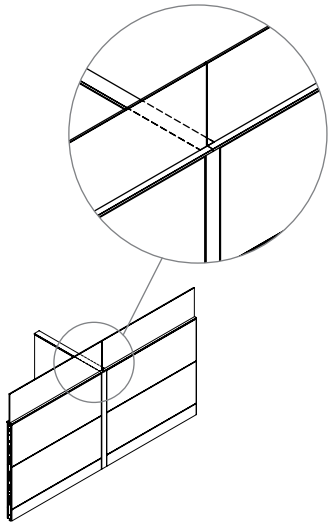

One Side Corner (G)

Used on a corner to reduce the gap between glass blades. Must be used with Two-Way 90˚ Corner Gap for Panels with Inset Glass (UYPC2).

One Side Notch (K)

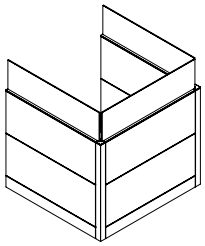

Used when planned against an Intermediate End Trim.

One Side Extended (E)

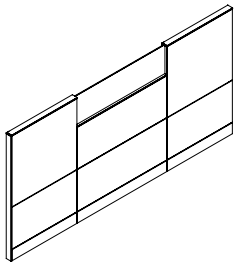

Extends 1-1/2" over a Three-Way Connector. Must be used with a second Glass Blade with Side Extended to cover the full Three-Way connector. The cap on Three-Way connector is removed to have both glass blades extend over it.

planning with glass blades for panels with inset (continued)

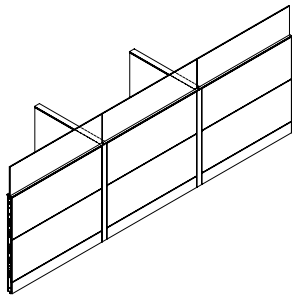

Both Side Corner (C)

Used when both ends are on a corner to reduce the gap between glass blades. Must be used with Two-Way 90˚ Corner Gap for Panels with Inset Glass (UYPC2).

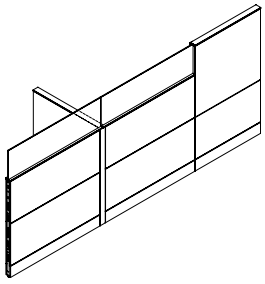

Both Side Notch (N)

Used when planned between two Intermediate End Trims.

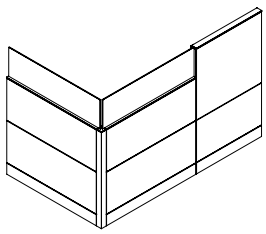

Both Side Extended (B)

Used to run 1-1/2" over a Three-Way Connector on either end. Must be used with a second Glass Blade with side Extended to cover full the Three-Way connector on each side.

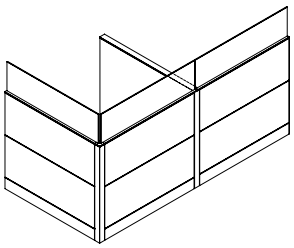

Extended and Notch (F)

Used to extend 1-1/2" over a Three-Way Connector on one end and against an Intermediate End Trim on the other. The Top cap on the Three-Way connector is removed to have both glass blades extend over it.

Corner and Notch (H)

Used when one end is on a corner to reduce the gap between glass blades and the other end is against an Intermediate End Trim. Must be used with Two-Way 90˚ Corner Gap for Panels with Inset Glass (UYPC2).

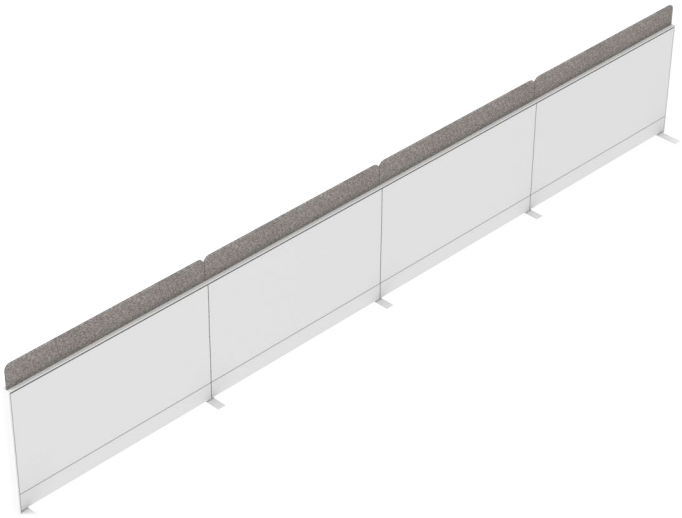

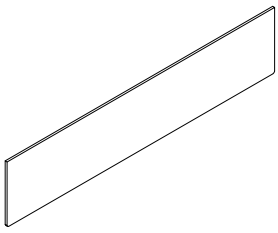

Corner and Extended (D)

Used when one end is on a corner to reduce the gap between glass blades and the other end extended 1-1/2" over a Three-Way Connector. Must be used with a second Glass Blade with side Extended to cover the full Three-Way connector. The Top cap on the Three-Way Connector is removed to have both glass blades extend over it. Must be used with Two-Way 90˚ Corner Gap for Panels with Inset Glass (UYPC2).

blades for panels with inset basics

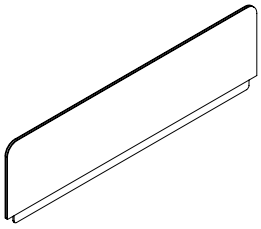

The Smooth Felt/Infinity Blade for Panels provide a casual option for finishing the top level of panel walls and recesses into the panel frame so less trim is visible.

Smooth Felt Blade for Panels with Inset (UYSPZ)

- Provides a Smooth Felt Blade inset into a panel frame without any exposed top trim
- Smooth Felt blade is 10mm thick
- Top trim must be specified separately, Panel Top Trim for Panels with Inset Glass (UYTT)

Infinity Blade for Panels with Inset (UYXD)

- Provides an Infinity blade inset into a panel frame without any exposed top trim
- Infinity Blade is 6mm thick
- Top trim must be specified separately, Panel Top Trim for Panels with Inset Glass (UYTT)

CONNECTOR & TRIM CONFIGURATIONS 165

PLANNING WITH CONNECTORS & TRIMS 167

understanding trims & connectors

Trims and connectors are required to finish the tops, ends and corners of District Panel Walls and Add-On Windows.

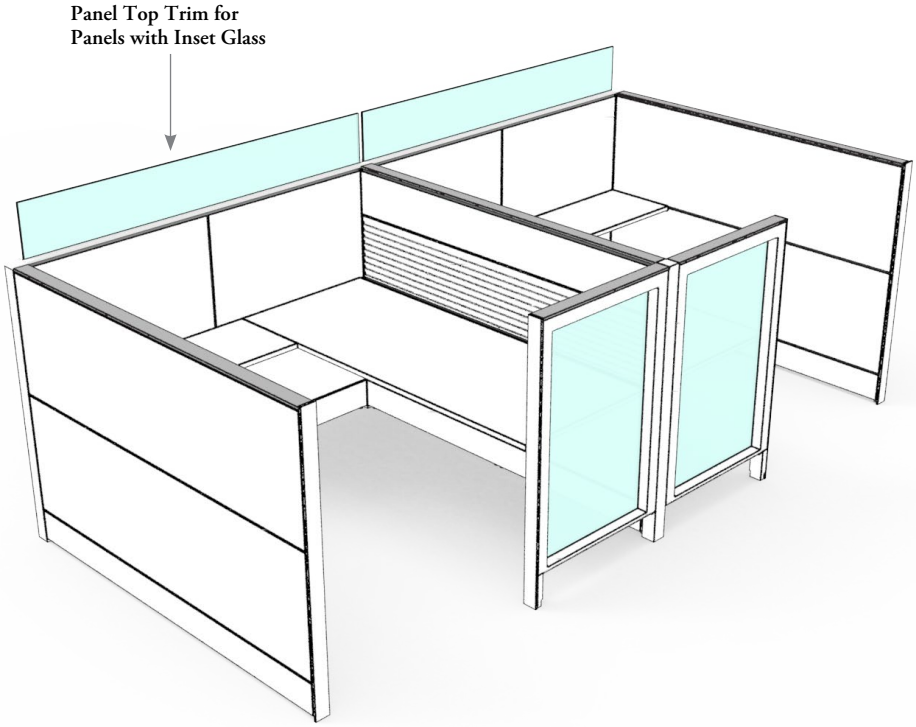

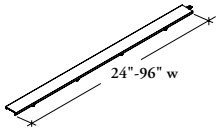

1. Corner connectors include brackets, trims and corner caps.
2. All trims are bolted to the panel wall for positive engagement and alignment.
3. Corner connectors are specified to match the panel type that they are being used with (ex. Flush/Convertible-to- Flush/Convertible, Elevated-to-Elevated, or Flush/Convertible-to-Elevated.
4. All panel wall connections are on-module.
5. Top trims are available up to 96" wide to span across all widths of panels including those made up of two sections.
6. Connectors are available for two-, three- and four-way connections as well as 180˚ connections.
7. Panel Top Trim for Panels with Inset Glass allows Panel Glass Blade for Panels with Inset Glass (UYSPG) to sit inset into a panel.

top trim basics

The following outlines the features of each of the top trims available in District.

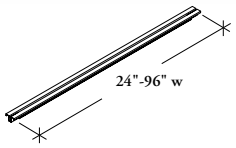

Top Trim (Shown)

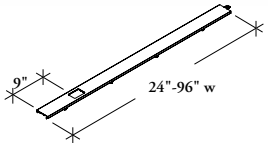

Top Trim (UNTT)

- A full width trim on the top of a panel wall or add-on window
- 7/16" thick

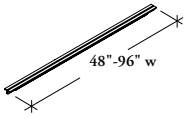

Panel Top Trim for Panels with Inset Glass for 6mm or 10mm (UYTT)

- Allows Panel Glass Blade for Panels with Inset Glass (UYSPG) to be inset into a panel wall
- Available in Both Extended, One Side Extended and Both Standard applications
- Must be used on Panel Wall with Inset (UYPCR, UYPER and UYPFR)
- Available in Foundation, Mica and Accent colors

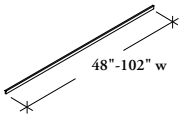

Top Trim – Power Pole Access (UNTTP)

- Same as the Top Trim except with a cut out to allow a Power Pole to be installed off-module 9" from a panel end
- Non-handed

Bridged Top Trim for Panels with Inset Glass for 6mm or 10mm (UYCT)

- Allows Bridged Glass Blade for Panels with Inset Glass (UYSCG) to be inset into the panel wall while spanning over two panels attached by a three-way connector
- Optional brackets are available on one or both sides to connect to related end trim
- Available in Both Extended, One Side Extended and Both Standard applications
- Widths are nominal and account for the 3" width of the three-way connector
- Available in Foundation, Mica and Accent colors
- Non-handed

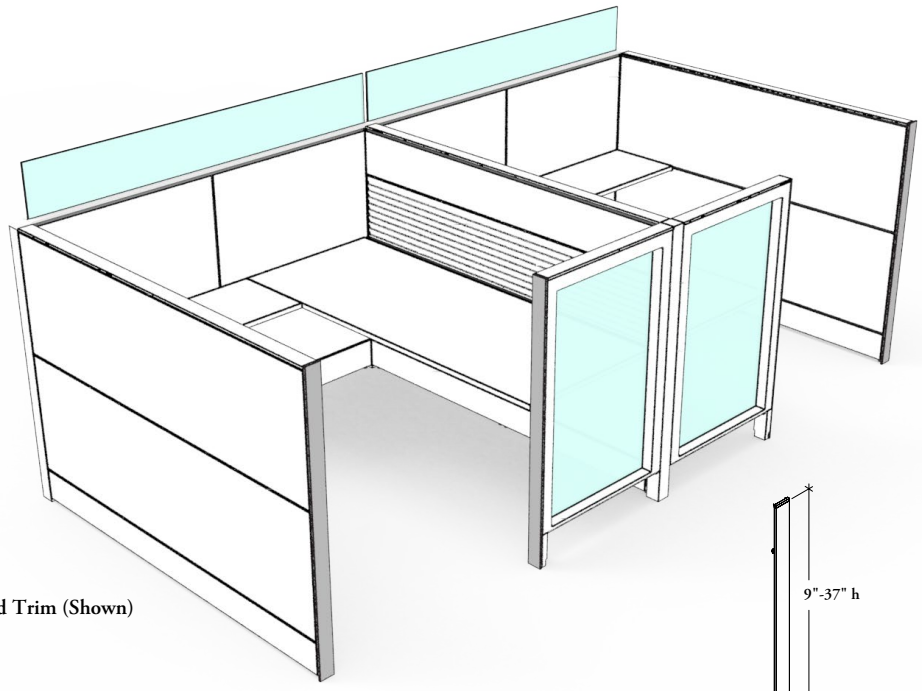

Top Trim Cover for 6mm or 10mm (UYTC)

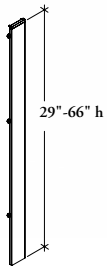

- Used to fill exposed sections on Panel Top Trim for Panels with Inset Glass (UYTT) or Bridged Top Trim for Panels with Inset Glass (UYCT)
- Cut on site

end trim basics

The following outlines the features of each of the end trims available in District.

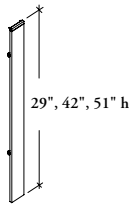

End Trim (Shown)

End Trim (UNTE)

- A full-height trim that conceals the end of a panel wall
- Heights matches the heights of Flush and Elevated Panel Walls and Convertible Walls
- Required to cover the full height of a panel wall, including add-on window and full-height window, if applicable
- Can be used on panel walls with or without Accessory Beam

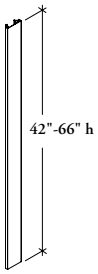

End Trim for Freestanding District (UATE)

- Used in freestanding applications to accommodate the support foot gaps
- Available in Mica and Foundation finishes
- Can be used on panel walls with or without Accessory Beam

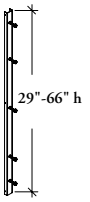

Intermediate End Trim (UNTM)

- Conceals an exposed portion of a panel wall, add-on window or full-height window in a change-of- height location

Transition Cover (UNTC)

- Used to provide a seamless vertical trim cover when an intermediate panel connection occurs above a full panel connection

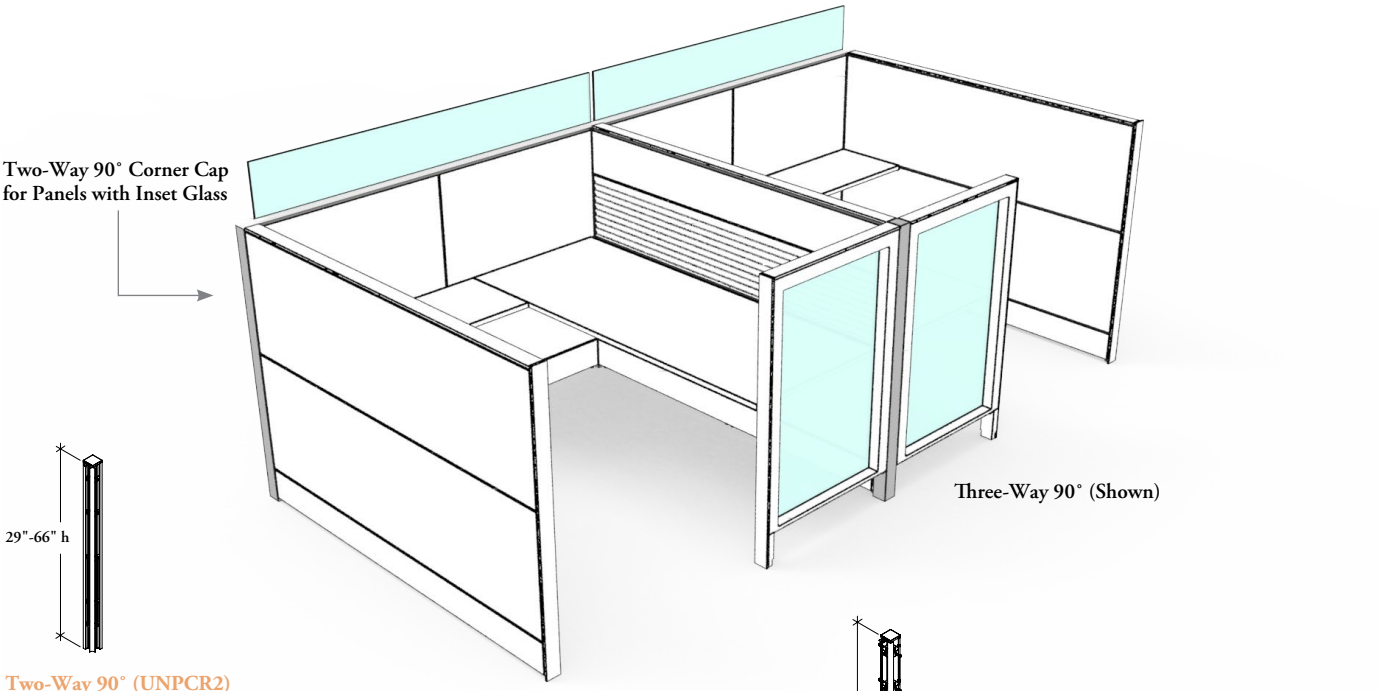

Wall Start (UNPCW)

- Used to connect either elevated or standard Panel Walls (no corners) to reinforced drywall
- Foot is specified separately for elevated Panel Walls at the wall start connector point

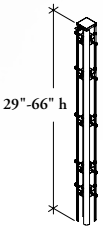

connector basics

The following outlines the features of each of the connectors available in District.

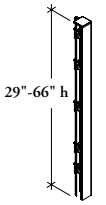

Two-Way 90° (UNPCR2)

- Connection is used to connect two panel walls and windows at 90° in same panel height or varying panel height configurations
- For change of heights, the connector is specified for the lowest height panel
- Available with options for connecting Flush, Elevated or Convertible Panel Walls

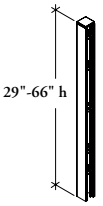

Four-Way 90° (UNPCR4)

- Connection is used to connect four panel walls and full-height windows at 90° in same panel height or varying panel height configurations
- Used for change of heights, the connector is specified for the lowest height panel wall
- Available with options for connecting Flush, Elevated or Convertible Panel Walls

Three-Way 90° (UNPCR3)

- Connection is used to connect three panel walls at 90° in same panel wall height or varying panel wall height configurations
- Used for change of heights, the connector is specified for the lowest height panel wall
- Available in two configurations:
  - (1) one vertical cover and top cap which completely finishes the connection when no Intermediate 180° Connector (UNIC3) will be used above it
  - (0) no vertical cover or top cap is used for change-of-height connections when an Intermediate 180° Connector (UNIC3) is used above it, a separate Transition Cover (UNTC) must be ordered
- Available with options for connecting Flush, Elevated or Convertible Panel Walls

Two-Way 180° Spacer (UNPCCR)

- Connection is used when a spacer is required between two panel walls,
  full-height windows or add-on windows joined at 180° to match either panel wall lengths or to provide a needed space for screens etc.
- Used for change of heights, the connector is specified for the lowest height panel wall
- Available with options for connecting Flush, Elevated or Convertible Panel Walls
- In most layouts no spacer is needed, panel walls are bolted together with 0" gap

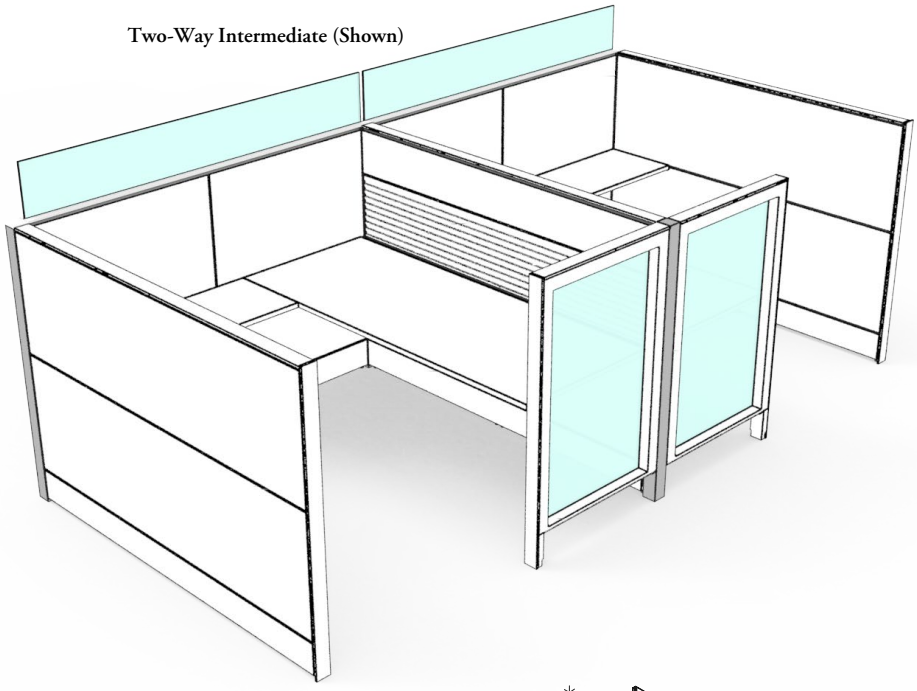

Two- Way 90° Corner Cap for Panels with Inset Glass for 6mm or 10mm (UYPC2)

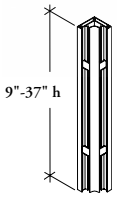

- Used with Two-Way 90° (UNPCR2) and replaces the cap on existing connector to accommodate Panel Top Trim for Panels with Inset Glass (UYTT) and Panel Glass Blade for Panels with Inset Glass (UYSPG) in a corner application
- Available in Clear Anodized, Foundation and Mica

connector basics (continued)

The following outlines the features of each of the connectors available in District.

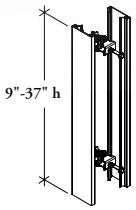

Two-Way Intermediate (Shown)

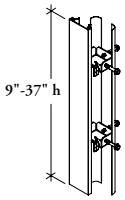

Two-Way Intermediate 90° (UNIC2)

- Connection is used to fill the exposed ends of panel walls above a three-way or four-way connection in a change-of-height configuration

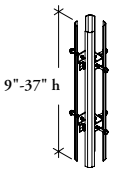

Two-Way Intermediate 180° (UNICC)

- Connections is used to fill the exposed ends of panel walls or add-on windows above a 180° spacer in change-of-height configurations
- Available in two configurations;
  - (2) two vertical covers (completely finishes both sides with equal length trim covers)
  - (1) one vertical cover only (select when a two-way Intermediate 180° connection is above a three-way 90° connection a Transition Cover (UNTC) is ordered separately to cover the open side

Three-Way Intermediate 90° (UNIC3)

- Connection is used to fill the exposed ends of panel walls or add-on windows above a four-way connector in change of height configurations

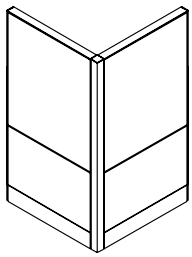

Four-Way Intermediate 90° (UNIC4)

- Connection is used to fill the gap created when four add-on windows are added above an existing four-way connection

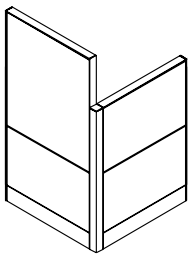

connector & trim configurations

A minimal number of connector types are required to make a large number of connections possible in District.

two-way

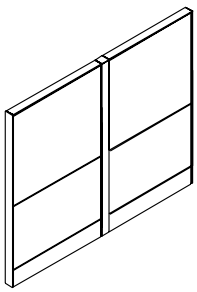

Two-Way 90° Connector (UNPCR2)

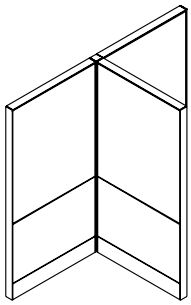

Two-Way 90° Connector (UNPCR2)

Intermediate End Trim (UNTM)

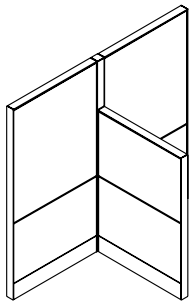

Two-Way 180° Spacer (UNPCCR)

three-way

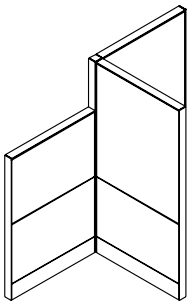

Three-Way 90° Connector (UNPCR3)

Three-Way 90° Connector (UNPCR3) (no vertical trim option)

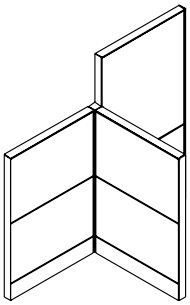

Two-Way Intermediate 180° Spacer (UNICC) (one vertical trim only option)

Transition Cover (UNTC)

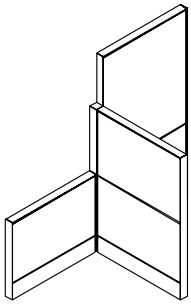

Three-Way 90° Connector (UNPCR3)

Two-Way 90° Intermediate (UNPC2)

Three-Way 90° Connector (UNPCR3)

Intermediate End Trim (UNTM)

Intermediate End Trim (UNTM)

Four-Way 90° Connector (UNPCR4)
Two-Way Intermediate 90° (UNIC2)
Intermediate End Trim (UNTM)

planning with connectors & trims

The following should be considered when planning with District trims and connectors.

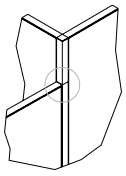

trims and connectors

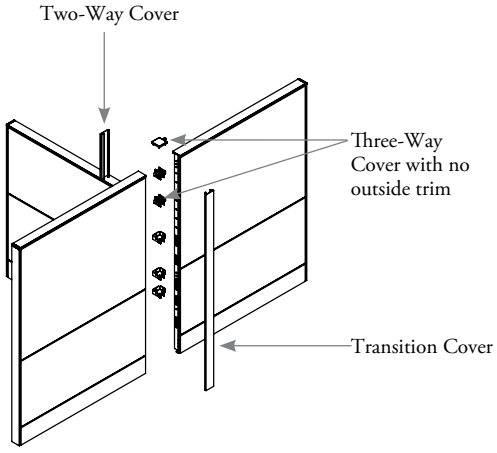

- The combination of panel types used must be indicated when specifying a corner connector because elevated connectors include the panel foot. In this example a UNPCR3EA is used which indicates two Flush panels or Convertible panels or one Elevated panel

- In change of height applications, the connector is specified at the height of the lowest panel
- Intermediate Connectors and Intermediate Trims are used above that height to conceal all exposed ends

- When an L-shaped corner connector meets a straight corner connector, (ex. Three-Way 90˚ (UNCPRC3) with a Two-Way Intermediate 90˚ (UNIC2) above), a seam will be visible

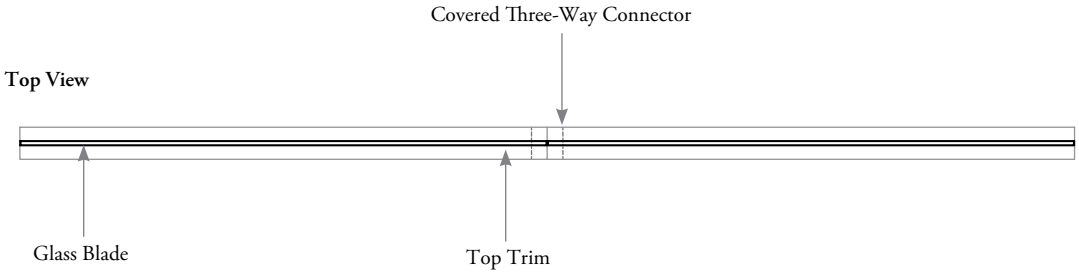

- When a Two-Way Intermediate 180˚ (UNICC) is mounted above a 90˚ Connector (ex. Three-Way 90˚ (UNPCR3) the connectors should be specified **without** the outside trims. A Transition Cover (UNTC) is specified to extend the full height of the connection, eliminating the seam

planning with connectors & trims (continued)

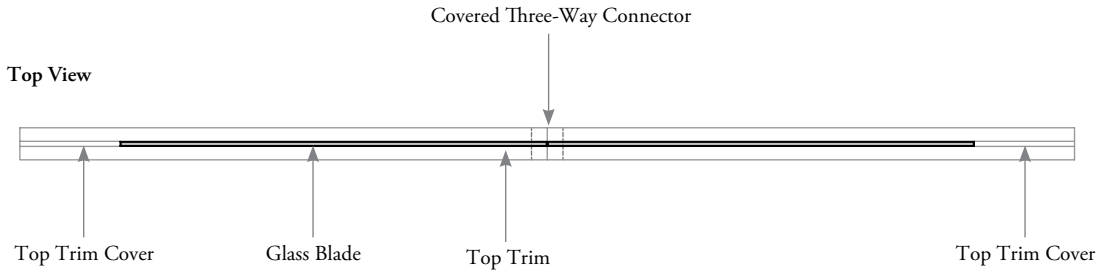

panel top trim for panels with inset glass

- Panel Top Trims for Inset Glass are required when the inset glass blade is used
- When the Extended option is specified over a three-way connector the existing top cap is removed and the Panel Top Trim for Panels with Inset Glass is run over top to conceal the three-way connector and allow for glass blades to meet

top trim cover

If an off-module application is specified, the Top Trim Cover must be specified to fill the exposed trim locations. The Top Trim Cover can be cut on site to ensure accuracy.

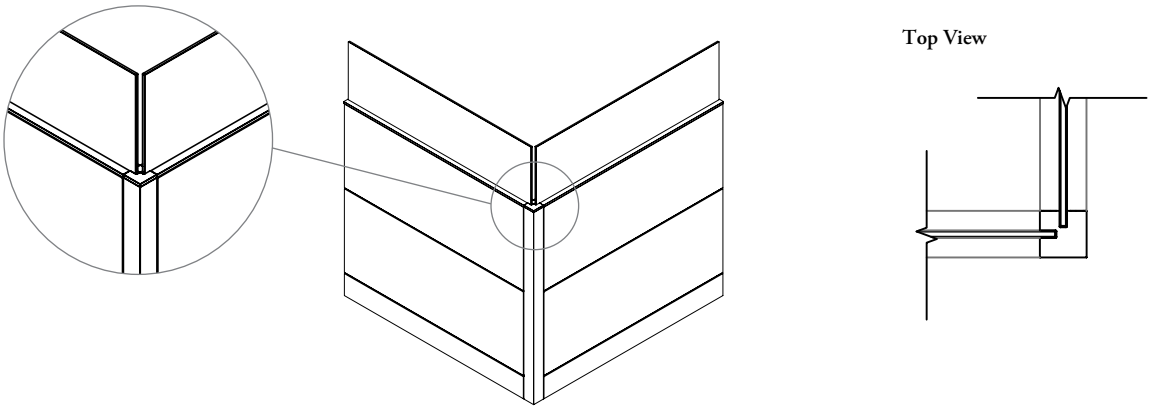

When Notched option is desired to accommodate an Intermediate End Trim the Panel Top Trim for Panels with Inset Glass must be specified as standard and only the Panel Glass Blade for Panels with Inset Glass will be specified Notched.

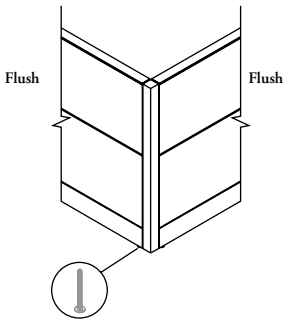

two-way 90° corner cap for panels with inset glass

When planning with Panel Glass Blade for Panels with Inset Glass (UYSPG) or Bridged Glass Blade for Panels with Inset Glass (UYSCG) on a corner application, a Two-Way 90° Corner Cap for Panels with Inset Glass must be specified to replace existing cap on two-way connector to allow inset glass to meet.

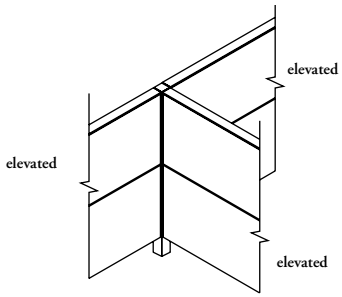

planning with connectors & trims (continued)

levelers

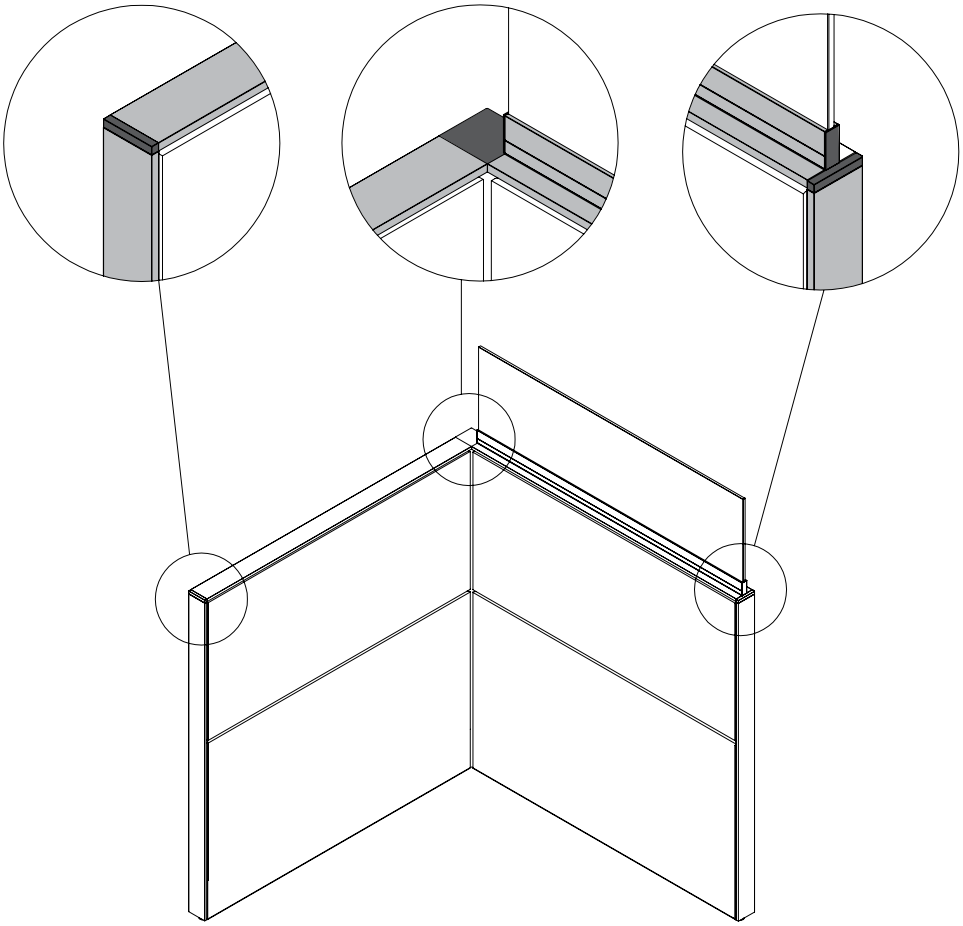

- When a flush corner connector is used the trim extends to the floor but the levelers may be visible

- When an elevated corner connector is used, the foot is visible but the levelers will be concealed
- The foot extends over the leveler

finish detail

- When the Anodized Aluminum finish is specified on connectors and trims, there will be a visual difference between the top and end trims and the corner caps (Extruded Aluminum vs Cast Aluminum). If a consistent finish is required, it is recommended that Mica Paint be specified

worksurfaces

worksurfaces

UNDERSTANDING WORKSURFACES. 172

WORKSURFACE BASICS. 173

PLANNING WITH WORKSURFACES 174

PLANNING WITH WORKSURFACE GAPS 175

PLANNING WITH SMALL FOOTPRINT WORKSURFACES. 177

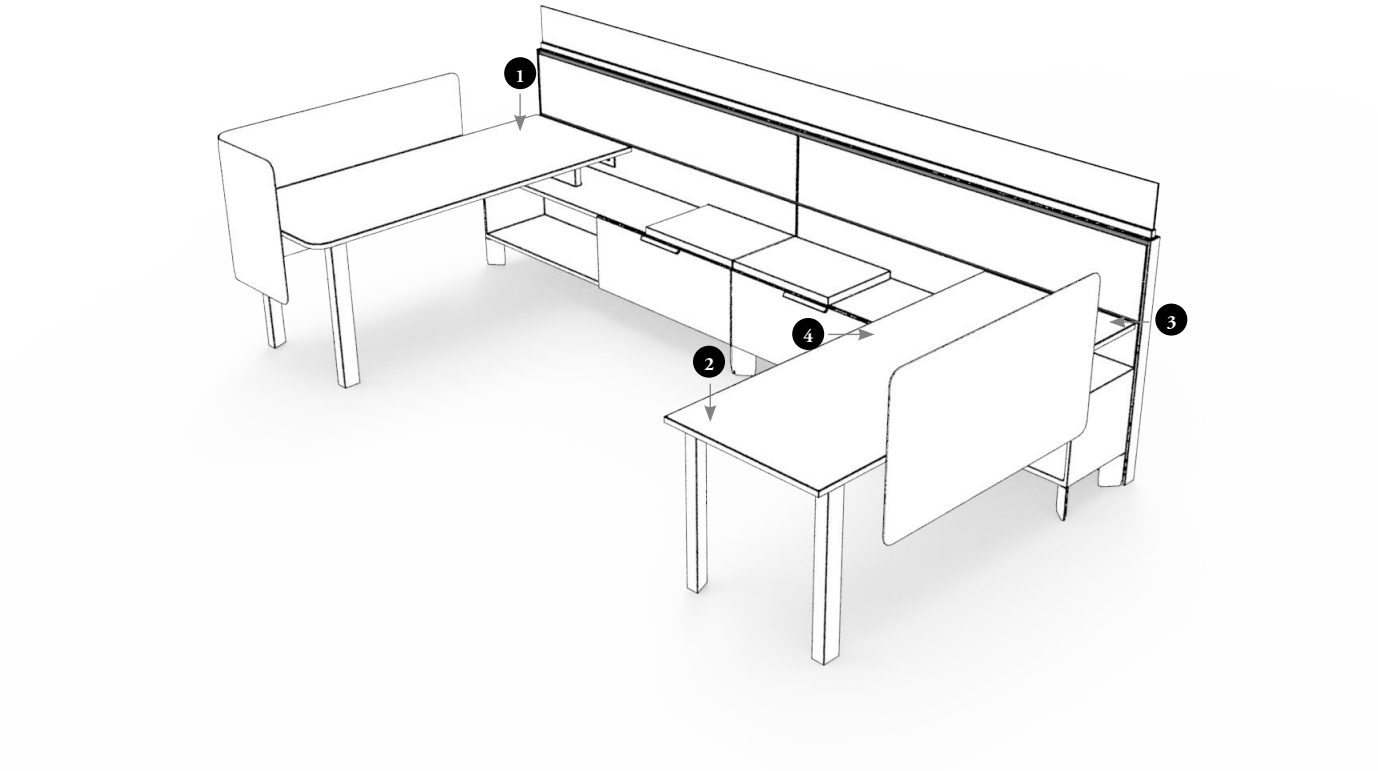

PLANNING WITH GROMMETS. 178

WORKSURFACE GRAIN/PATTERN DIRECTION 179

EDGE TRIM STYLE OVERVIEW 181

understanding worksurfaces

District provides a variety of worksurface shapes for primary and secondary worksurfaces. The following outlines the features of District worksurfaces.

1. District surfaces are standard with a 1" gap on the back side for cable access
2. Worksurface widths are available in 1" increments to allow for an optional 1" gap on one or both sides of a worksurface and to match up with storage components (see *Storage* section)
3. Worksurfaces can be panel wall- or storage-mounted or specified with legs to create freestanding or semi-supported surfaces (see *Supports* section)
   Worksurfaces can be mounted on- or off-module
4. The orientation of worksurfaces is determined by the location of the deepest end from the users perspective

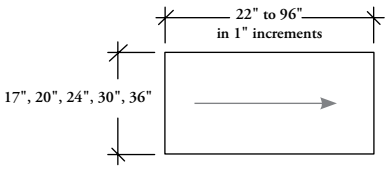

worksurface basics

The following worksurface shapes are available in District.

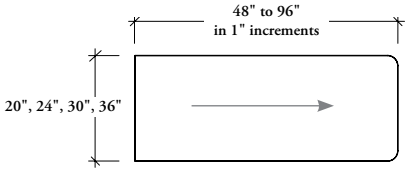

Worksurfaces **cannot** be mounted to 29" high Panel Walls with Inset Glass with the Panel Wall Bracket (UNBP). See *Planning with Worksurface Support – Horizontal* section for more details.

Nominal depth dimensions shown

= Grain Direction =

Rectangle Worksurface (UNWR)

Rectangle with Radius Corners Worksurface (UNWC)

Finishes

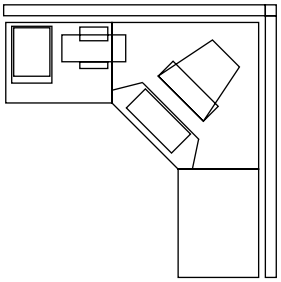

- Worksurfaces are available in Foundation Laminate, Flintwood and Natural Veneer finishes
- Edge trims are available in Acrylic, ABS, Flintwood and Natural Veneer
- Acrylic is available with Foundation Laminate
- ABS is available with Foundation Laminate
- Flintwood edge trims are finished to match the Flintwood surface
- Natural Veneer edge trims are finished to match the Natural Veneer surface

planning with worksurfaces

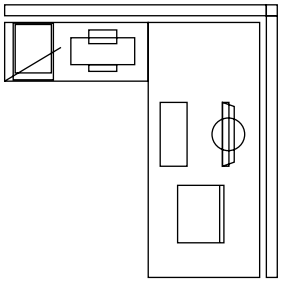

The following should be considered when planning with District worksurfaces.

conventional vs. district

• District allows for the re-interpretation of conventional corner oriented workstations to maximize work flow

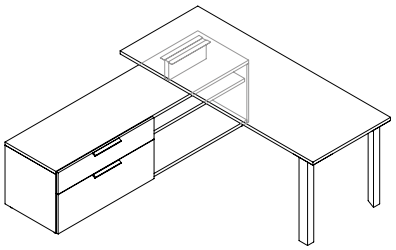

• **Conventional planning** typically uses a deep corner surface with keyboard tray and equal depth returns

• **District planning** provides a deep primary worksurface and shallow secondary surface for clear articulation of work-zones

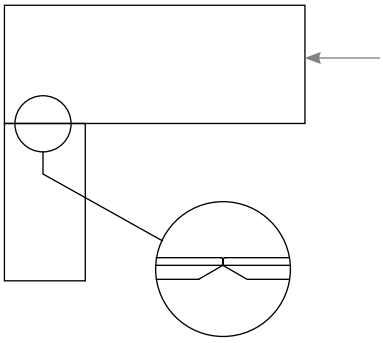

• Worksurface shapes are optimized for rectangular and tapered configurations

• **District planning** uses overlapping surfaces and volumes to allow more "stacking" and less filing surfaces

worksurface edge profiles

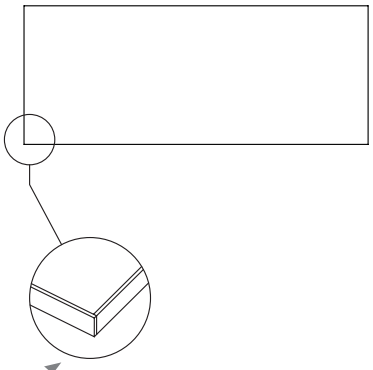

• District worksurfaces are available with flat and full knife edge profiles

• All sides of the worksurface have the same edge profile (both the user back and return edges of a full knife edge worksurface have the full knife edge profile). This reduces the instances of a worksurface becoming handed

• Worksurfaces are **not** offered with an eased edge so that gutters are **not** created when worksurfaces are butted up against each other

• The edge profile does **not** affect the placement of supports

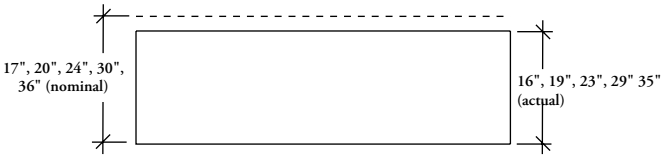

• Worksurface outside corners are **not** radiused. Edge trims meet at 90˚ at the outside corners of a worksurface

planning with worksurface gaps

The following should be considered when planning for gapping on worksurfaces.

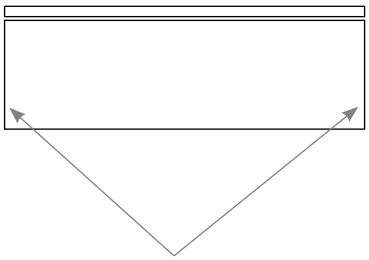

worksurface depths

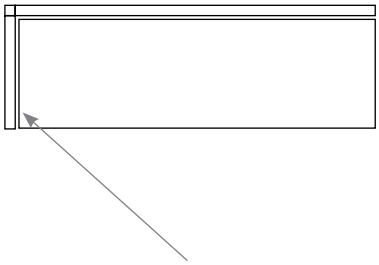

- All worksurfaces have **nominal** depths (the actual depth is 1" less than the nominal depth) to allow for a gap at the back
- The gap is **not** optional, it is the standard configuration
- The gap is for cable management, access to electrics and alignment with storage and panel walls (International electrics may require a grommet to be specified to accommodate larger sized plugs). Grommets available in center, left or right side

worksurface widths

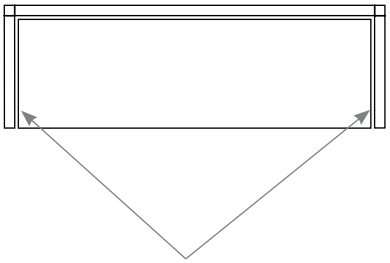

District worksurfaces are available in 1" increment widths to allow for a continuous gap around all sides of a workstation bounded by panel walls.

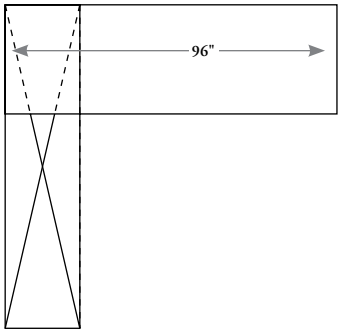

Worksurface is specified at same width as panel because no gap is required on either end

Worksurface is specified 1" less than width of panel to allow a gap on one side only

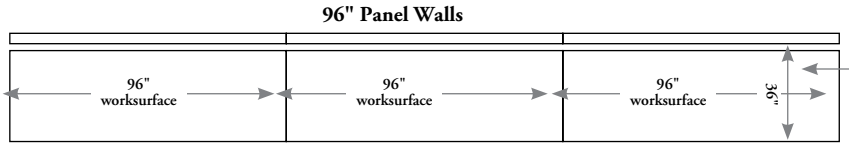

Worksurface is specified 2" less than the panel width to allow a gap on both sides

For freestanding applications, gapping is **not** an issue, so a full width worksurface should be specified.

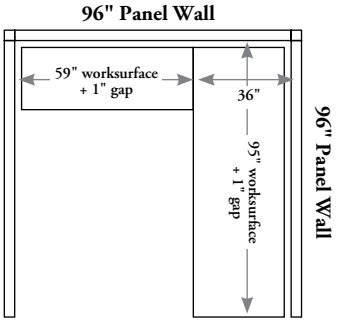

planning with worksurface gaps (continued)

The following examples demonstrate a variety of typical gapping applications.

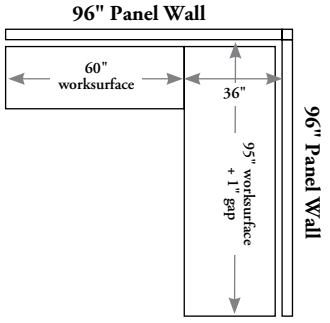

The depth is always nominal so the 36" depth is actually 35" with a 1" gap.

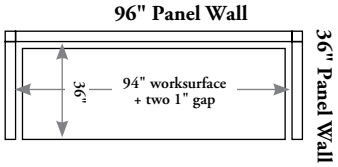

Full width worksurfaces are used because no return panel walls are used on the sides.

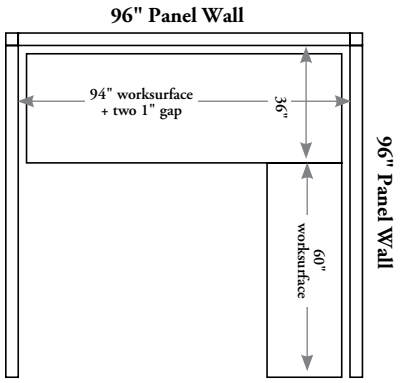

Both worksurfaces are 1" less than the width of the panel walls.

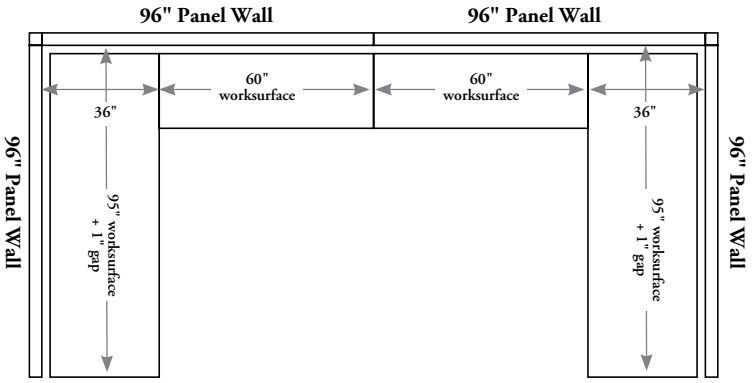

Only the primary surface is 1" less than the width of the panel wall, because there is no gap on the return surface.

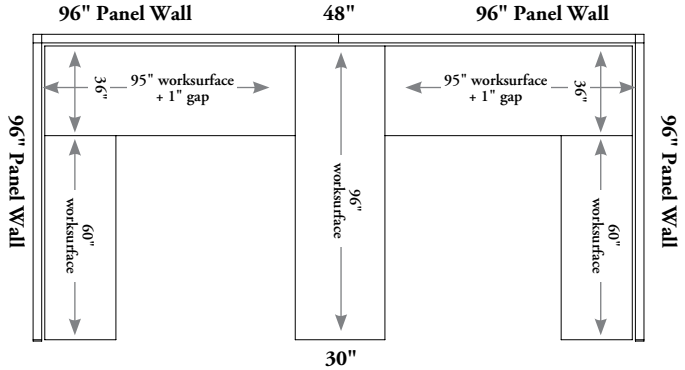

Worksurface is 2" less than the width of the panel wall to allow for a gap on either side.

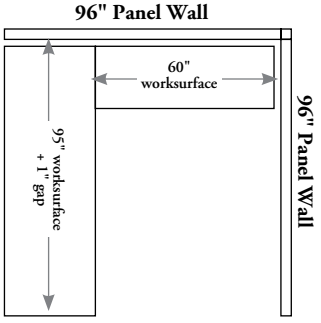

The primary worksurface is wrapped on both sides by panels so it is 2" less than the width of the panel, the return remains the full width.

The two returns meet each other in the center so no gaps are required.

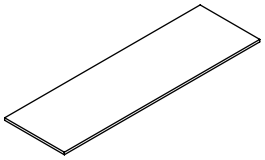

The center worksurface and return remains the full panel width and the outside primary surfaces have a 1" gap.

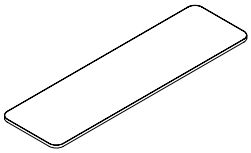

When a semi-suspended worksurface is used, it should be aligned with the panel end. The 1" gap then moves to the corner without having to reduce the return surface by 1".

planning with small footprint worksurfaces

District provides a limited collection of Small Footprint Worksurfaces that optimize efficiency within small scale workstation layouts.

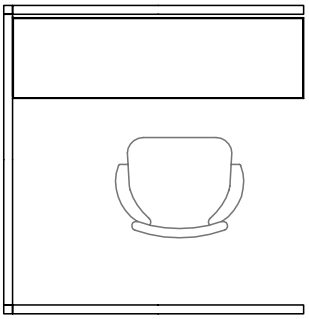

Rectangle Worksurface (UNWR)

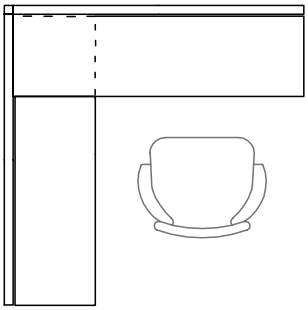

Rectangle with Radius Corners Worksurface (UNWC)

• Worksurfaces are available in depths of 17" to allow for maximum planning capability in temporary or permanent address workstations

rectangular worksurfaces

• 17" deep surfaces provide adequate chair space in 5'x 5' workstations

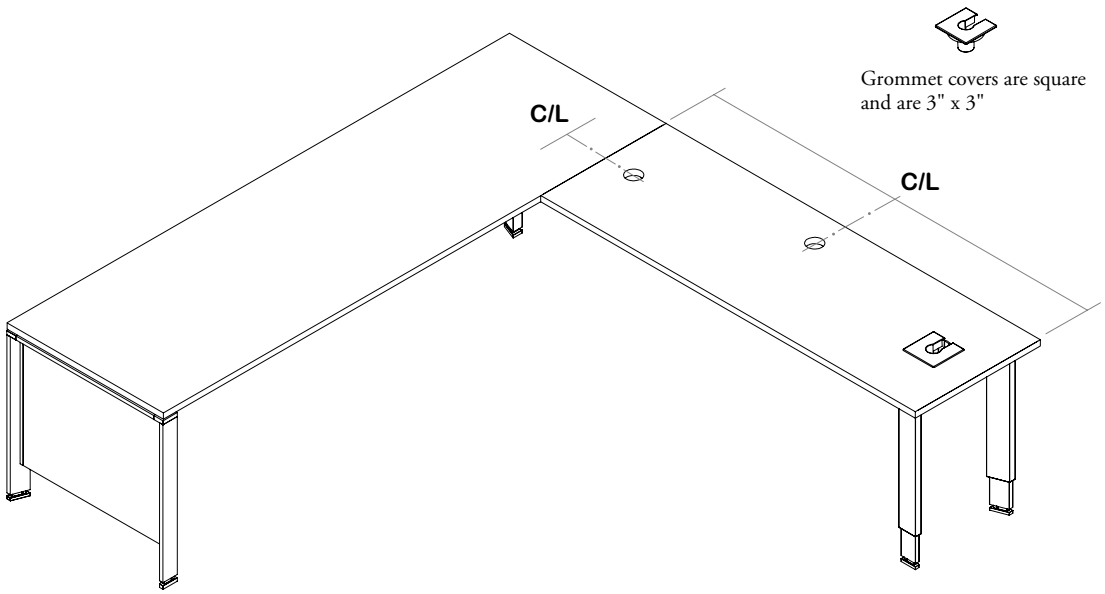

• When worksurfaces are requires above a 16" deep low storage, the cabinet depths will align

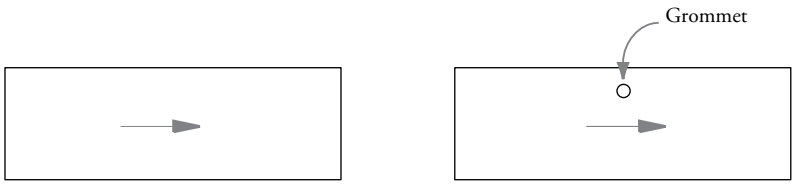

planning with grommets

The following needs to be considered when selecting grommets

worksurfaces combined with supports

Grommets can be located left, right or centered. The left and right grommets are centered on the depth to avoid interference with supports. See *Supports* for more details.

- Careful attention must be given to worksurfaces with a grain direction
- For surfaces with no grommet the grain direction should be going from left to right to match surface with grommets

→ = Grain Direction =

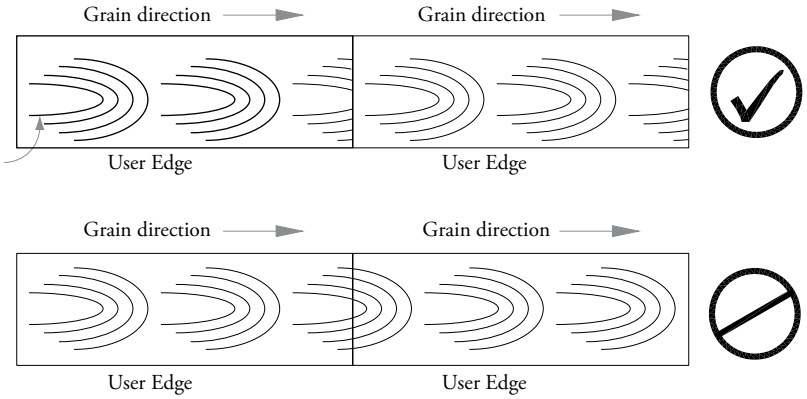

worksurface grain/pattern direction

Attention to grain/pattern direction is important when planning worksurfaces.

- There is no user edge so care must be taken during installation to match grain/pattern direction
- Grain/patterns are **not** "centered" on worksurface or support
- Applies to Foundation Laminate (wood grain patterns), Flintwood (Standard and Cathedral) and Natural Veneer

worksurfaces

- Grain direction will appear in the same direction, from side to side
- For Cathedral Flintwoods and Natural Veneers the grain will run from left to right from the user's prospective
- Grain patterns are **not** centered on worksurface
- Includes Laminate, Flintwood (Standard and Cathedral) and Natural Veneers

→ = Grain Direction =

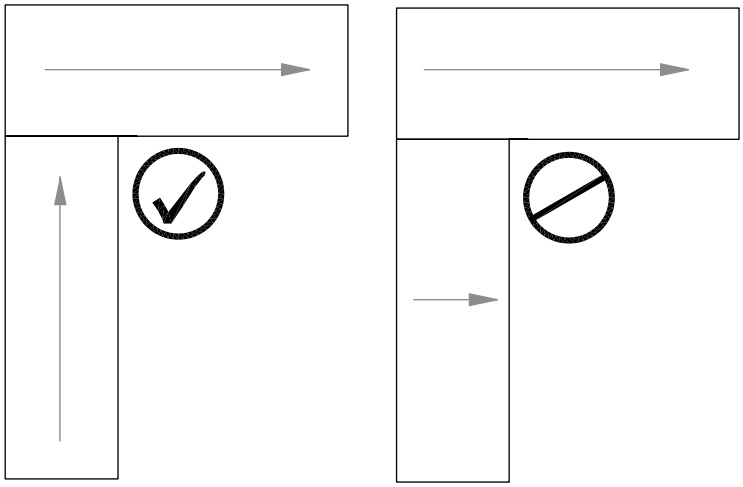

worksurface grain/pattern direction (continued)

Attention to grain/pattern direction is important when planning worksurfaces. The following examples demonstrate this.

- There is no user edge so care must be taken upon installation to match grain/pattern direction
- Grain/patterns are **not** "centered" on worksurface or support
- Includes Foundation Laminate, Flintwood (Standard and Cathedral) and Natural Veneer

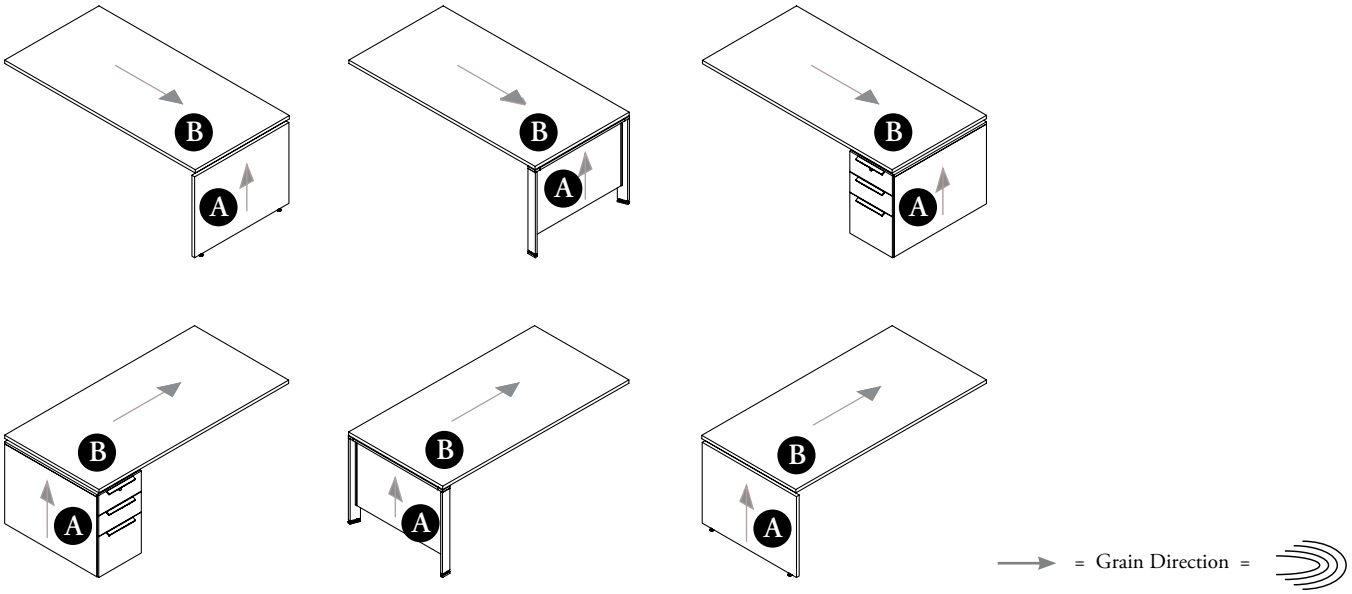

bridge worksurfaces

District does **not** offer a bridge worksurface so grain direction changes will always occur

worksurfaces combined with supports

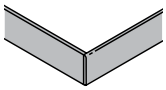

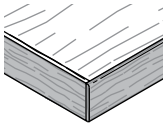

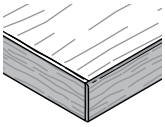

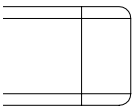

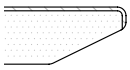

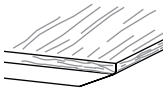

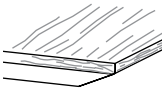

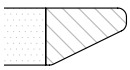

- Grain direction on Supports is always vertical
- For Cathedral Flintwoods and Natural Veneers the grain runs from bottom to top
- There is no matching grain across Supports (A) and Worksurfaces (B)

edge trim style overview

The chart below indicates which edge trim style can be specified with each District worksurface finish.

Both user edge and non-user edges have the same edge trim style.

	Foundation Laminate Surface	Flintwood Surface	Natural Veneer Surface
Flat (8) All Edges 		n/a	n/a
Flintwood Flat (9) All Edges 	n/a		
Flat (G) All Edges 	n/a	n/a	n/a
Full Knife (H) User Edge 	* 		* 
Full Knife (X) User Edge 	n/a	n/a	n/a

HEIGHT-ADJUSTABLE CREDENZA LOCK CHART 216

understanding height-adjustability

District provides a variety of height-adjustable desking options which include credenzas and height-adjustable worksurfaces.

There are two options in height-adjustable tables:

navigate

- Option of two types of base mechanisms:
  - Standard Range Electric
  - Extended-Electric-Restricted
- Leg styles:
  - Post Leg and T-Leg
  - T-Legs
  - T- Leg and Gable Leg
- Two worksurface styles:
  - Rectangular
  - Rectangular worksurface with Radius Corners
- Worksurface finishes:
  - Foundation Laminate
  - Flintwood
  - Natural Veneer
- Power and undersurface cable management options available

hiSpace

- Option of one type of base mechanism:
  - Extended Electric with Riser
- Leg styles:
  - T-Legs
- Two worksurface styles:
  - Rectangular
  - Rectangular worksurface with Radius Corners
- Worksurface finishes:
  - Foundation Laminate
- Power and undersurface cable management options available

Both Navigate and hiSpace Height-adjustable tables can be planned with credenza storage in a variety of perpendicular and parallel applications.

perpendicular height-adjustable worksurfaces

Height-adjustable tables run perpendicular to the panel spine with credenzas running parallel to the spine.

parallel height-adjustable worksurfaces

Height-adjustable tables run parallel to the panel spine with credenzas running perpendicular to the spine.

perpendicular storage

Credenza storage runs perpendicular to the panel spine with Height-Adjustable tables running parallel to the spine.

parallel storage

Credenza storage runs parallel to the panel spine with Height-Adjustable tables running perpendicular to the spine.

navigate height-adjustable built-in perpendicular table basics

District with Navigate Height Adjustable Tables offers options for planning in perpendicular applications.

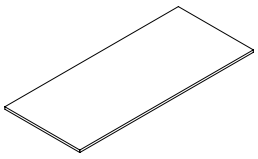

Perpendicular Height-Adjustable Built-in Worksurfaces)

- Used with same sized Navigate Height-Adjustable Built-in Bases
- Depth: 30"
- Grommet Cut Out Styles
  - Round (2-3/4" diameter)
- Cut Out Location:
  - None
  - Center
  - Left
  - Right

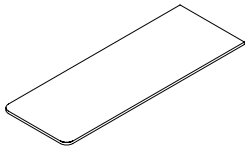

Navigate Height-Adjustable Built-in Base Perpendicular Planning

- Used with same sized Perpendicular Height-Adjustable Worksurfaces
- Depth: 30"
- Base Mechanism:
  - Standard Range Electric (27" - 43")
  - Extended Range Electric - Restricted (25" - 48.7")
- Switch Styles:
  - Standard Up/Down
  - Display with Up/Down Memory
  - Toggle Up/Down
  - Display Toggle with Memory and Navigate GPS
- Cut out Location:
  - None
  - Center
  - Left
  - Right

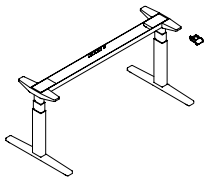

Perpendicular Rectangular Height-Adjustable Built-in Worksurface (WLD)

- A worksurface with rectangular edges be used with either:
  - Built-in Bases, Perpendicular Planning
  - Built-in Gable Base - Perpendicular Planning
- Widths: 53", 59", 65", 71", 77", 83"

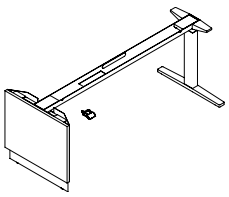

Perpendicular Rectangular Height-Adjustable Built-in Worksurface with Two Radius Corners (WMD)

- A worksurface with radius edges that can used with:
  - Built-in Bases, Perpendicular Planning
- Widths: 65", 71", 77", 83"

Navigate Height-Adjustable Built-in Base - Perpendicular Planning (YGD)

- A height-adjustable table base used with:
  - Rectangular Height-Adjustable Worksurface, Perpendicular Planning
  - Rectangular Height-Adjustable Worksurface with Two Radius Corners, Perpendicular Planning
- Width (to work with worksurface width):
  - 65", 71", 77", 83"
- Leg Styles:
  - T-Leg (30" deep)

Navigate Height-Adjustable Built-in Gable Base - Perpendicular Planning (YVD)

- A height-adjustable base with integrated gable leg used with:
  - Rectangular Height-Adjustable Worksurface, Perpendicular Planning
- Width (to work with worksurface width):
  - 53", 59", 65", 71", 77" 83"
- Leg Styles:
  - Gable Leg (30" deep)

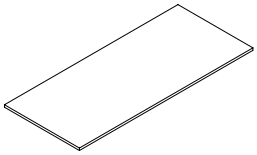

navigate height-adjustable built-in parallel table basics

District offers a variety of options for height-adjustable planning in parallel applications.

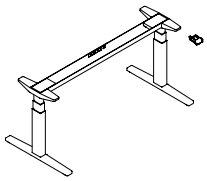

Navigate Height-Adjustable Built-in Base - Parallel Planning

- Used with same sized Perpendicular Height-Adjustable Worksurfaces
- Depth:
  - 29"
- Base Mechanism:
  - Standard Range Electric (27" - 43")
  - Extended Range Electric - Restricted (25" - 48.7")
- Switch Styles:
  - Standard Up/Down
  - Display with Up/Down Memory
  - Toggle Up/Down
  - Display Toggle with Memory and Navigate GPS

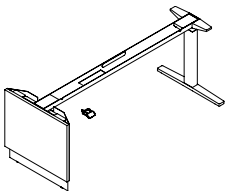

Parallel Rectangular Height-Adjustable Built-in Worksurface (WHD)

- A worksurface with rectangular edges used with:
  - Built-in Bases, Parallel Planning
  - Built-in Gable Base - Parallel Planning
- Depths:
  - 29"
- Widths:
  - 52", 58", 64", 70", 76", 82"
- Grommet Cut Out Styles:
  - Round (2-3/4" diameter)
- Cut out Location:
  - None
  - Center
  - Left
  - Right

Navigate Height-Adjustable Built-in Base - Parallel Planning (YHD)

- A height-adjustable table base used with:
  - Rectangular Height-Adjustable Worksurface, Parallel Planning
- Width (to work with worksurface width):
  - 52", 58", 64", 70", 76", 82"
- Leg Styles:
  - T-Leg (30" deep)

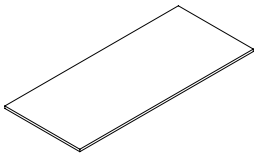

Navigate Height-Adjustable Built-in Gable Base - Parallel Planning (YWD)

- A height-adjustable base with integrated gable leg used with:
  - Rectangular Height-Adjustable Worksurface, Parallel Planning
- Width (to work with worksurface width):
  - 46", 52", 58", 64", 70", 76", 82"
- Leg Styles:
  - Gable Leg (30" deep)

navigate height-adjustable freestanding table basics

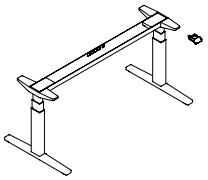

District offers a variety of options for height-adjustable planning in freestanding applications.

Freestanding Table Rectangular Height-Adjustable Worksurface (WBD)

- A worksurface with rectangular edges used with:
  - Built-in Base, Freestanding Planning
- Depths:
  - 23", 29", 35"
- Widths:
  - 45", 51", 57", 63", 69", 75", 81"
- Grommet Cut Out Styles:
  - Round (2-3/4" diameter)
- Cut out Location:
  - None
  - Center
  - Left
  - Right

Navigate Freestanding Table, Base Only (YAD)

- A height-adjustable table base used with:
  - Rectangular Height-Adjustable Worksurface, Parallel Planning
- Depths (to work with worksurface depth):
  - 23", 29", 35"
- Width (to work with worksurface width):
  - 45", 51", 57", 63", 69", 75", 81"
- Leg Styles:
  - T-Leg (30" deep)
- Base Mechanism:
  - Counterbalance - Standard (29.5" - 49.5")
  - Counterbalance - Lower Edition (26.5" - 43.5")
  - Standard - Electric (27" - 43")
  - Extended Electric - Restricted (25" - 48.7")
  - Extended Electric - Extended (22.6" - 48.7")
- Switch Styles:
  - Standard Up/Down
  - Display with Up/Down Memory
  - Toggle Up/Dow
  - Display Toggle with Memory and Navigate GPS

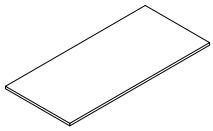

hiSpace height-adjustable built-in perpendicular table basics

District offers a variety of options for height-adjustable planning in perpendicular applications.

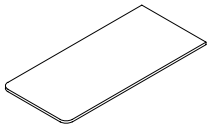

Perpendicular Height- Adjustable Built-in Worksurfaces:

- Depths: 30"
- Widths: 65", 71"
- Grommet Cut Out Styles:
  - Round (2-3/4" diameter)
- Cut out Location:
  - None
  - Center
  - Left
  - Right

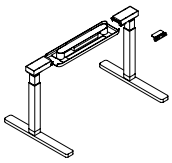

Perpendicular Rectangular Height-Adjustable Built-in Worksurface with Connection Kit for Quick Connect (WBG)

- A worksurface with rectangular edges used with:
  - Built-in Bases, Perpendicular Planning
  - Built-in Gable Base - Perpendicular Planning

Perpendicular Rectangular Height-Adjustable Built-in Worksurface with Connection Kit for Quick Connect with Radius Corners (WJE)

- A worksurface with radius edges used with:
  - Built-in Bases, Perpendicular Planning

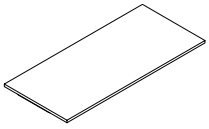

hiSpace Quick Connect Height-Adjustable Built-in Base Perpendicular Planning (YSG)

- A height-adjustable table base used with:
  - Rectangular Height-Adjustable Worksurface, Perpendicular Planning
  - Rectangular Height-Adjustable Worksurface with Two Radius Corners, Perpendicular Planning
- Depths (to work with worksurface depth):
  - 30"
- Width (to work with worksurface width):
  - 65", 71"
- Leg Styles: T-Leg (30" deep)
- Base Mechanism:
  - Extended Electric with Riser - (25"-51.1")
- Switch Styles:
  - Display with Up/Down Memory
  - Toggle Display with Memory
- Optional Undersurface Cable Management:
  - None
  - Cable Organizer with Felt Cover
  - Dual Plastic Trays & Powerbar
  - Dual Plastic Trays
- Vertical Wire Carrier:
  - None
  - Vertical Wire Carrier Finish

hiSpace height-adjustable built-in parallel table basics

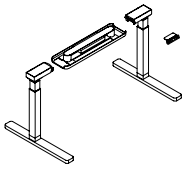

District offers a variety of options for height-adjustable planning in parallel applications.

Parallel Rectangular Height-Adjustable Built-in Worksurface (WBF)

- A worksurface with rectangular edges used with:
  - Built-in Bases, Parallel Planning
- Depths:
  - 29"
- Widths:
  - 52", 58", 64", 70"
- Grommet Cut Out Styles:
  - Round (2-3/4" diameter)
- Cut-out Location:
  - None

  - Right

hiSpace Height-Adjustable Built-in Base - Parallel Planning with connection kit for Quick Connect (YSP)

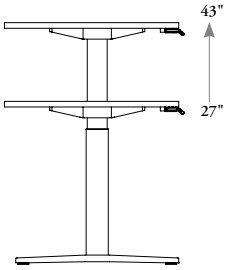

- A height-adjustable table base used with:
  - Rectangular Height-Adjustable Worksurface, Parallel Planning
- Depths (to work with worksurface depth):
  - 29"
- Width (to work with worksurface width):
  - 52", 58", 64", 70"
- Base Mechanism:
  - Extended Electric with Riser - (25" - 51.1")
- Switch Styles:
  - Display with Up/Down Memory
  - Toggle Display with Memory
- Undersurface Cable Management:
  - None
  - Cable Organizer with Felt Cover
  - Dual Plastic Trays & Powerbar
  - Dual Plastic Trays
- Vertical Wire Carrier:
  - None
  - Vertical Wire Carrier Finish

planning with height-adjustable tables

The following should be taken into consideration when planning with height-adjustable tables.

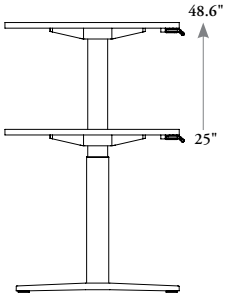

height-adjustment range

Navigate

Standard Electric

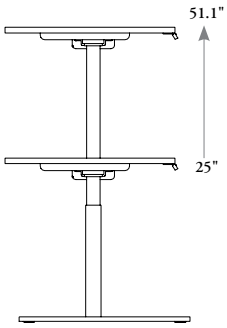

- Minimum Height: 27"
- Maximum Height: 43"

Extended Electric - Restricted

- Minimum Height: 25"
- Maximum Height: 48.6"
  - Minimum height is restricted so it does not interfere with a credenza.

hiSpace

Extended Electrics with Riser

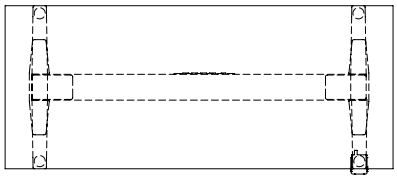

- Minimum Height: 25"
- Maximum Height: 51.1"

cut outs and grommets

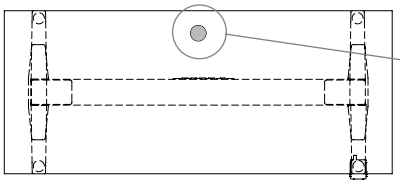

Cut outs with grommets are used to direct wires to the underside of the desk so they can be plugged into an under worksurface power bar or directed to a District panel.

Only the cut out is included in the worksurface, grommets must be ordered separately.

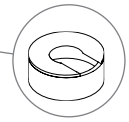

The following cut out locations can be specified:

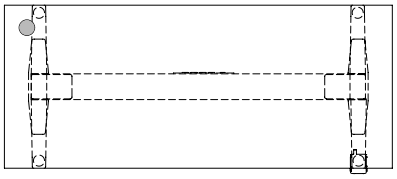

No Cut Out

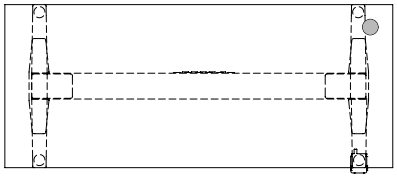

Round Cut Out, Center

UNDG (Die Cast Grommet)
(Ordered separately)

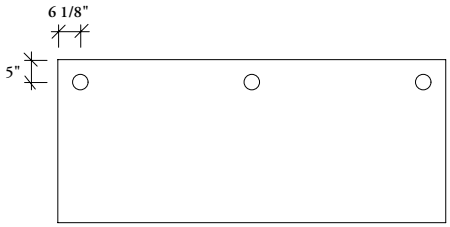

Round Cut Out, Left

Round Cut Out, Right

The following outlines the location of the grommet cut outs:

Center cut out is always centered on worksurface.

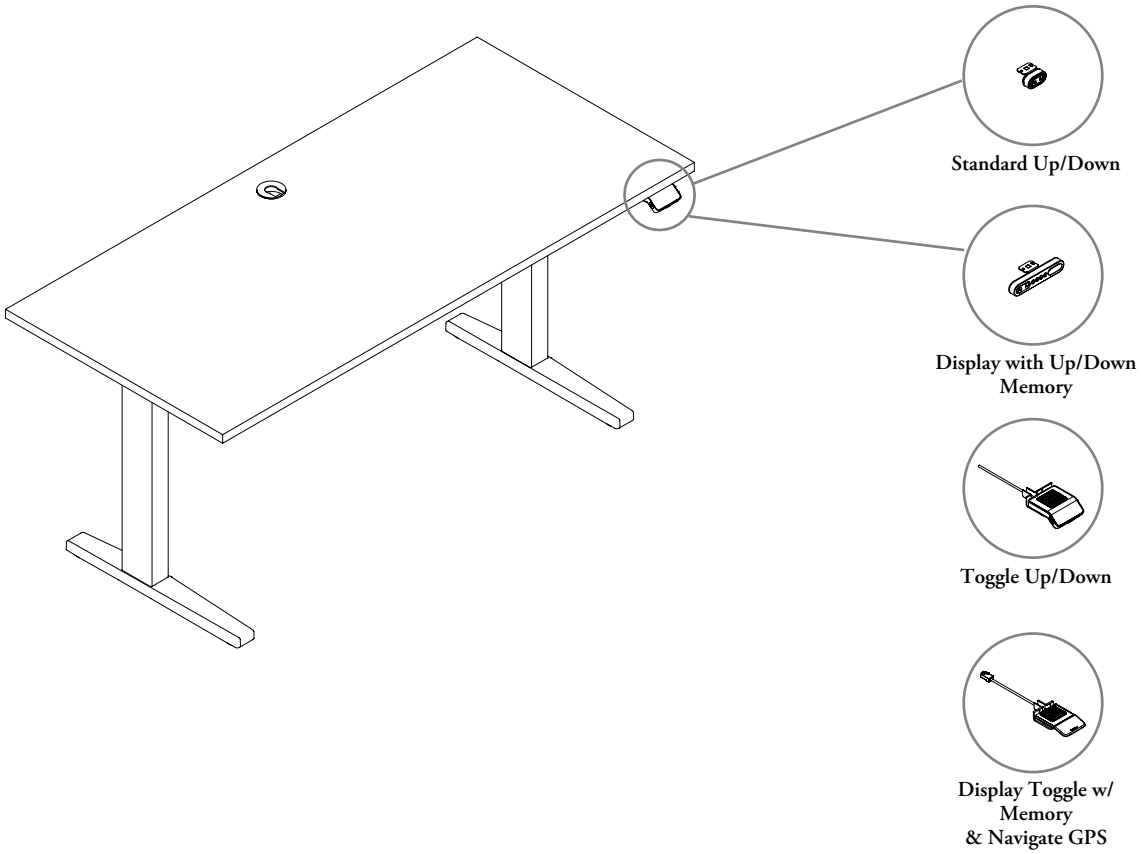

Left and right cut outs are 5" from edge for 30" deep worksurfaces and 3" for 29" deep worksurfaces.

planning with height-adjustable tables (continued)

switches

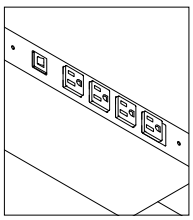

The following switches are available for upStage Navigate and hiSpace Height-Adjustable Built-In bases:

- Navigate
  - Standard Up/Down
  - Display with Up/Down Memory
  - Toggle Up/Down
  - Display Toggle with Memory & Navigate GPS
- hiSpace
  - Display with Up/Down Memory

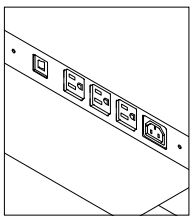

power bars and iec connection

There is an optional Cross Channel Integrated Power Bar which is mounted under the worksurface.

Cross Channel Integrated Powerbar - 4 Outlets (I)

Cross Channel Integrated Powerbar - 3 Outlets + 1 IEC (C)

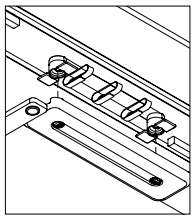

- Available on worksurfaces with 53" - 83" widths

If no Cross Channel Integrated Power Bar is specified, a cover plate will be provided.

For more information about planning with IEC connection and height-adjustability, refer to Complements: *Teknion's Ergonomics & Accessories Program*.

power pack on hiSpace

There is an optional power pack integrated with Cable Organizer with felt cover.

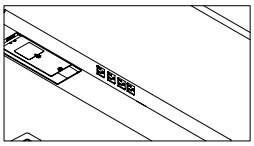

- Available on worksurfaces 53" - 71"

planning with height-adjustable tables (continued)

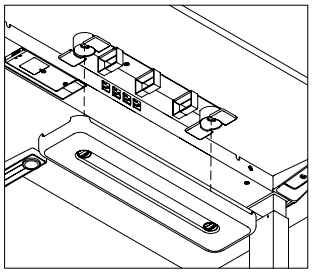

undersurface cable management

The following under surface are available for upStage Navigate and hiSpace Height-Adjustable Built-In bases:

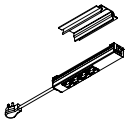

- Navigate
  - None
  - Cable organization with felt cover (Only available on worksurface depths 30')
  - Cable organization with no cover
  - Dual Plastic Trays & Power Bar
  - Dual Plastic Trays
- hiSpace
  - None
  - Dual Plastic Trays & Power Bar
  - Dual Plastic Trays

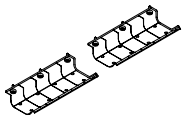

None

Cable organization with felt cover (Only available on worksurface depths 31')

Dual plastic trays, power bar and under surface mount

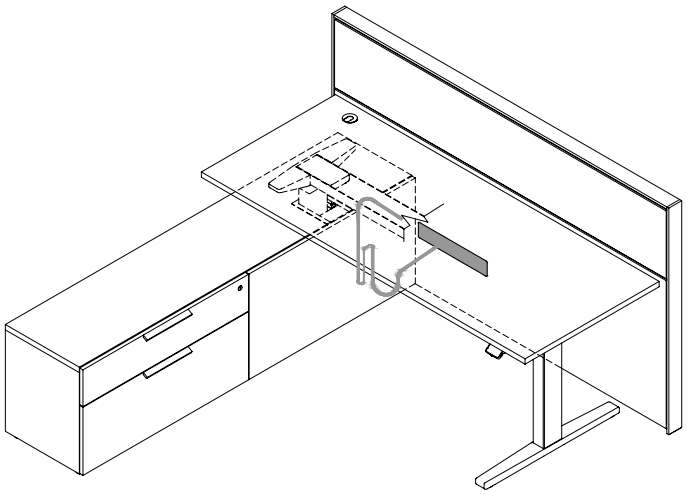

Dual plastic trays

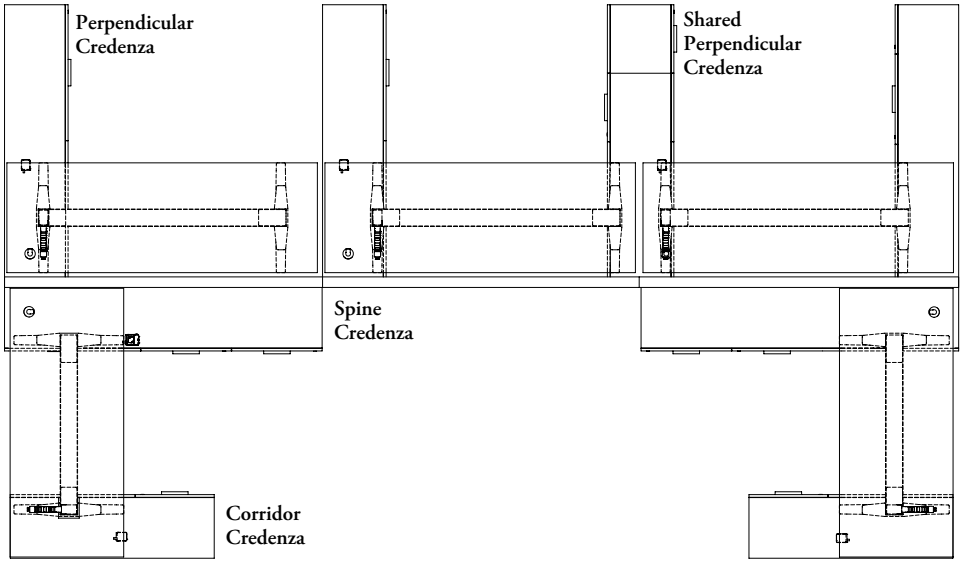

planning with height-adjustable tables (continued)

vertical wire carrier

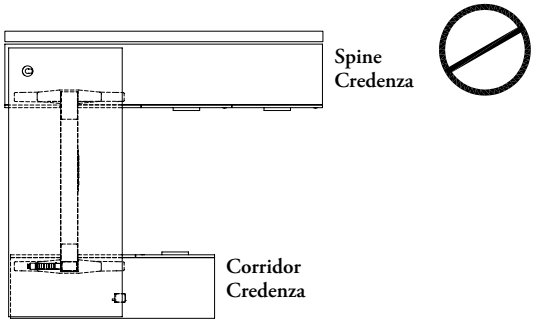

Vertical Wire Carriers can be specified on Height-Adjustable Built-in Bases and come with a mounting bracket.

If an Vertical Wire Carrier is specified, it is recommended that it be planned within a credenza.

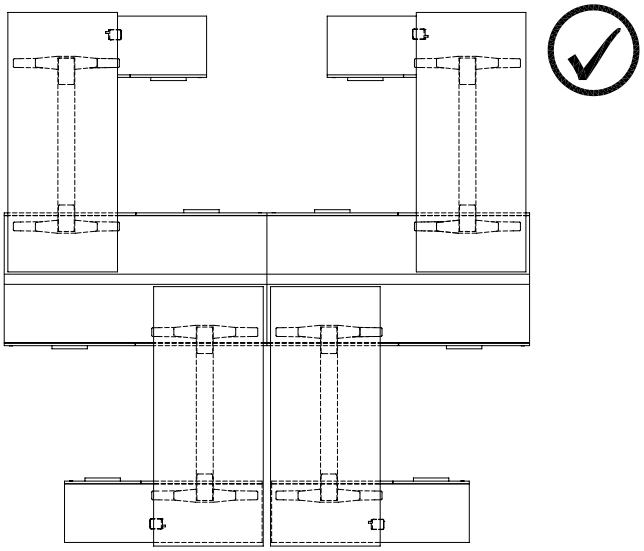

Vertical Wire Carriers cannot be planned within a Parallel Corridor Credenza (UPCC).

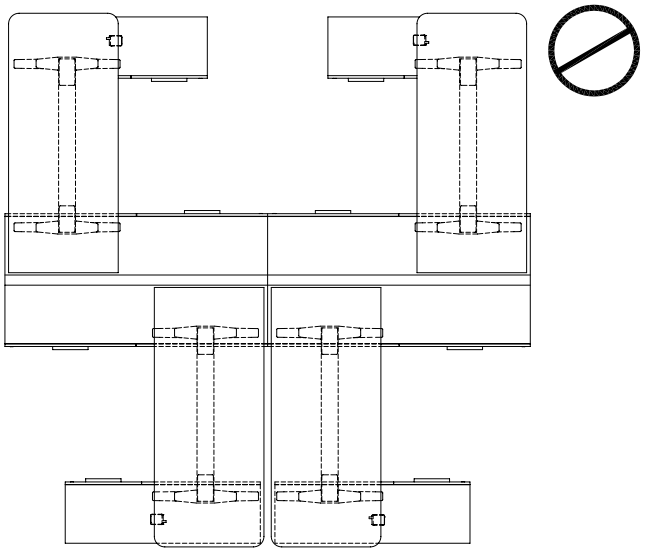

planning with height-adjustable tables (continued)

perpendicular planning with worksurfaces

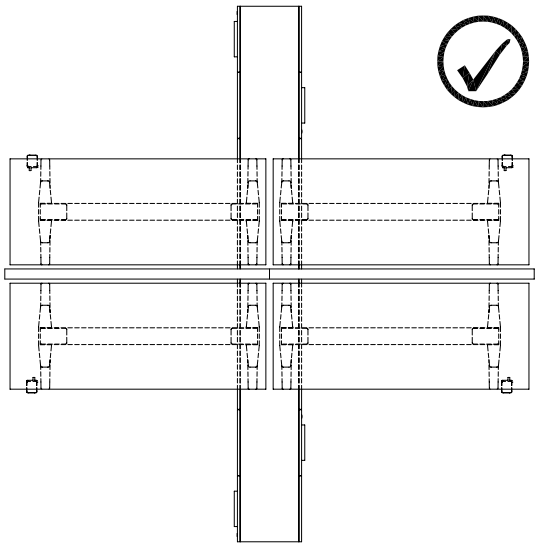

Planning with Perpendicular Rectangular Height-Adjustable Built-in Worksurfaces to the panel spine

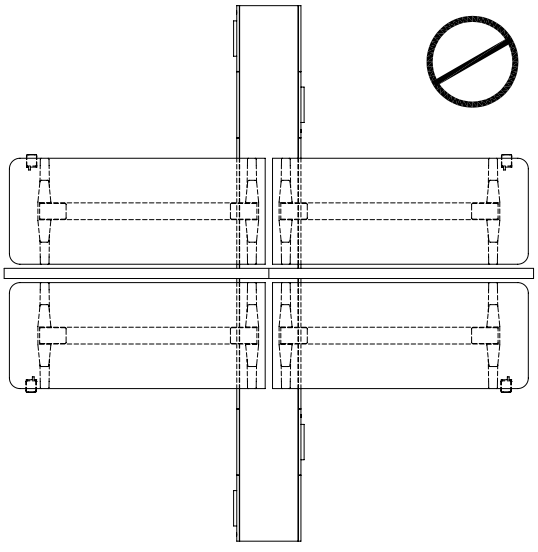

Planning with Perpendicular Rectangular Height-Adjustable Built-in Worksurfaces with Two Radius Corners to the panel spine

parallel planning with worksurfaces

When planning with worksurfaces parallel to the spine, only Parallel Rectangular Height-Adjustable Built-in Worksurface can be specified.

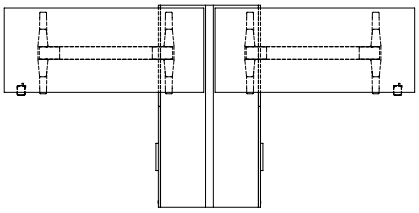

It is not recommended to use Perpendicular Rectangular Height-Adjustable Built-in Worksurface with Two Radius Corners parallel to the panel spine.

planning with height-adjustable tables (continued)

navigate perpendicular worksurfaces and height-adjustable table bases

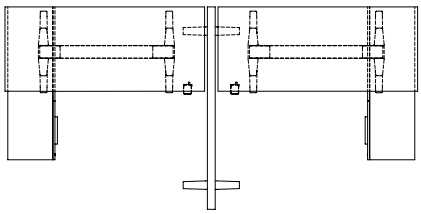

District Navigate height-adjustable table bases have options for the leg location in order to accommodate the applications they are being used in.

In order to specify the correct worksurface to match the height-adjustable base, it is required to know the leg application of the workstation beforehand.

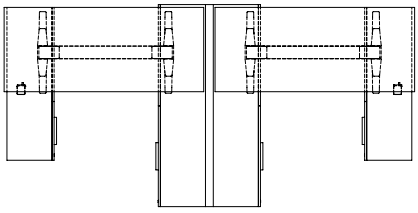

TSL

gapping

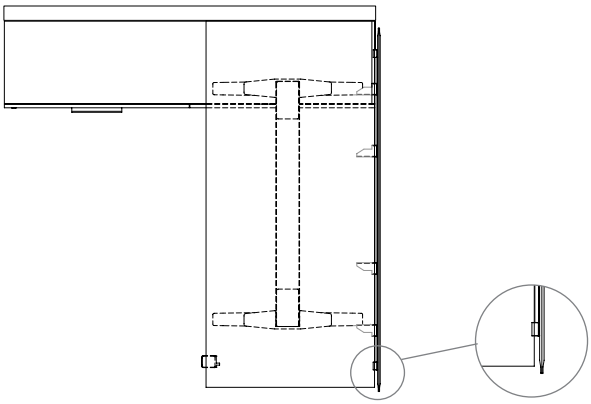

When planning with height-adjustable tables there will be a 1" gap between the worksurfaces and panels to avoid any pinch points.

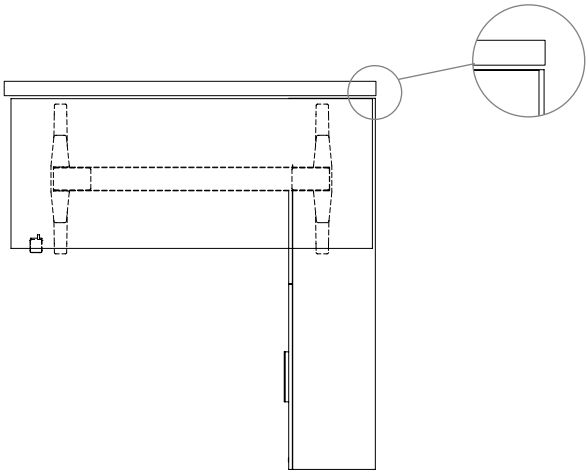

Perpendicular to spine Navigate or hiSpace Height-Adjustable Table wrapped with screens.

Perpendicular to spine Navigate or hiSpace Height-Adjustable Table wrapped with a Freestanding District Panel.

Perpendicular to spine Navigate or hiSpace Height-Adjustable Table with Screen.

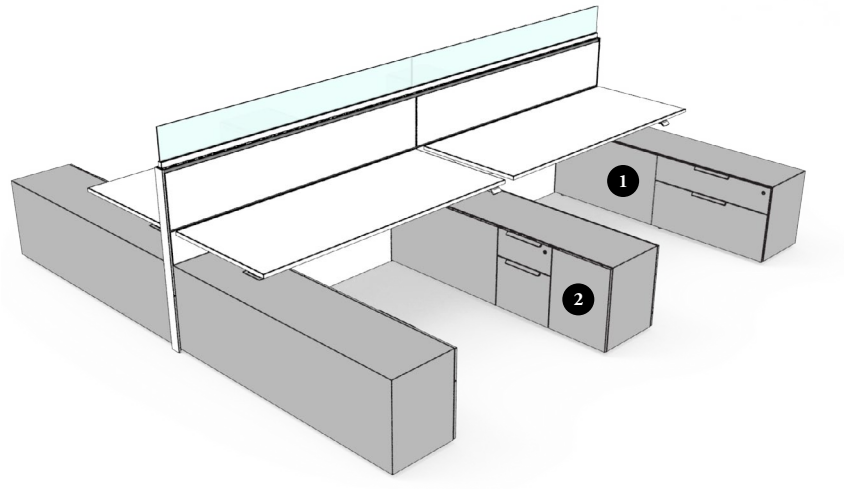

Parallel to spine Navigate or hiSpace Height-Adjustable Table.

credenzas for height-adjustable tables overview

When choosing a credenza for height-adjustable tables in District, there are two styles, perpendicular and parallel which are defined by the relationship of the credenza to the panel spine.

perpendicular credenzas

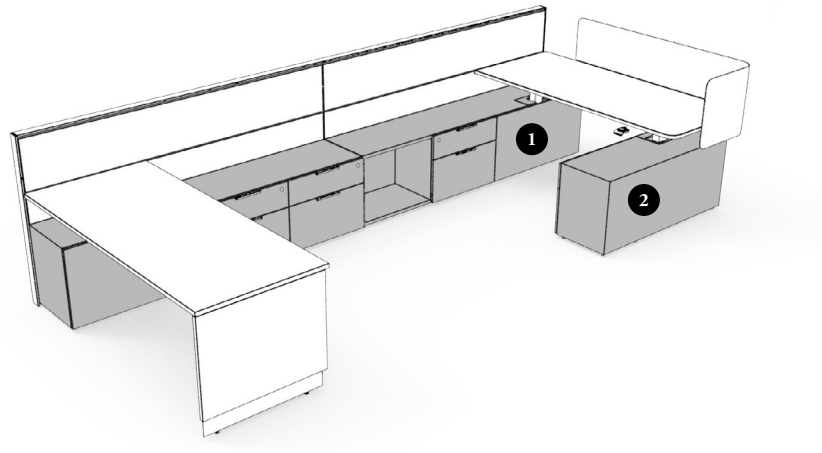

Credenzas run perpendicular to the panel spine with height-adjustable tables running parallel to the spine.

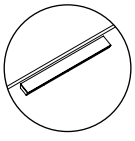

1. Perpendicular Credenza for Height-Adjustable Table - Full Drawer (UPPC)
2. Shared Perpendicular Credenza for Height-Adjustable Table (UPCS)

parallel credenzas

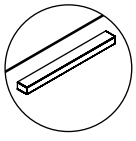

Credenzas run parallel to the panel spine with height-adjustable tables running perpendicular off of the spine.

1. Parallel Spine Credenza for Height-Adjustable Table - Open with Drawer (UPSC)
2. Parallel Corridor Credenza for Height-Adjustable Table (UPCC)

District Handle Pull

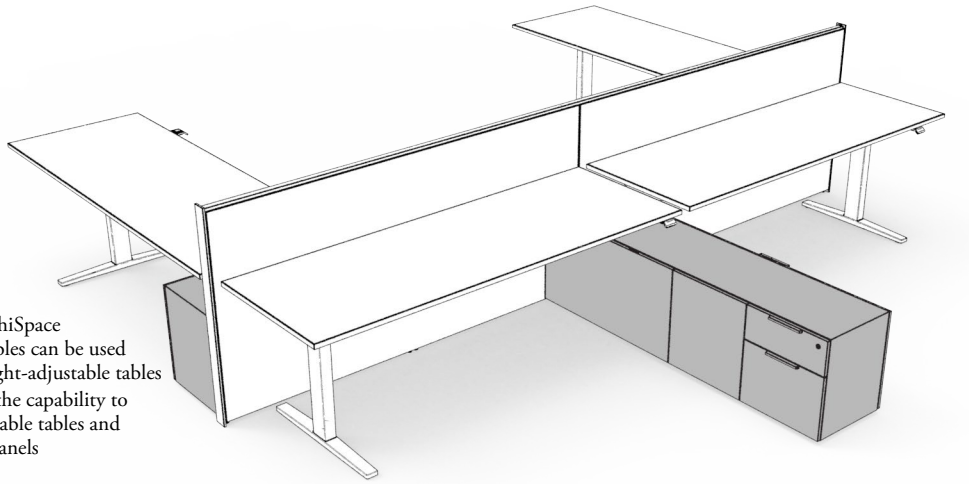

Rectangular Handle Pull

Two handle styles are available on District credenzas for height-adjustability.

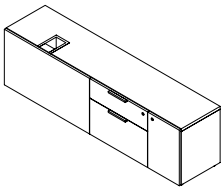

credenzas for height-adjustable table basics

District offers a variety of credenza options for height-adjustable planning in parallel and perpendicular applications.

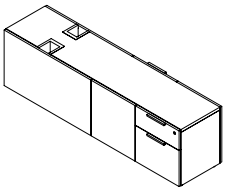

- District Navigate and hiSpace Height-Adjustable Tables can be used with credenzas for height-adjustable tables
- Provides storage with the capability to integrate height-adjustable tables and support stackers and panels
- Height:
  - 21"
- Depth:
  - 16"
- Leveling Range is -0.625" to +0.375"
- Lock option is standard locks
- Storage extended leveling kit (UNSXLC) can be ordered *from the District Storage Price & Application Guide* to reach +0.750"

Finishes:
- Laminate
- Flintwood
- Wood Veneer

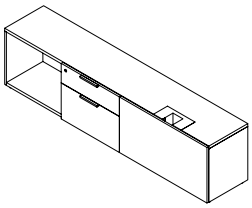

Perpendicular Credenza for Height-Adjustable Table (UPPC)

- Configurations:
  - Full Drawer
  - File with Hinged Door
- Can be used with:
  - Navigate Height-Adjustable Built-in Base - Parallel Planning
  - Navigate Height-Adjustable Built-in Gable Base -Parallel Planning
  - hiSpace Height-Adjustable Built-in Base Quick Connect - Parallel Planning
- Widths:
  - 48", 54", 60", 66", 72"

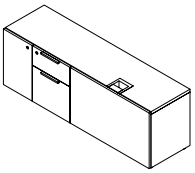

Shared Perpendicular Credenza for Height-Adjustable Table (UPCS)

- Can be used with:
  - Navigate Height-Adjustable Built-in Base - Parallel Planning
  - Navigate Height-Adjustable Built-in Gable Base -Parallel Planning
  - hiSpace Height-Adjustable Built-in Base Quick Connect - Parallel Planning
- Widths:
  - 66", 72"

Parallel Spine Credenza for Height-Adjustable Table (UPSC)

- Configurations:
  - Full Drawer
  - Open with Drawer
- Can be used with:
  - Navigate Height-Adjustable Built-in Base - Perpendicular Planning
  - Navigate Height-Adjustable Built-in Gable Base - Perpendicular Planning
  - hiSpace Height-Adjustable Built-in Base Quick Connect - Perpendicular Planning
- Widths:
  - 72", 78", 84"

Parallel Corridor Credenza for Height-Adjustable Table (UPCC)

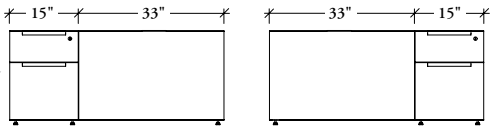

- Configurations:
  - Full Drawer
  - File with Hinged Door
- Can be used with:
  - Navigate Height-Adjustable Built-in Base - Perpendicular Planning
  - Navigate Height-Adjustable Built-in Gable Base - Perpendicular Planning
  - hiSpace Height-Adjustable Built-in Base Quick Connect - Perpendicular Planning
- Widths:
  - 48", 54", 60"

60" Width - File with Hinged Door (H)

UPCCH - Left UPCCH - Right

54" Width - Full Drawer (F)

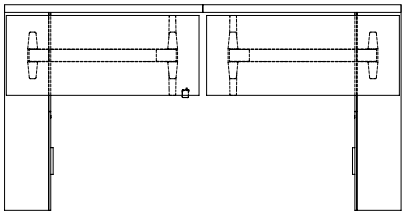

UPCCF - Left UPCCF - Right

planning with credenzas for height-adjustable tables

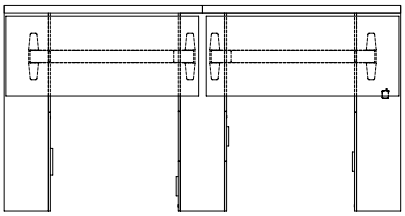

When planning with credenzas for height-adjustable tables, the following should be taken into consideration.

planning with credenzas perpendicular to the panel spine

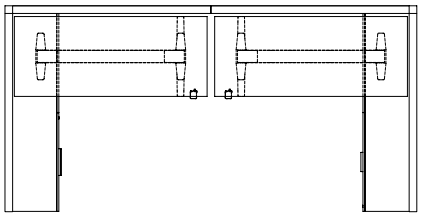

Credenzas and height-adjustable tables can be planned in the following configurations.

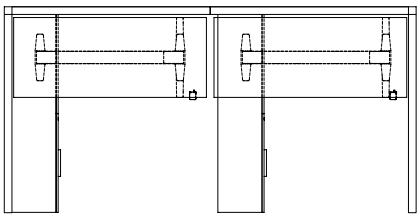

Navigate or hiSpace height-adjustable tables with credenzas and freestanding panels along spine.

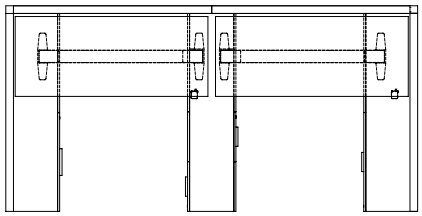

Navigate or hiSpace height-adjustable tables with credenzas attached to fixed panels along the spine.

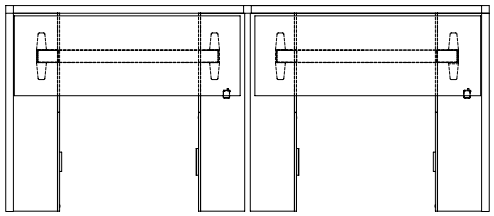

Navigate or hiSpace height-adjustable tables with credenzas attached to freestanding panels and fixed return panels.

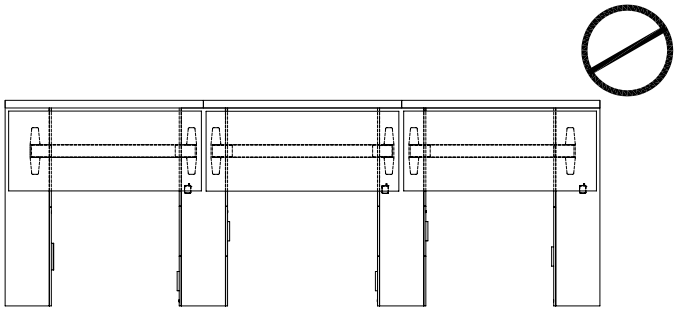

Navigate or hiSpace height-adjustable tables with credenzas attached to fixed panels and freestanding panels along the corridor.

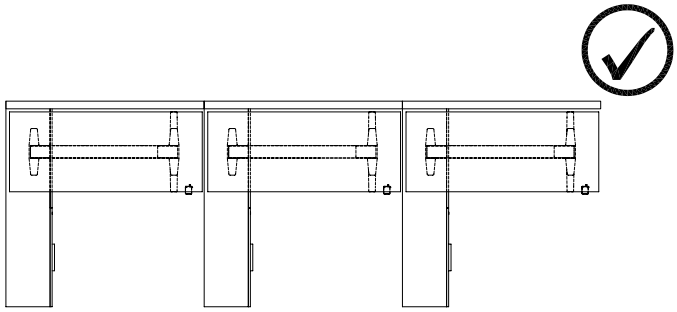

Navigate or hiSpace height-adjustable tables with credenzas attached to fixed panels.

Navigate or hiSpace height-adjustable tables with credenzas attached to fixed panels.

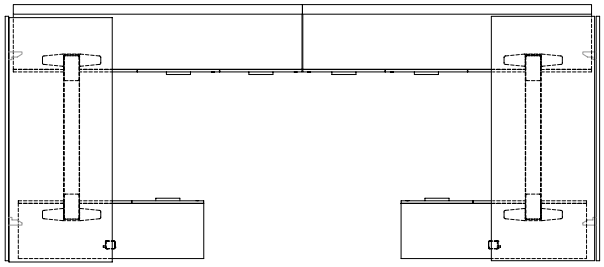

Navigate or hiSpace height-adjustable tables cannot be planned in three-packs of shared credenzas.

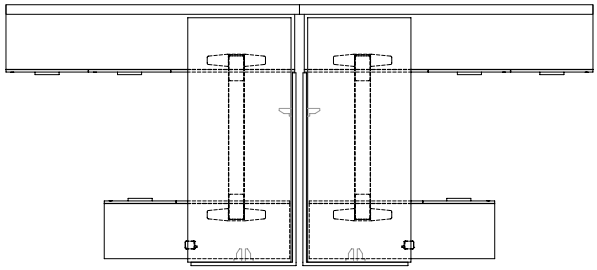

This is an alternative planning solution for a run of three height-adjustable workstations and perpendicular credenzas

planning with credenzas for height-adjustable tables (continued)

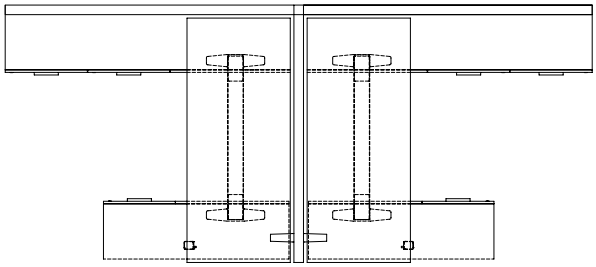

planning with credenzas parallel to panel spine

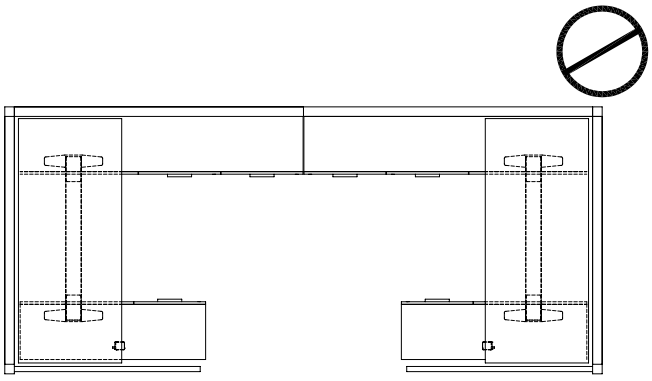

Navigate or hiSpace height-adjustable tables wrapped with screens will allow for the required gaps.

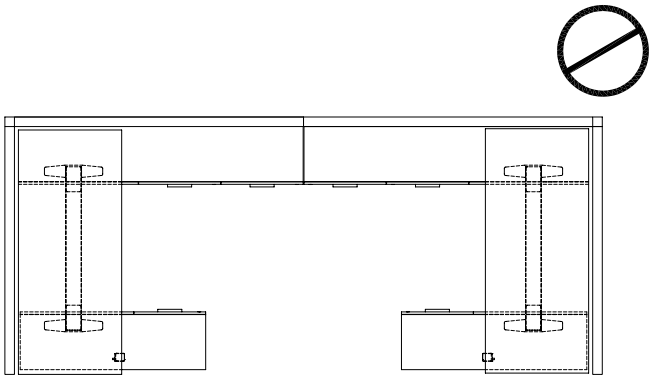

Back-to-back Navigate or hiSpace height-adjustable tables wrapped with screens will allow for the required gaps.

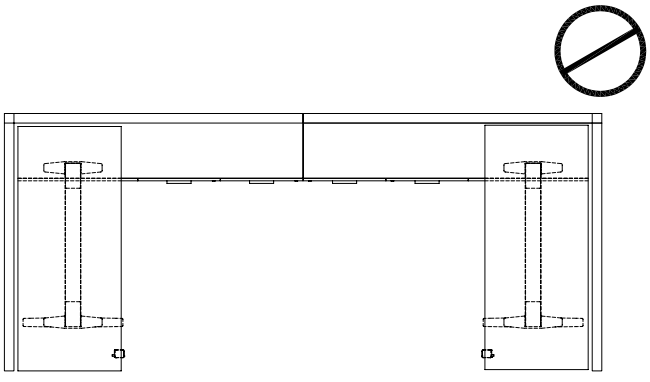

Back-to-back Navigate or hiSpace height-adjustable tables with a freestanding panel will allow for the required gaps.

Panels wrapped around Navigate or hiSpace height-adjustable tables will not allow for the required 1" gaps.

Return panels off of the spine cannot attach to a Parallel Corridor Credenza for Height-Adjustable Table (UPCC) or Navigate or hiSpace height-adjustable table.

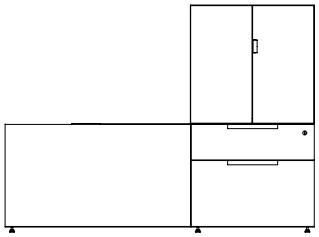

Freestanding panels are unable to attach to Navigate or hiSpace height-adjustable tables.

planning with credenzas for height-adjustable tables (continued)

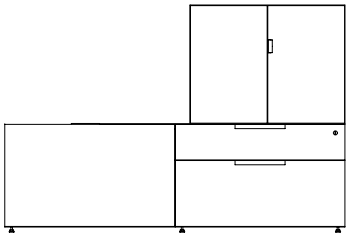

stackers

The width of the storage section on a height-adjustable credenza will vary depending on the overall width of the credenza. District stackers are available in widths to match the width of the storage section of each credenza.

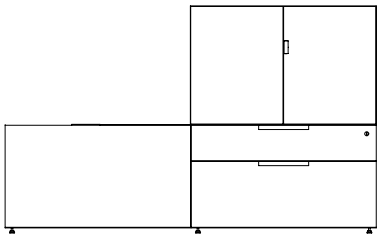

The following is recommended if stacker widths are to match with Perpendicular Credenzas for Height-Adjustable Tables (UPPC).

60" wide credenza with 24" wide stacker
(Full drawer right shown)

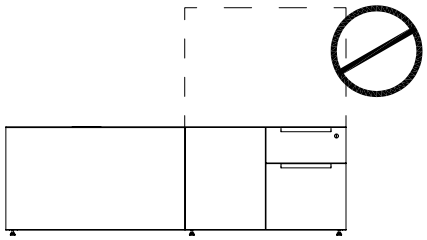

66" wide credenza with 30" wide stacker
(Full drawer right shown)

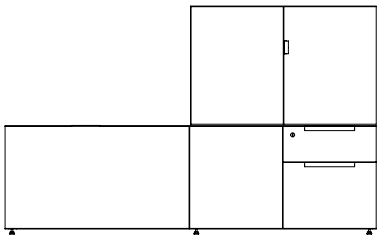

72" wide credenza with 36" wide stacker
(Full drawer right shown)

The following is recommended if stacker widths are to match with Shared Perpendicular Credenzas for Height-Adjustable Tables (UPCS).

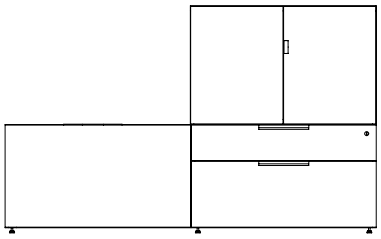

66" wide credenza with 36" wide stacker
(Full drawer right shown)

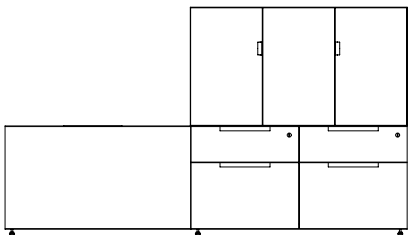

72" wide credenza with 36" wide stacker
(File with hinged door right shown)

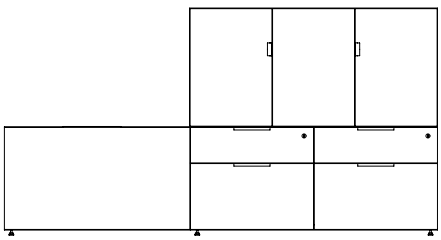

The following is recommended if stacker widths are to match Parallel Spine Credenzas for Height-Adjustable Tables (UPSC).

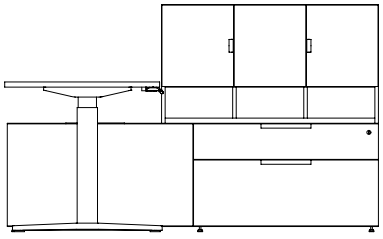

72" wide credenza with 36" wide stacker
(Full drawer right shown)

78" wide credenza with 42" wide stacker
(Full drawer right shown)

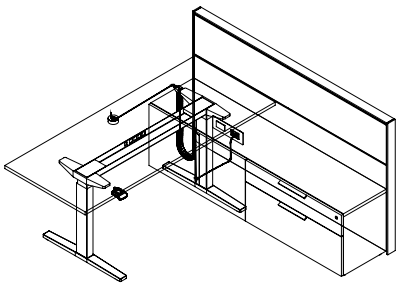

84" wide credenza and 48" wide stacker
(Full drawer right shown)

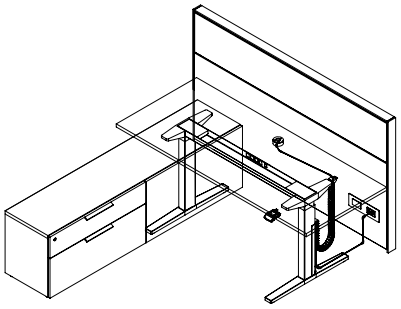

Always ensure there is a minimum 1" gap between Height-Adjustable table and stackers to avoid any pinch points.

planning with credenzas for height-adjustable tables (continued)

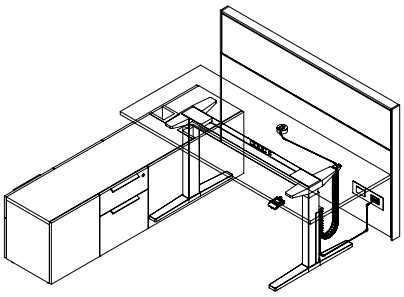

electrics and credenzas for height-adjustable tables

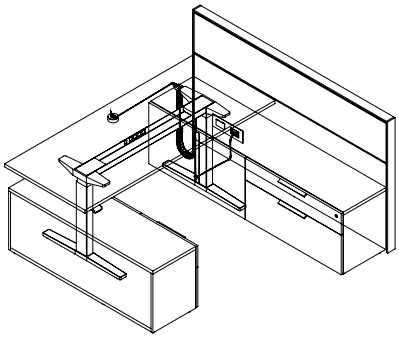

- Parallel Spine Credenzas for Height-Adjustable Tables (UPSC) are the only credenzas that can be specified with a cut out in the back
- The grommet into the Vertical Wire Carrier and then to the credenza to power box in panel

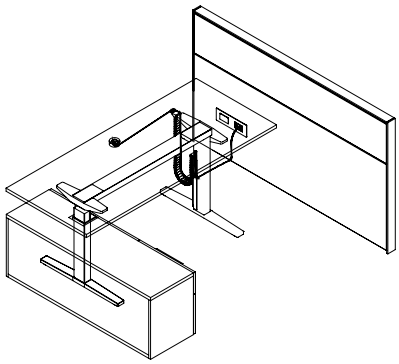

- Perpendicular Credenzas for Height-Adjustable Tables (UPPC) do not have the option of specifying a cut out
- Wires will be routed through the grommet to the power box in the panel

- Shared Perpendicular Credenzas for Height-Adjustable Tables (UPCS) do not have the option of specifying a cut out
- Wires will be routed through the grommet to the power box in panel

- Parallel Corridor Credenzas for Height-Adjustable Tables (UPCC) do not have the option of specifying a cut out
- There is no option to specify a Vertical Wire Carrier
- Wires will be routed through the grommet through to the Parallel Spine Credenza for Height-Adjustable Table (UPSC)

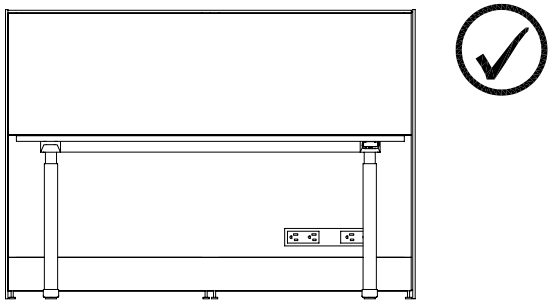

- If Parallel Corridor Credenzas for Height-Adjustable Tables (UPCC) are specified without a Parallel Spine Credenza for Height-Adjustable Table, a Vertical Wire Carrier (YEEE) should be specified separately
- Vertical Wire Carrier (YEEE) is available in Complements: *Teknion's Ergonomics & Accessories Program*

planning with credenzas for height-adjustable tables (continued)

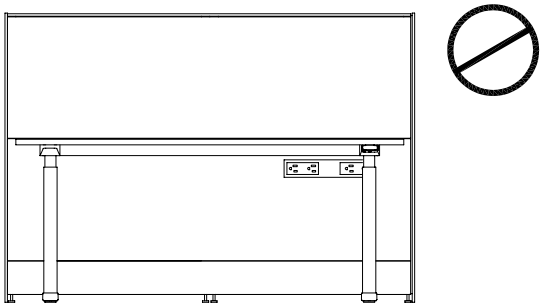

fascias

When specifying fascias on District panels to accommodate power, it is important to consider the location of the fascia with cut out to avoid interference with the height-adjustable table and/or credenza.

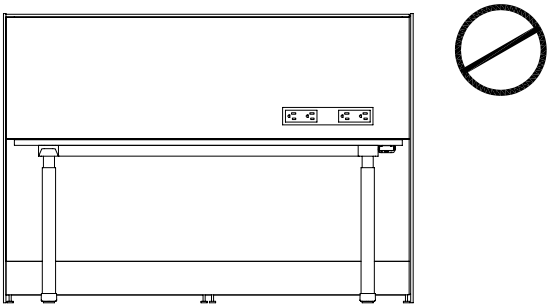

51" high District Panel with Fascias for Freestanding District with Power/Communication cut out bottom.

There is no interference with power cables plugged into the power box on the panel.

51" high District Panel with Fascias for Freestanding District with Power/Communications cut out top.

Location will cause interference with power cables plugged into the power box on the panel.

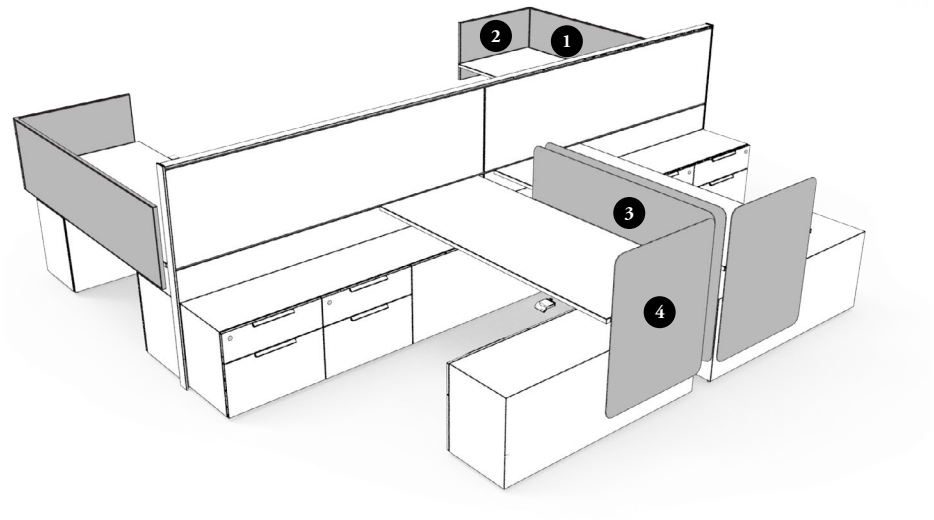

51" high District Panel with Fascias for Freestanding District with Power/Communications cut out Bottom

Location will cause interference with power cables plugged into the power box on the panel.

height-adjustable tables with screens overview

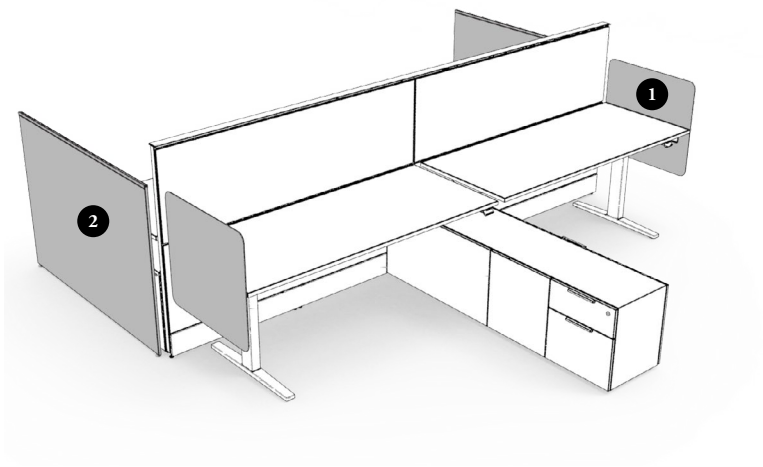

District Screens can be planned with height-adjustable tables and credenzas in both parallel and perpendicular applications.

perpendicular planning with height-adjustable tables and screens

1. Framed Fabric Desk Edge Screen (GYDD)
2. Framed Fabric Side Desk Edge Screen (GYSD)
3. Infinity Desk Edge Screen (GXDD)
4. Infinity Side Desk Edge Screen (GXSD)

parallel planning with height-adjustable tables and screens

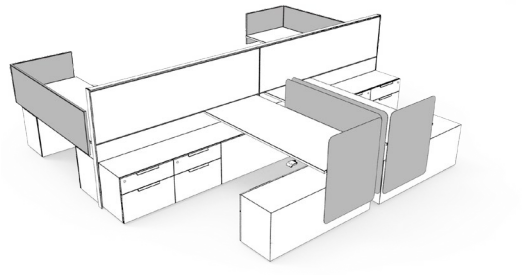

1. Infinity Side Desk Edge Screen (GXSD)
2. Storage Screen (UNSSS)

planning with height-adjustable tables and screens

The following should be considered when planning with navigate height-adjustable tables and screens.

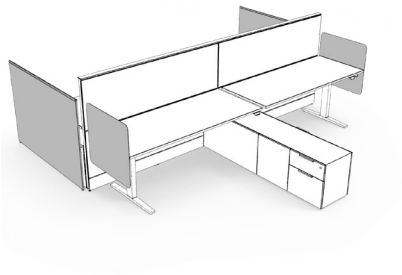

The following chart outlines the screens that can be used with height-adjustable tables when planning perpendicular to the panel spine

Screen Type	Perpendicular Planning
ALL Desk Edge Screens	✔
Curved Desk Edge Screens	✔
Desktop Casual Screen	✔
HAB Study Carrel	
Modesty Screens	✔
ALL Desk Edge Floor Screens	
Storage Screens	
Lateral Floor Screens	
Desktop Lateral Screens	
Glass Desk Edge Screens	

✔ **Applicable**

The following chart outlines the screens that can be used with height-adjustable tables when planning parallel to the panel spine

Screen Type	Parallel Planning
ALL Desk Edge Screens	
Curved Desk Edge Screens	
Desktop Casual Screen	✔
HAB Study Carrel	
Modesty Screens	
ALL Desk Edge Floor Screens	
Storage Screens	✔
Lateral Floor Screens	
Desktop Lateral Screens	✔
Glass Desk Edge Screens	

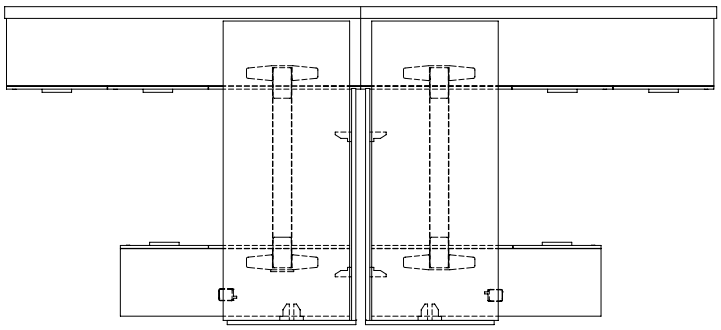

✔ **Applicable**

planning with height-adjustable tables and screens (continued)

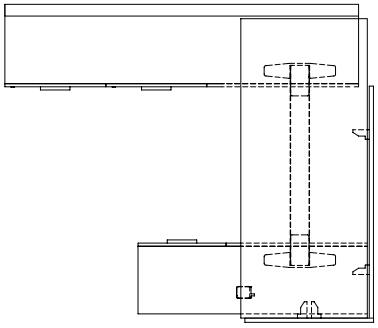

gapping

When planning with screens on perpendicular worksurfaces, ensure that there are proper pinch gaps between credenzas and screens.

The cut out is wide enough to accommodate various planning configurations.

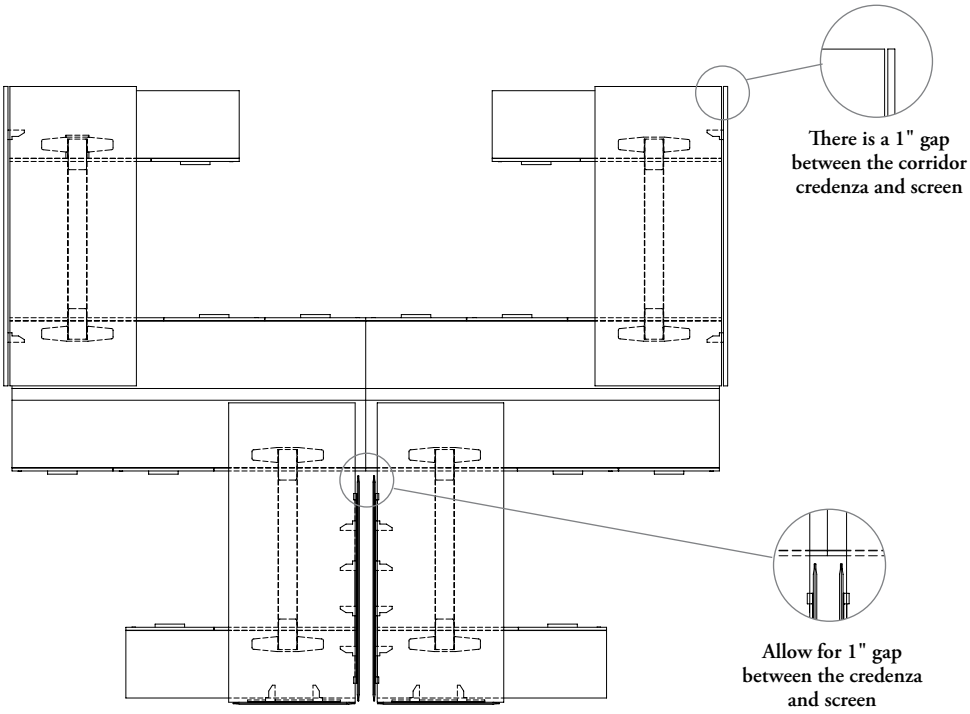

Height-adjustable table can shift back 3" to allow for the recommended pinch gap when specifying desk edge screens in face-to-face applications.

Height-adjustable table can shift forward to allow for screen to overlap credenza.

When specifying screens attached to height-adjustable tables, there should always be a 1" gap to avoid pinch points.

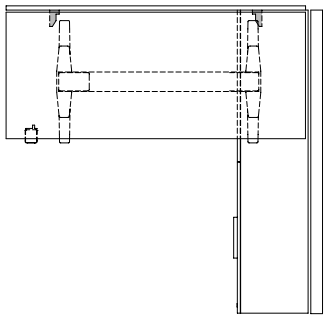

planning with navigate height-adjustable tables and screens (continued)

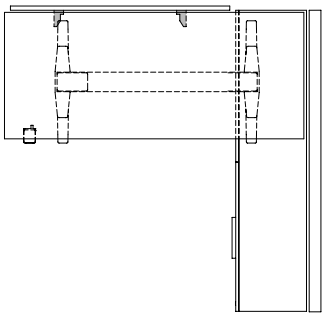

desk edge screens

The following screen types can be specified on height-adjustable tables, either full or partial width:
- Desk Edge Screen (UNSDE)
- Infinity Desk Edge Screen (GXDD)
- Framed Fabric Desk Edge Screen (GYDD)

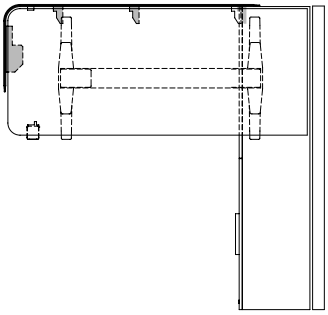

Glass screens should not be used on height-adjustable tables.

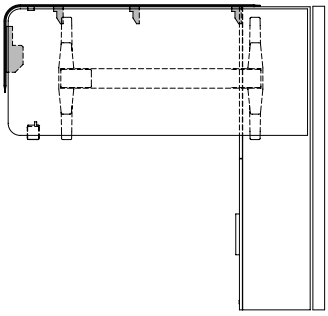

Desk Edge Screens can span entire width of worksurface.

Height-adjustable tables can be pushed back in spine credenza with Desk Edge Screens spanning only part of the width of the worksurface.

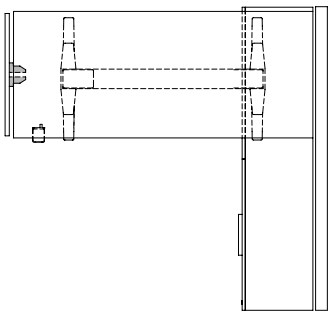

Infinity Curved Desk Edge Screen (GXCD) can span along the front edge of the worksurface.

Height-adjustable tables can be pushed back in spine credenza with Infinity Curved Desk Edge Screen (GXCD) screen spanning only part of the worksurface.

side desk edge screens

The following screen types can be specified on height-adjustable tables with T-Legs:
- Framed Fabric Side Desk Edge Screen (GYSD)
- Infinity Side Desk Edge Screen (GXSD)

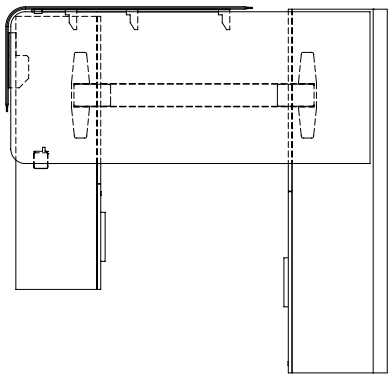

Side Desk Edge Screen on a Navigate Height-Adjustability Built-in Base - Perpendicular Planning with T-Legs.

planning with navigate height-adjustable tables and screens (continued)

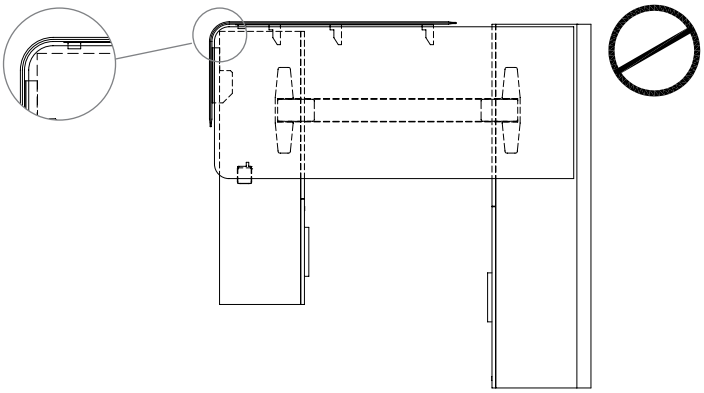

curved infinity desk edge screens

Curved Infinity Desk Edge Screens are available with and without wire management.

The option of no wire management must be specified if there is a Parallel Corridor Credenza for Height-Adjustable Table (UPCC) with a Curved Infinity Desk Edge Screen (GXCD).

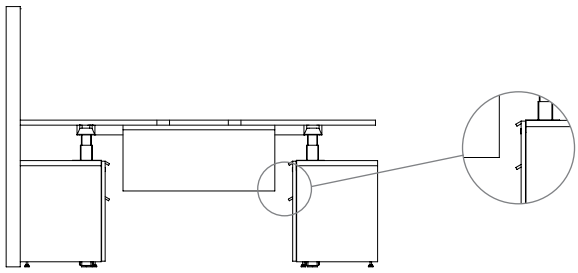

No wire management.

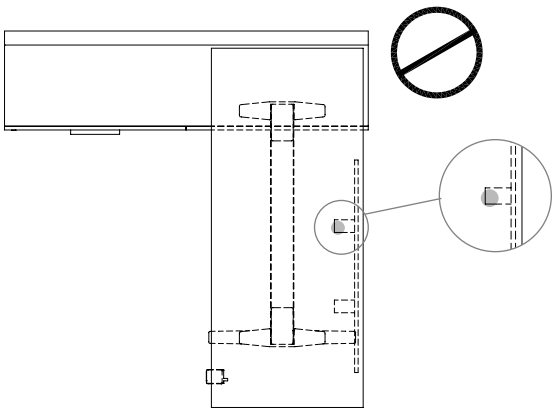

Wire management interferes with credenza if Height-adjustable table is moved up/down.

modesty screens

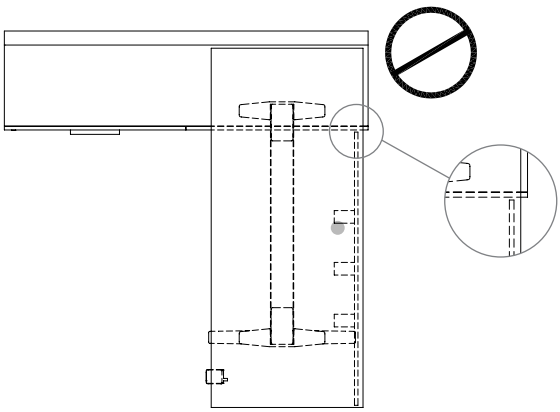

Allow minimum 1" gap between Modesty Screen (UNSM) and credenzas.

When planning with modesty screens, there could be interference with cut outs and credenzas for height-adjustable tables.

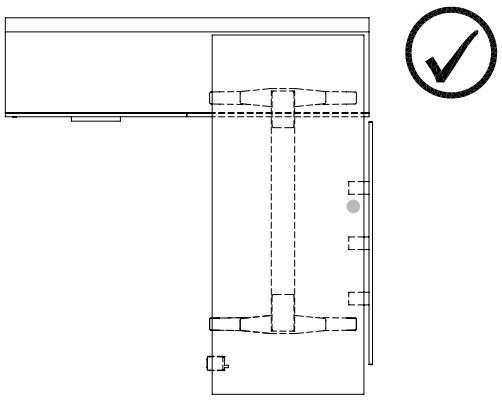

Modesty panel interferes with cut out when centered between the edge of the worksurface and credenzas.

There is a 1" pinch gap between the modesty panel and credenza. There is interference between the modesty panel and cut out.

planning with navigate height-adjustable tables and screens (continued)

Modesty panel is centered on the worksurface and does not interfere with cut out.

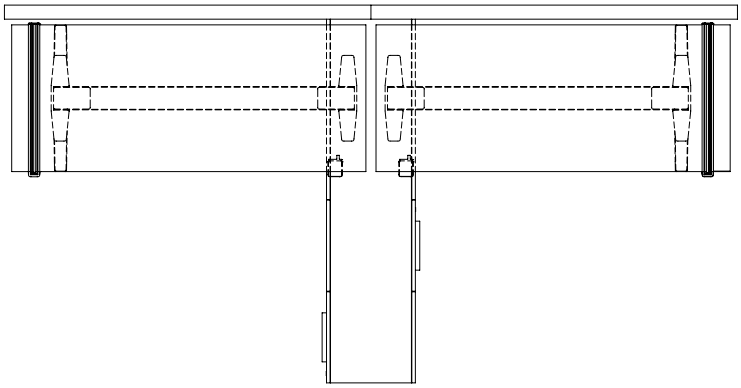

planning with navigate height-adjustable tables and screens (continued)

lateral screens

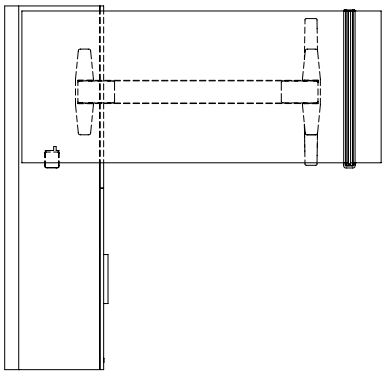

All lateral screens can only be planned with height-adjustable worksurfaces that are parallel to the panel spine.

• Lateral screens have nominal depths and can be specified to parallel worksurfaces.

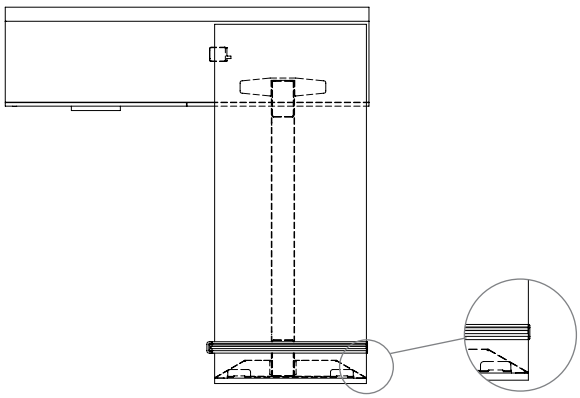

• Actual depths of lateral screens are:
- 24" deep is 23" deep
- 30" deep is 29" deep
- 36" deep is 35" deep

Parallel Rectangular Height-Adjustable Built-In Worksurfaces (WHD) can accommodate all lateral screens.

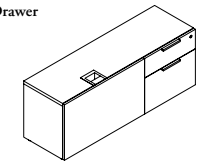

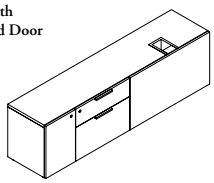

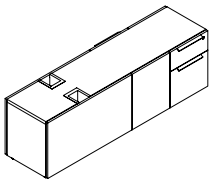

When specifying a lateral screen on a Height-Adjustable Built-in Gable Base - Parallel Planning (YHD), the screen must be inserted so it does not interfere with the base.

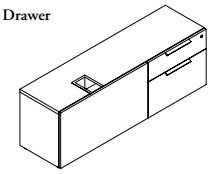

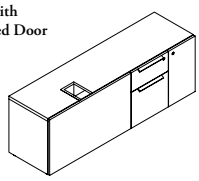

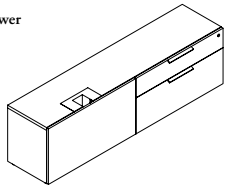

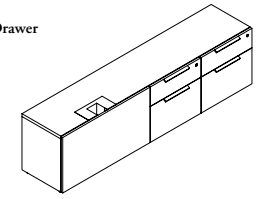

Lateral screen depths are 29" and **cannot** be planned with 30" deep Perpendicular Rectangular Height-Adjustable Built-In Worksurfaces.

PLANNING WITH KEYBOARD TRAYS 237

understanding district support

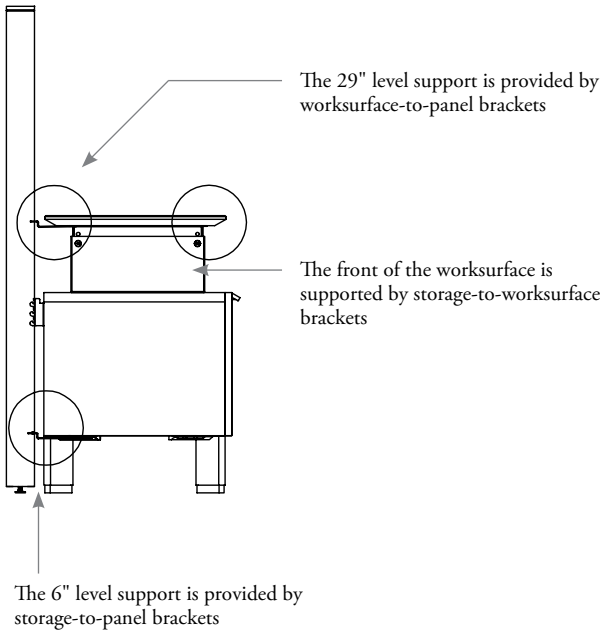

The following outlines the guidelines for supporting panels and worksurfaces in panel-mounted applications.

- When planning with District panels, the end of run conditions must be supported at 6" and 29" high and at the front of a worksurface or storage. There are different ways of providing support, depending on whether storage or end gables are used
- When properly supported, the method of support forms a triangle

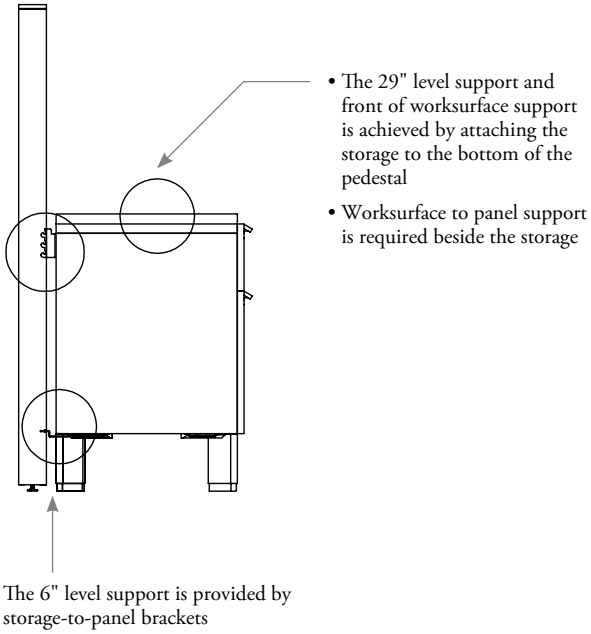

end of run with no storage

end of run with low storage

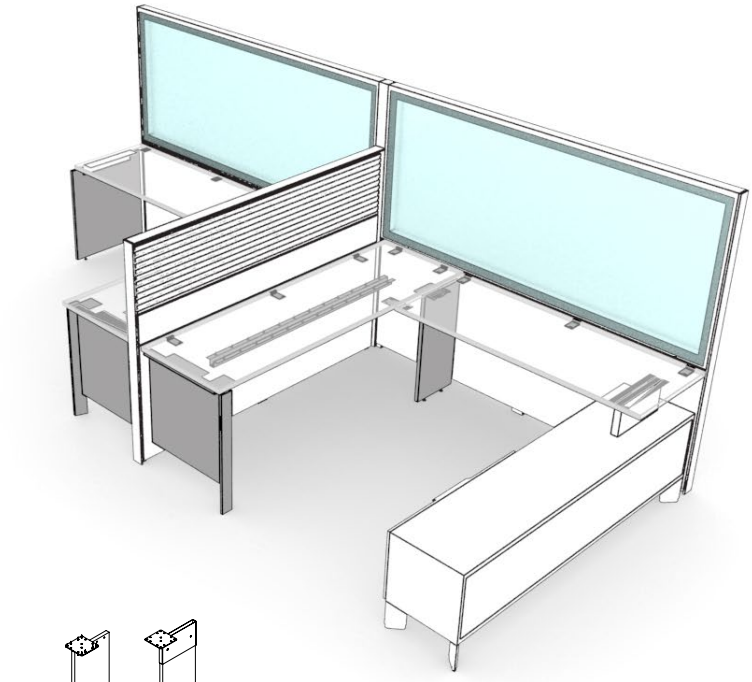

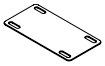

end of run with high storage

worksurface support basics – horizontal

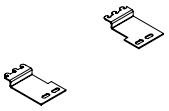

The following outlines the features of supports that connect horizontally, either below worksurfaces, or for connecting worksurface to panel walls.

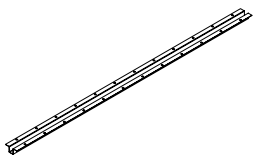

Flush Plate (UNRF)

- Used in conjunction with other supports to maintain alignment of worksurfaces
- **Cannot** be used in freestanding applications, is used in panel wall application only
- **Not** required when cantilevers are used

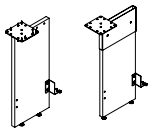

Worksurface Panel Wall Brackets (UNBP)

- Off-module connectors that attach the worksurface to a Panel Wall
- Are mounted in the 29" high horizontal rail and can be connected at any point along the width of the worksurface and Panel Wall but must be spaced minimally every 48"
- Are **not** height-adjustable
- **Cannot** be used on Elevated or Convertible Panel Walls with Inset (UYPER, UYPCR)

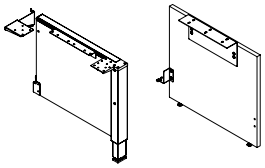

Worksurface Reinforcement Channel (UNRC)

- Adds rigidity to worksurface to reduce deflection in the worksurface
- Required for all worksurfaces with an unsupported span over 48"

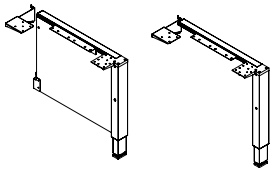

Mid Gable (UNGMF) and Mid Gable – Height-Adjustable (UNGMFA)

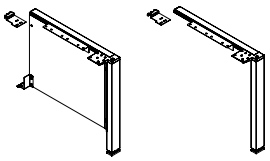

- Used on worksurface spans larger than 72" to provide additional floor support or to join two worksurfaces, also includes a bracket at the 6" high level to provide support to the panel wall if required
- (UNGMFA) offers a height-adjustable leveling option with a range of 3" (2" above and 1" below worksurface)

Flush End Gable (UNGEF) and Flush End Gable – Height-Adjustable (UNGEFA)

- Consists of a solid gable and a support to allow to be attached to the underside of a worksurface and to a panel available in depths to match 17", 20", 24", 30", 36" deep worksurfaces
- Available in depths to match 17", 20" 24" 30" and 36" deep worksurfaces
- (UNGEFA) offers a height-adjustable leveling option with a range of 3" (2" above and 1" below worksurface)
- Provides floor support to a panel wall at the end of worksurface run and also has a bracket at the 6" high level to provide panel support

End Gable (UNGEN) and End Gable – Height-Adjustable (UNGEAN)

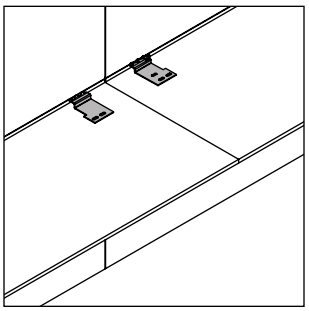

- Consists of a single leg and a support to allow it to be attached to the underside of a worksurface and to the panel to provide floor support to a panel wall at the end of a worksurface run available in depths to match 17", 20", 24", 30", 36" deep worksurfaces
- Available in depths to match 17", 20" 24" 30" and 36" deep worksurfaces
- Available open or with an infill panel
- The infill has a bracket at the 6" high level and is used when panel support is required at the 6" level - the no infill option **cannot** be used for supporting panels as it does **not** include the bracket
- (UNGEAN) offers a height-adjustable leveling option with a range of 6" (3" above and 3" below worksurface) and is available with or without an infill
- **Cannot** be used on Elevated or Convertible Panel Walls with Inset (UYPER, UYPCR)

planning with worksurface supports – horizontal

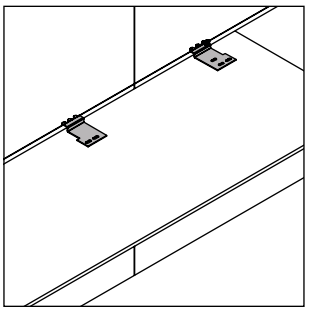

The following should be considered when planning with worksurface horizontal supports.

Worksurface Panel Wall Brackets

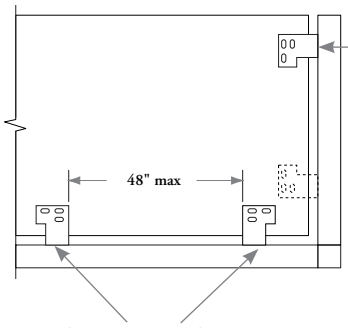

• Panel wall brackets mount into the 29" high horizontal rail of the panel wall, to support worksurface on- or off-module

On-Module worksurface shown

Off-Module worksurface shown

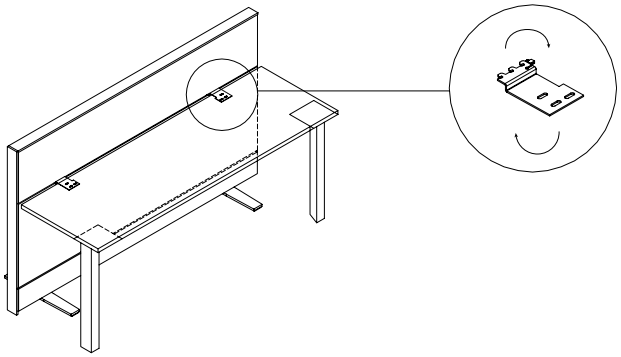

• A corner bracket located at the side edge can support worksurface end when it **cannot** be located along the back edge

• Typically worksurface ends only require one bracket towards the user edge for support

• Brackets are required at every 48" along a worksurface

• At least one left and one right bracket should be used for anti-dislodgement – brackets are packaged in pairs, one right and one left

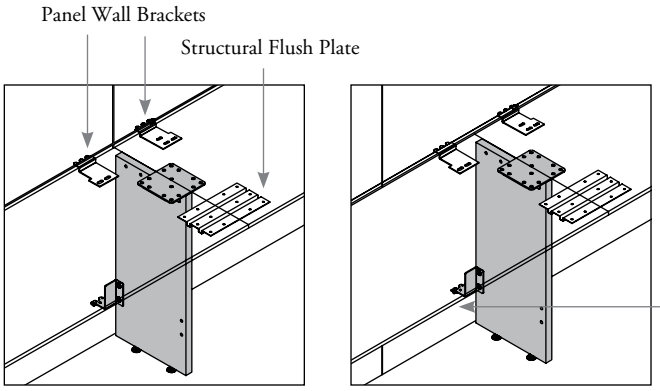

When mounting a worksurface to a freestanding panel with an accessory rail, the Worksurface Panel Wall Bracket (UNBP) must be rotated 180˚ to have the worksurface reach a 28" datum.

planning with worksurface supports – horizontal (continued)

Mid Gable and Mid Gable – Height-Adjustable

• The 12" deep mid gable is used for 20" and 24" deep worksurfaces and the 18" deep half gable is used for 30" and 36" deep worksurfaces

On-Module

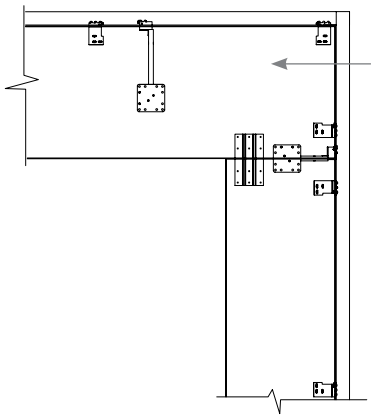

Off-Module

• The mid gable provides support to the panel by mounting to the 6" rail

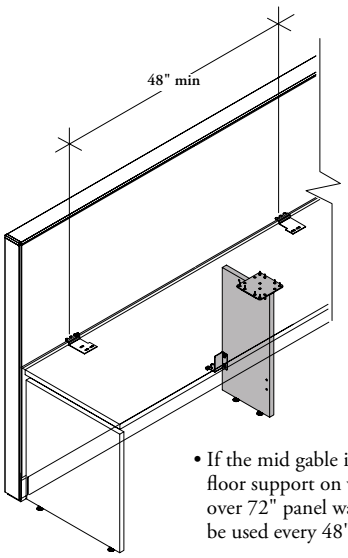

• A 22" high and 6" high fascia must be specified for use with the gable (See Fascias section for details)

• Worksurface panel wall brackets are required on either side of the mid gable when connecting two worksurfaces

• A Structural Flush Plate is required at the front of the surfaces to maintain alignment

• Worksurfaces on- or off-module in straight runs or in L-shaped configurations are used to connect or support

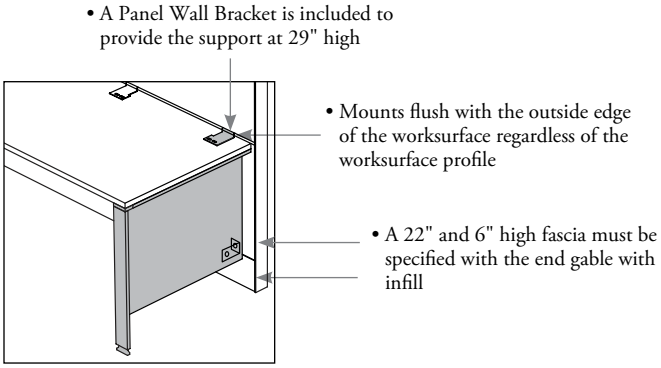

• If the mid gable is used for additional floor support on worksurface runs over 72" panel wall brackets must still be used every 48"

planning with worksurface supports – horizontal (continued)

End Gable and End Gable – Height-Adjustable

• End gables mount into the 6" and 29" high levels to provide support to the end of a panel run

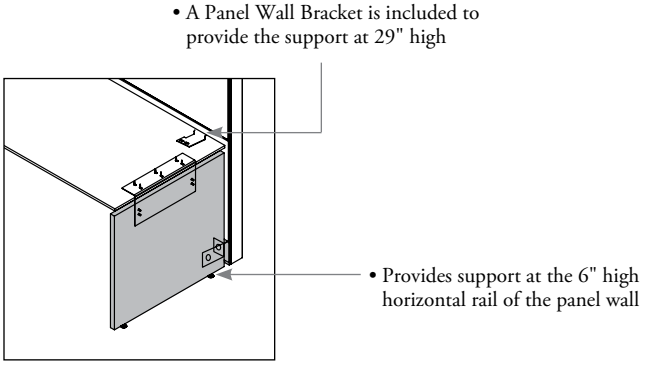

• The infill panel option includes a mounting bracket at the 6" high level so must be used when support is required at the 6" horizontal level

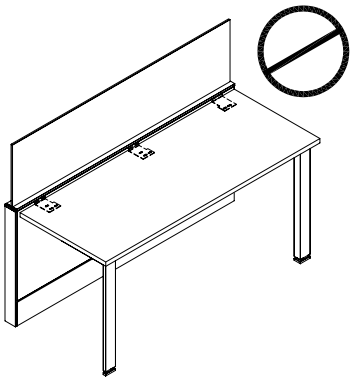

• The bottom edge of the infill panel aligns with the 6" high horizontal rail

• On the height-adjustable option, it has a different bracket which attaches to the vertical channel of the frame and travels up and down with the infill

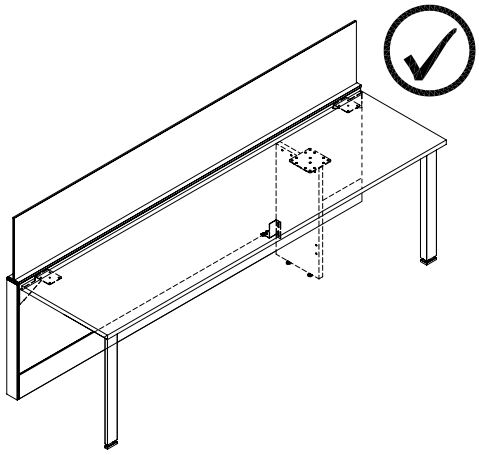

Flush End Gable and Flush End Gable – Height-Adjustable

• Provides the same support as an end gable, but is solid to provide an alternative aesthetic

Worksurfaces **cannot** be mounted to 29" high Panel Walls with Inset Glass using Worksurface Panel Wall Bracket (UNBP) due to restricted access to the top horizontal rails.

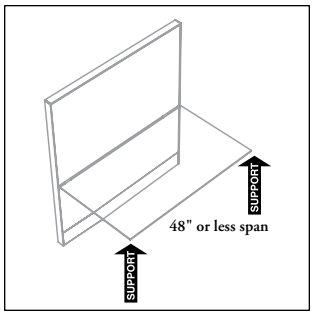

To accommodate 29" high Panels with Inset Glass with a worksurface mounted you must specify a Worksurface Panel Wall Bracket – Height Adjustable (UNBPA) on either end of the worksurface. If the Panel width is greater than 72" a Mid Gable (UNGMF) must also be specified every 72".

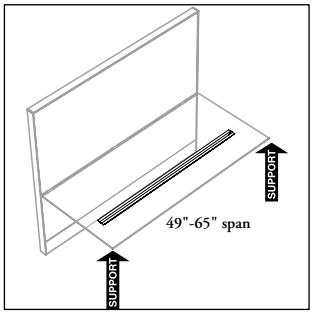

planning with worksurface supports – horizontal (continued)

reinforcement channel requirements

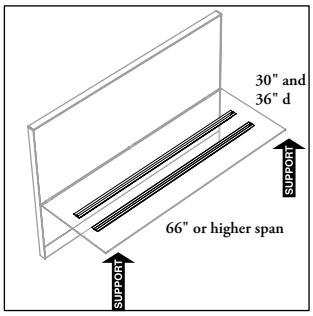

- When a worksurface has an unsupported span of a 48" or more reinforcement channels are required
- The unsupported span is the distance between two supports or storage units

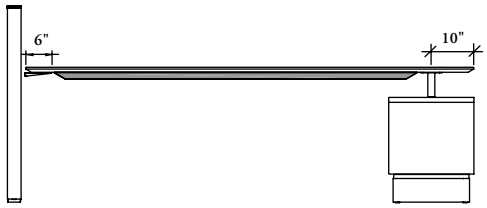

For unsupported spans 48" or less, no reinforcement channels are required for all depths of worksurfaces.

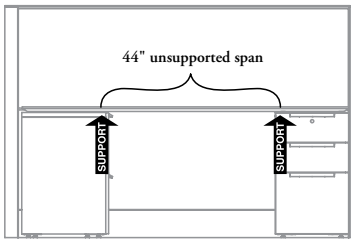

For unsupported spans from 49" to 65", one reinforcement channel only is required for all depths of worksurfaces.

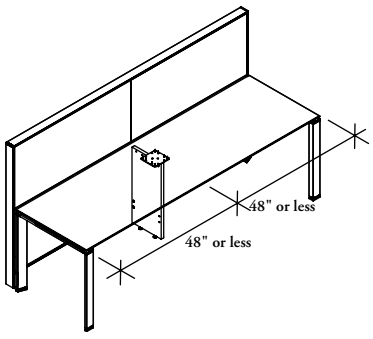

- Worksurfaces 30" or 36" deep two reinforcement channels are required
- One reinforcement channel is required on worksurfaces 24" deep

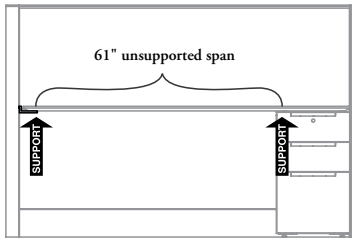

- A deduction allowance can be given for the mounting plates on supports
- Allow 6" for all supports except: for the low credenza worksurface support 10"
- The reconfigurable low credenza worksurface bracket which is either 16" or 19"

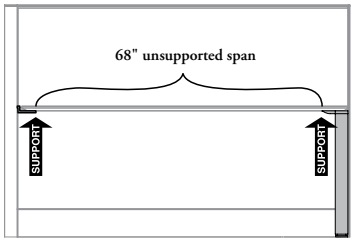

- Example: a 78" wide worksurface supported by a pedestal and a 19" deep credenza has an unsupported span of 44"
- No reinforcement channel is required because the unsupported span is less than 48"

- When planning with surfaces wider than 72" that will require secondary floor support, consider placing the support where it will shorten the unsupported distance on each side to 48" or less
- No reinforcement channel will be required, this is important to consider when planning with keyboard trays

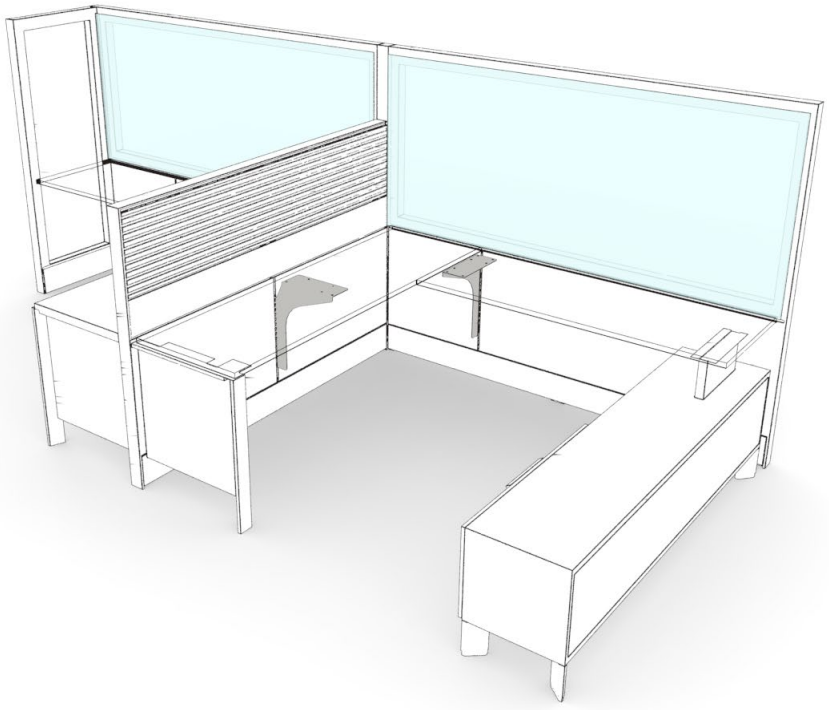

- Example: a 78" wide worksurface supported by a pedestal and panel brackets has a unsupported span of 61"
- One reinforcement channel is required

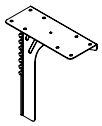

- Example: a 78" wide worksurface supported by a gable and panel brackets has an unsupported span at 66"
- 2 reinforcement channels are required if the surface is 30" or 36" deep

worksurface support basics – vertical

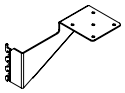

The following outlines the features of vertical supports that allow for height-adjustable worksurface mounting.

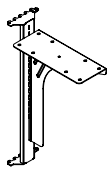

Cantilever (UNLVR)

- Mounts into the center vertical channel of a panel wall over 60" wide to provide on module height-adjustable worksurface support at 1" increments available in depths of 11" and 14"
- Available in depths to match 11" and 14"

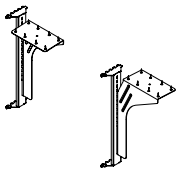

Worksurface Panel Wall Bracket – Height-Adjustable (UNBPA)

- Mounts into the vertical channel at the end of a Panel Wall to provide on-module height-adjustable support for worksurfaces
- Used with Flush Full-Height Windows – Single and Double Glazed (UNPFWS, UNPFWD) to support worksurfaces as no horizontal channel is available at 29" high

Off-Module Cantilever (UNLVFN)

- Mounts in the 6" and 29" horizontal channels of the Panel Wall to allow for height-adjustable off-module applications
- Can be used in place of the Mid Gable (UNGMF) and Height-Adjustable Mid Gable (UNGMFA), height-adjustable on an elevated panel as it does **not** extend below the 6" horizontal rail available in depths of 11" and 14"
- Available in depths to match 11" and 14"
- **Cannot** be used on Elevated or Convertible Panel Walls with Inset (UYPER, UYPCR)

Off-Module Cantilever for Panels with Accessory Beam (UALVFN)

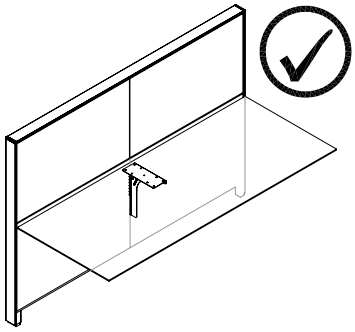

- Available in depths to match 11" and 14"
- Left or Right handed available
- Mounts to the horizontal channel of the panel to provide on-module height-adjustable worksurface support at 1" increments
- Used only when using a panel frame with accessory rail in order to accommodate the gap from the beam

planning with panel-mounted cantilevered supports

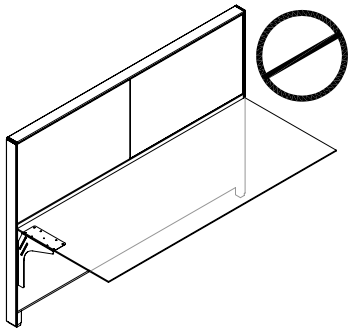

The following should be considered when planning with cantilevered height-adjustable supports.

- On worksurfaces attached to panel walls, support is required every four feet and secondary floor support every six feet
- Cantilevers are **not** considered floor support

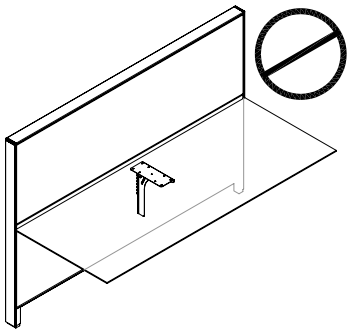

Cantilever (UNLVR)

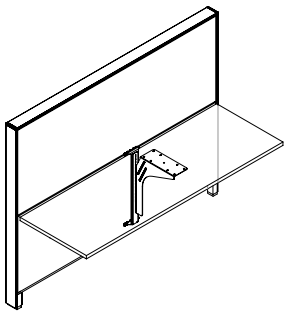

- Cantilevers mount vertically so are used only in the middle of a panel run where there is a vertical break in the panel (including one panel wider than 66" with split fascias)

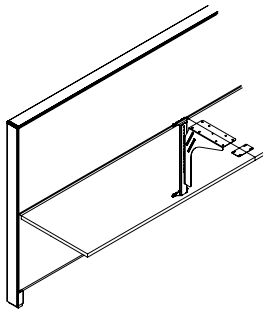

- **Cannot** be used as an end-of-run support

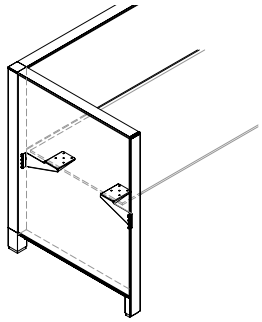

- **Cannot** be used on panels less than 60" wide because there is no center vertical frame to attach to

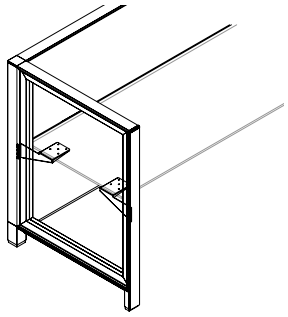

Off-Module Cantilever (UNLVF)

- Placed directly below a worksurface or the connection of two worksurfaces and can be mounted anywhere along the length of a panel
- Is mounted into the horizontal rails of the panel (6" and 29")
- The flange is wide enough to span the connection (with or without knife-edge worksurfaces)
- A Flush Plate should be used for added alignment if used at the intersection of two surfaces
- A 22" and 6" lower fascia are required for use with this cantilever if a flush panel is used
- Recommended for use with Elevated Panel Walls because the bracket does **not** extend below the 6" horizontal rail

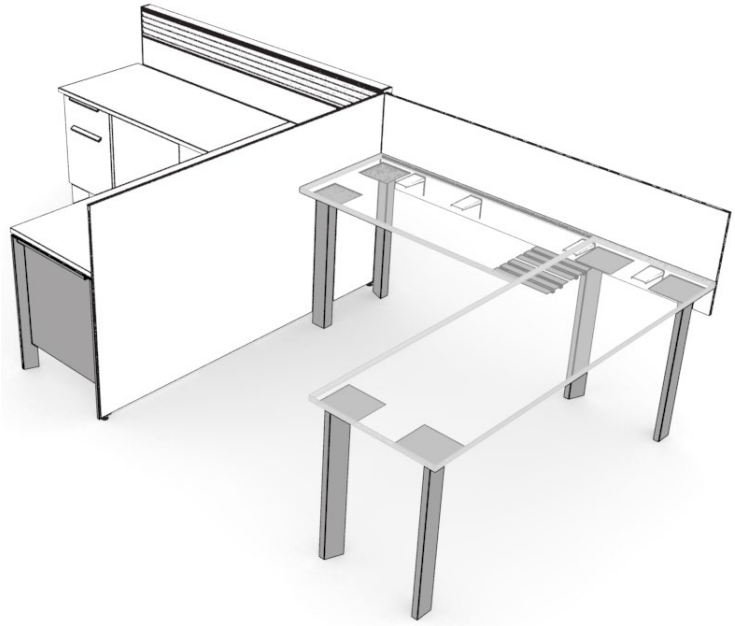

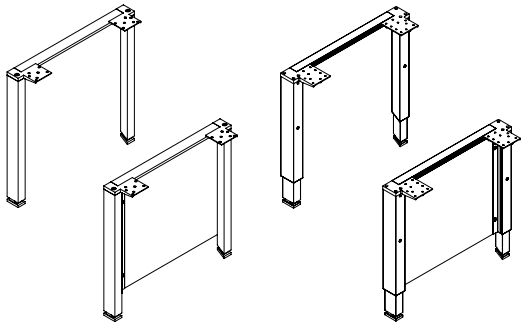

Worksurface Panel Wall Bracket – Height-Adjustable (UNBPA)

- Hooks into the vertical channel at the end of a panel wall only to provide height-adjustable support
- Is an on-module bracket only
- Can be used for non height-adjustable mounting with Flush Full-Height Windows – Single and Double Glass (UNPEWSR, UNPFWDR) where no horizontal channel is available at 29" high

worksurface support, freestanding basics

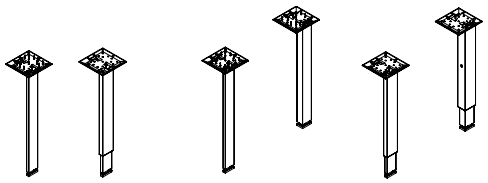

The following outlines the features of supports that are typically used in freestanding or semi-supported environments.

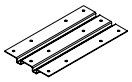

Semi-Suspended Gable (UNGSN) and Semi-Suspended Gable – Height-Adjustable (UNGSAN)

- Consists of two legs and a support, and is used at the open end of a panel wall mounted semi-suspended worksurface
- Available with or without an infill, standard or height-adjustable
- Have a height-adjustable range of 6" (3" above and 3" below)

Leg – Single (UNLGN), Leg – Height- Adjustable Single (UNLGA), Leg – Pair (UNLGPN) and Leg – Height-Adjustable Pair (UNLGPA)

- Used primarily in freestanding applications to provide worksurface support but can also be used for intermediate support in panel wall applications
- Available in single or pairs, standard or height-adjustable
- Have a height-adjustable range of 6" (3" above and 3" below)

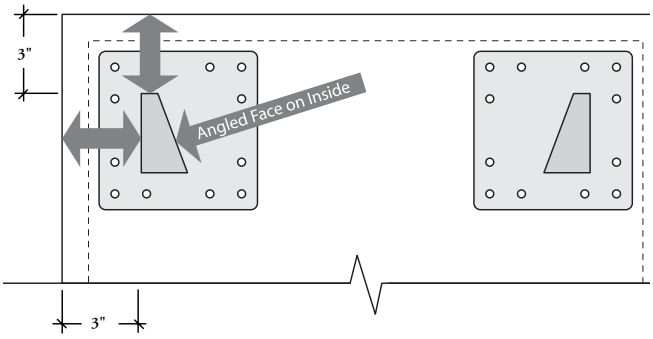

Structural Flush Plate (UNRFS)

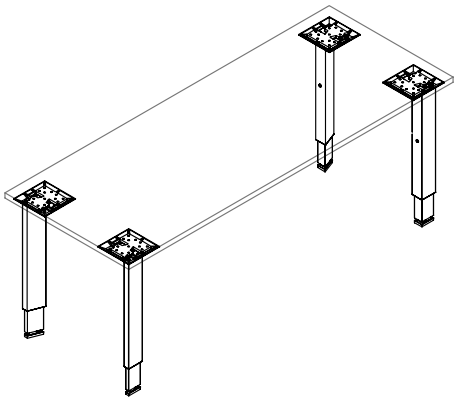

- Used to join two worksurfaces in freestanding application
- Two Structural Flush Plates used with a leg provides the required stability to create freestanding desks

planning with worksurface supports, freestanding

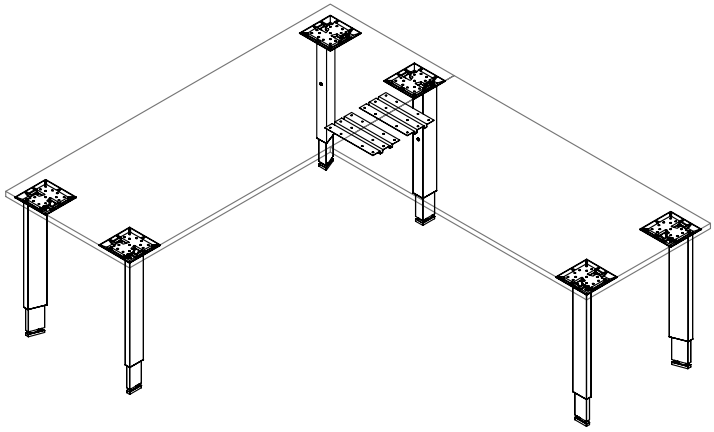

The following should be considered when planning with freestanding supports.

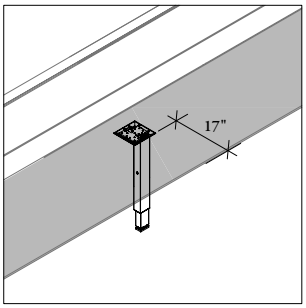

When post legs are used at the end of a worksurface the legs are inset from each end by 3" and the angled face is always on the inside

Freestanding desks can be created using a District worksurface and either two pairs or four single legs.

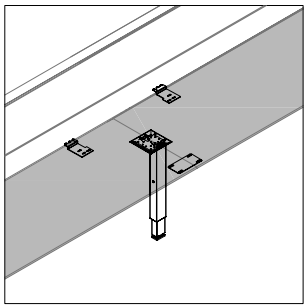

When an "L" shaped freestanding workstation is created the leg between the two worksurfaces is **not** shared, it mounts to one worksurface and two Structural Flush Plates are used to connect the two surfaces.

Leg as an Intermediate Support

- A leg can be used as an intermediate support to provide floor support
- The position on the leg is the same regardless of the worksurface edge profile, and is always 17" from the user edge of the worksurface

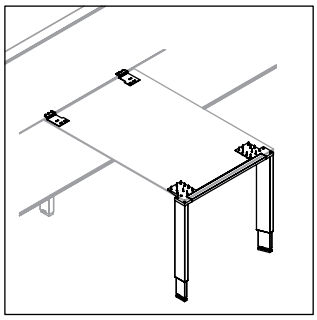

Leg as a Shared Intermediate Support

- When used in a shared position one leg supports both worksurfaces, and the 3" flat worksurface of the Post Leg is oriented toward the user
- A Flush Plate is required to align the two surfaces

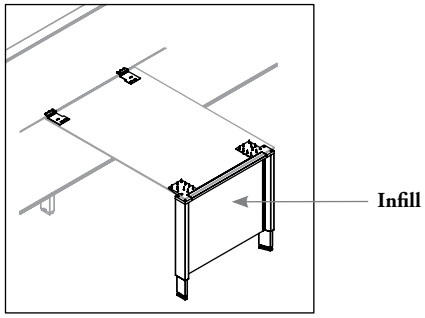

planning with semi-suspended supports

The following should be considered when planning with semi-suspended supports.

Semi-Suspended Gable (UNGSN) and Height–Adjustable Semi-Suspended Gable (UNGSAN)

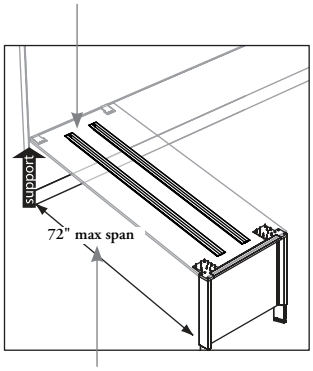

- Has a horizontal bar connecting the two legs for added support in semi panel-mounted applications

- An infill is **not** necessary for rigidity of a Semi-Suspended Gable. It is an aesthetic option for matching panel-mounted gables with infills

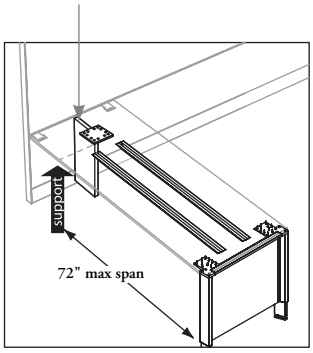

mounting semi-suspended surfaces to panel walls

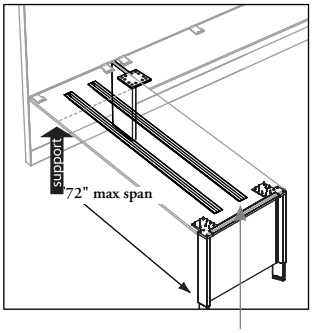

- Two Worksurface Panel Wall Brackets (UNBP) are required on any panel supported worksurface end

- The maximum width of the worksurface is 72" unless additional floor support is added

- The size of the semi-supported worksurface can be increased using a half depth gable to reduce the unsupported span

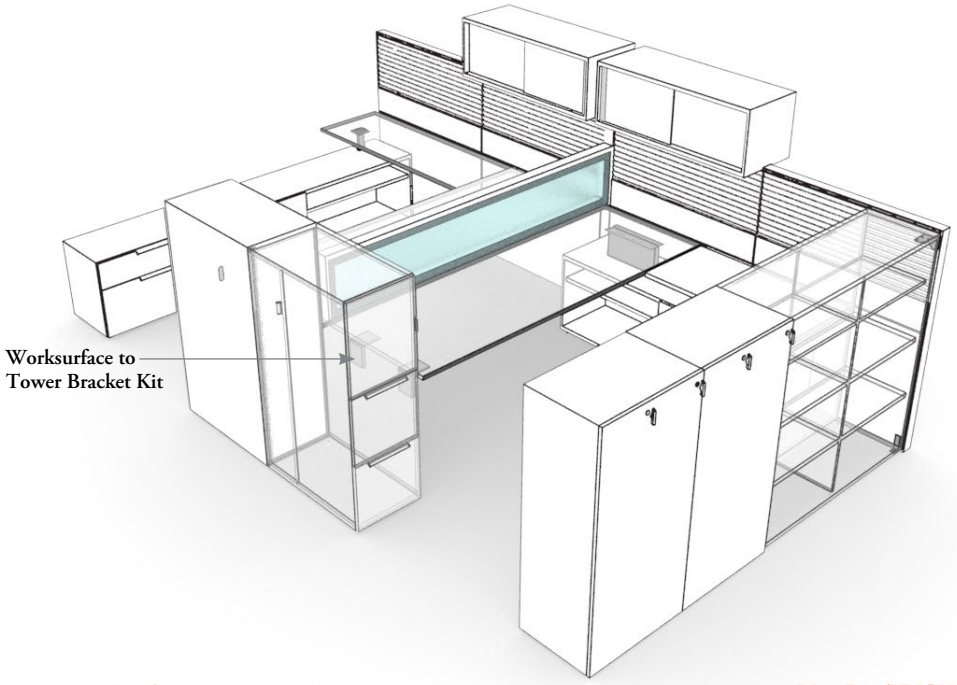

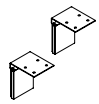

- Mid Gables (UNGMF) or Cantilevers should be used at connections between panel supported and semi-supported worksurfaces

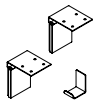

worksurface-to-storage support basics

The following outlines the features of supports that connect storage to panel walls, worksurfaces and walls.

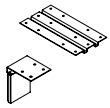

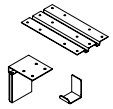

2 Brackets

2 Brackets/One Hook

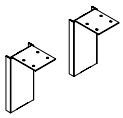

1 Bracket/1 Flush Plate

1 Bracket/1 Flush Plate/
One Hook

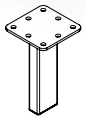

Worksurface-to-Tower Bracket Kit (UWBT)

- Used to attach worksurfaces to storage components
- Available with four options:
  - (BB) two brackets, which are used with storage with no cubbies – the brackets attach to the underside of the worksurface and the side of the storage
  - (HB) two brackets, one hook, which are used with storage with no cubbies – the brackets attach to the underside of the worksurface and the side of the storage, and the hook attaches to the bracket to hang personal items
  - (BF) one bracket, one flush plate, which are used with storage with cubbies – the bracket attaches to the underside of the worksurface and the side of the storage, and the flush plate attaches the worksurfaces and a shelf in the cubby section of the storage
  - (HF) one bracket, one flush plate, one hook, which are used with storage with cubbies – the bracket attaches to the underside of the worksurface and the side of the storage, the flush plate attaches the worksurfaces and a shelf in the cubby section of the storage, and the hook attaches to the bracket to hang personal items

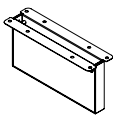

Height-Adjustable Worksurface-to-Tower Bracket Kit (UWBTH)

- **Cannot** be used on a Pedestal Tower with Cubby Back (UTDC), see the *District Storage Price & Application Guide*.

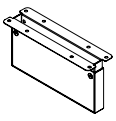

Mini Leg (UNCLN)

- Used in place of the Low Credenza Worksurface Support (UNCPWN) when panel support and height-adjustability is **not** required because it does **not** attach the storage, it simply rests on it
- **Cannot** be used in freestanding desking applications
- Must be used with Worksurface Panel Wall Bracket (UNBP) and Storage-to-Panel Bracket (UWSPB). This combination provides support to panels

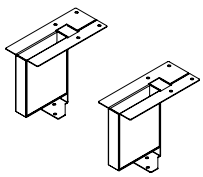

Fixed-Height

Height-Adjustable

Low Credenza-to-Worksurface Supports (UNCPWN)

- Mount to the underside of a worksurface and to the top of a Low Credenza to provide support to the worksurface
- When used in combination with the Worksurface Panel Wall Bracket (UNBP) and Storage-to-Panel Bracket (UWSPB), support is provided for panels
- Offer a height-adjustable leveling option with a range of 4" (3" above the fixed height of 7" or 1" below the fixed height of 7")

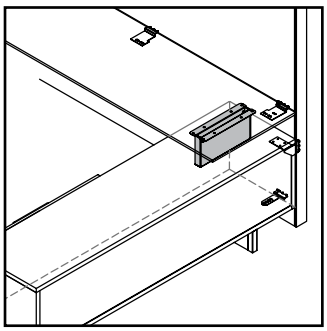

Reconfigurable Low Credenza-to-Worksurface Support (UWCPWN)

- Mounts to the underside of the worksurface, wraps around the top of an open compartment on low storage and attach to the underside of the open section
- Does **not** attach to the top of a storage unit, therefore **not** making it to allow for reconfigurability
- Is **not** height-adjustable

planning with worksurface to storage supports

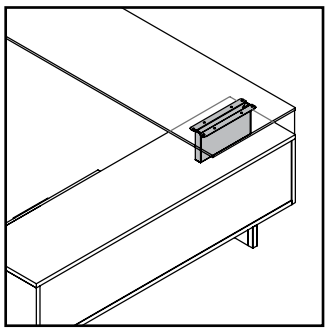

The following should be considered when planning with worksurface to storage supports.

Low Credenza-to-Worksurface Supports (UNCPWN)

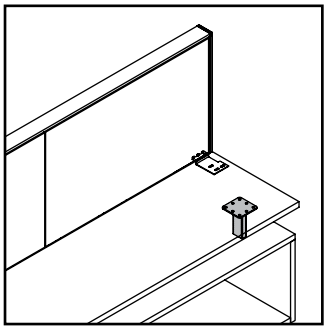

panel-mounted

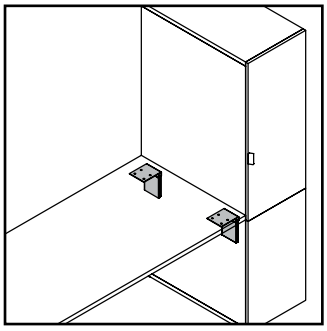

- Can be used in panel-mounted applications to support the front of the worksurface
- Attaches the bottom of a worksurface to the top of a low credenza
- Does **not** add rigidity to the panel on its own; worksurface and storage supports must be specified at the 6", at 29" to give adequate support

freestanding

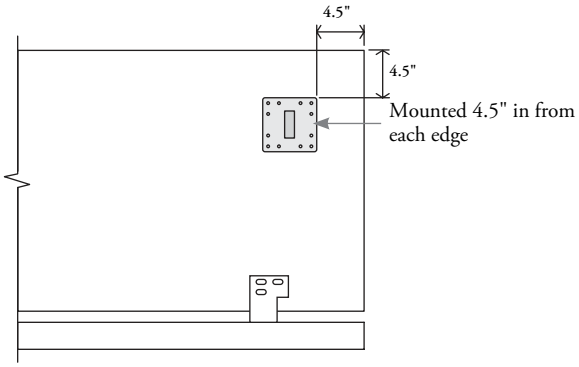

- Can be used in freestanding applications to attach the bottom of a worksurface to the top of a low credenza
- Is available in a height-adjustable option

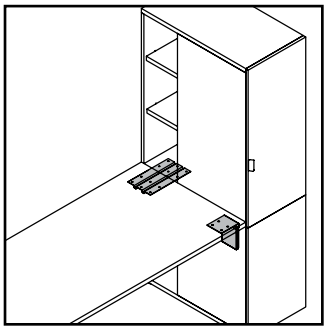

Worksurface-to-Tower Bracket Kit (UWBTBB) – (2 brackets)
Height-Adjustable Worksurface-to-Tower Bracket Kit (UNBTHBB) – (2 brackets)

- When mounting worksurfaces to storage, two brackets are required for support
- **Cannot** be used with storage with cubbies

Mini Leg (UNCLN)

- Is an alternative support used to support the front of a worksurface over a low credenza in panel-mounted applications
- **Cannot** be used in freestanding desking applications because the support rests on top of the credenza without being fastened to it
- Is **not** height-adjustable

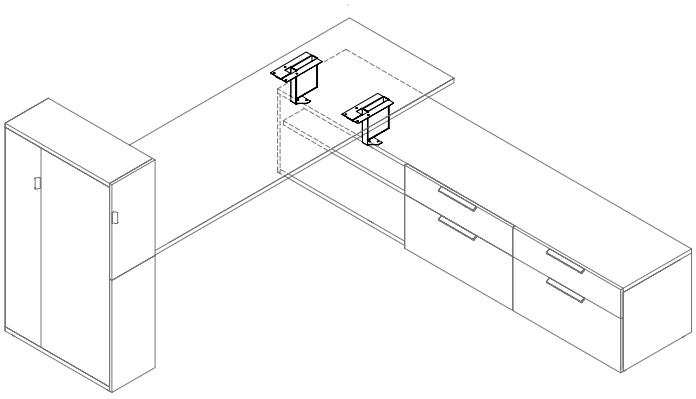

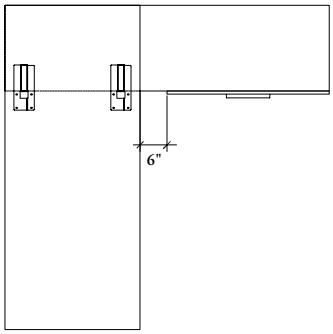

Worksurface-to-Tower Bracket Kit (UWBTBF) – (1 bracket, flush plate)
Height-Adjustable Worksurface-to-Tower Bracket Kit (UNBTHBF) –

- When mounting worksurfaces to storage with cubbies, the option for bracket with flush plate must be selected – the flush plate attaches the worksurface to a shelf in the storage

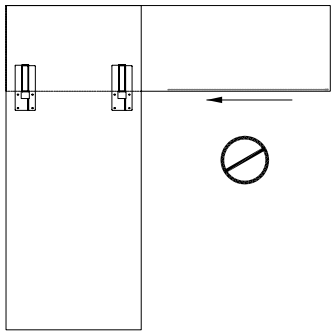

planning with worksurface to storage support (continued)

Reconfigurable Low Credenza-to-Worksurface Support (UWCPWN)

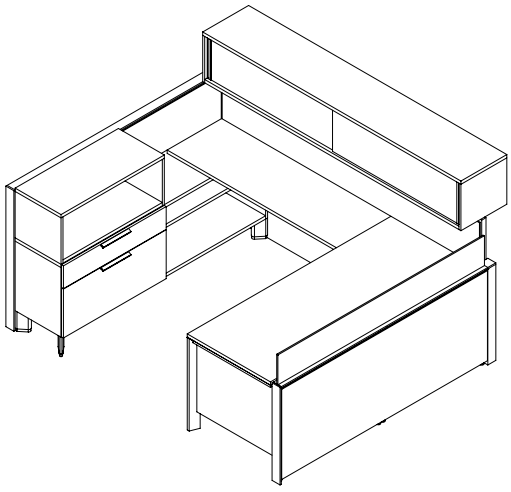

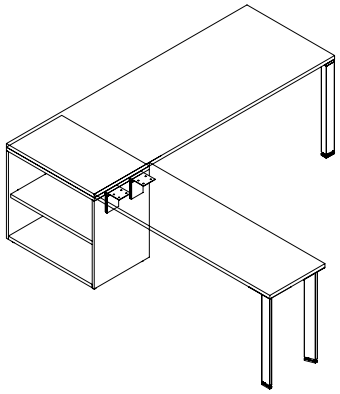

- The brackets are mounted towards the edges of the worksurface
- The open section of the storage below **cannot** be more than 6" wider than the worksurface to which it is attached to provide adequate support, therefore, a 24" deep worksurface **cannot** mount to the 36" wide open cubby of a 72", 84" or 96" wide credenza; the width difference is more than 6"

The sliding door credenza **cannot** be used with the reconfigurable low credenza-to-worksurface support because the track obstructs mounting

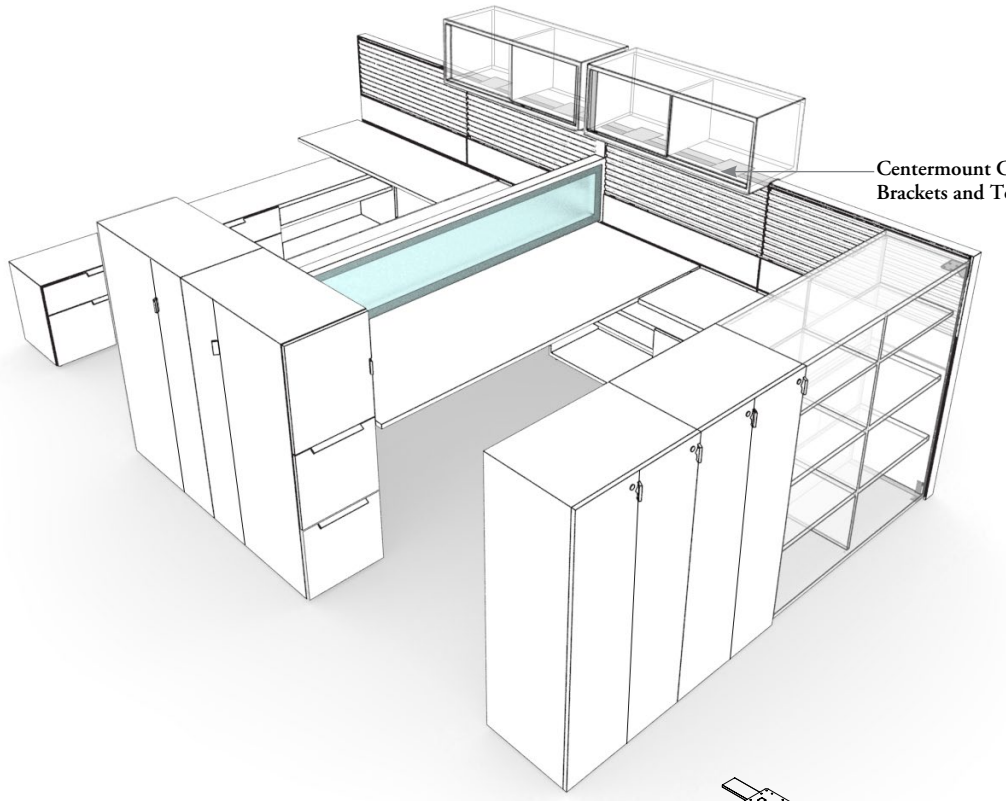

- When a high credenza or storage unit is mounted below a worksurface, it does not allow room for a Worksurface Panel Wall Bracket (UNBP) in the same location, therefore, in panel mounted applications (particularly when overhead storage is used) proper panel support is required
- The storage is attached to the underside of the worksurface, the worksurface is attached to the panel as closely as possible to the storage with the Worksurface Panel Wall Bracket (UNBP), and the storage is mounted to the panel with the Storage-to-Panel Bracket (UWSPB). If a return panel is used, the Storage-to-Panel Bracket (UWSPB) is not required, the return panel will support the spine. The storage needs to be attached to the worksurface only

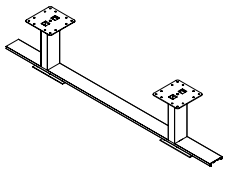

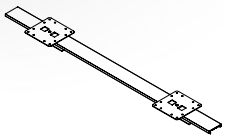

- High storage, mounted to the underside of a worksurface will obstruct the ability to flush plate a return worksurface to the primary worksurface
- In this application the Worksurface-to-Tower Bracket Kit (UWBT), must be used, to mount the return worksurface to the side of the storage, and then the storage is attached to the bottom of the primary worksurface

storage-to-panel support basics

The following outlines the features the supports that connect storage-to-panels.

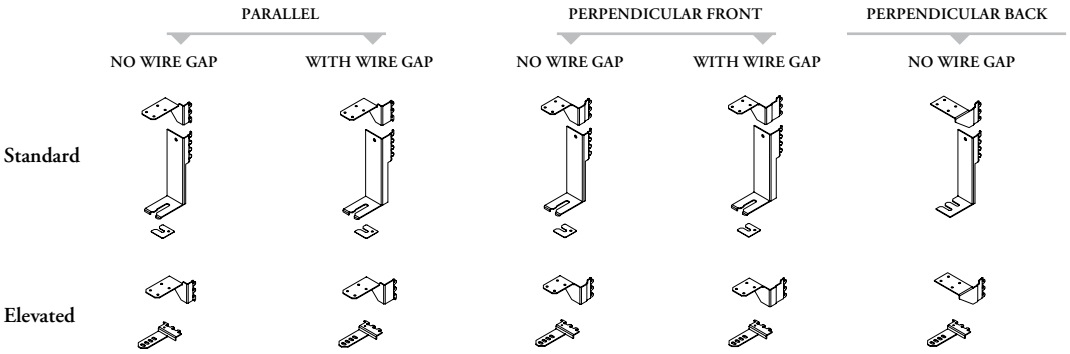

Centermount Cabinet Support Posts & Top Trim (UNOPT)

- Used to support upmount cabinets on-module
- Include the top trim and posts, so replaces a standard top trim
- Available 9" high or 13" high posts and 30"- 60" wide
- To maintain District datum heights it is recommended on a panel 42" high use a 9" post and a 15" cabinet for 66" high datum, and on a panel 29" high use 13" post and a 9" cabinet for a 51" high datum

Centermount Cabinet Support Brackets & Top Trim (UNOBT)

- Similar to Centermount Cabinet Support Posts & Top Trim (UNOPT) except that there are no posts
- Are available from 30" - 96" wide
- Cannot be used to attach a transaction counter

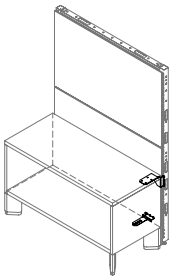

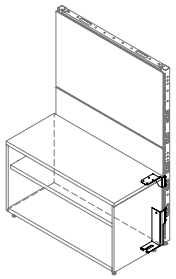

Storage-to-Panel Bracket (UWSPB)

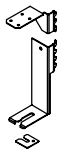

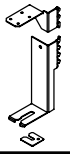

- Attaches to the back or side of a storage component and mounts into the vertical channel of a District panel, to provide support to a panel wall
- Options are available for parallel and perpendicular mounting at either the front or back of the cabinet, and for elevated and standard credenza heights
- Available with wire gap options
- Must be specified left or right handed, handedness being determined by the side of the panel to which storage is attached

selecting the correct storage-to-panel bracket

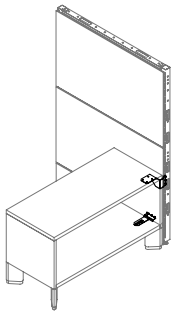

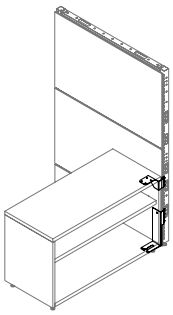

All storage units attach to panels with either parallel, perpendicular front or perpendicular back brackets. The following outlines each option, and which cabinets use each individual option.

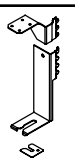

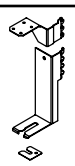

parallel mounting

<table>
<tr>
<td rowspan="4">
</td>
<td></td>
<td>• 3/8" offset (no gap)
Elevated Storage</td>
<td rowspan="4">• Used on storage with a closed back that fits flush or parallel to a panel wall
• Bracket will attach to the storage unit through the slot located on the back of the unit
• Available with 3/8" offset when no gap is required between the storage and panel wall, and 1" offset when a gap is required
• Available for elevated and standard storage heights
• Bracket fits into the vertical slots of the District panel wall
• Handedness is determined by the side of the panel when facing it onto which the storage is mounted

Parallel mounting is used on the following storage units:
UBKE, UBKS, UFLS, UKC, UKQ, UTLE, UTLS, UTCE, UTCS, UPFD, UPSE, UPSS, UKSD, UTDD, UTDK all credenzas. These products can be found in the District Storage Price & Application Guide.</td>
</tr>
<tr>
<td></td>
<td>• 1" offset (with gap)
Elevated Storage</td>
</tr>
<tr>
<td></td>
<td>• 3/8" offset (no gap)
Standard Storage</td>
</tr>
<tr>
<td></td>
<td>• 1" offset (with gap)
Standard Storage</td>
</tr>
</table>

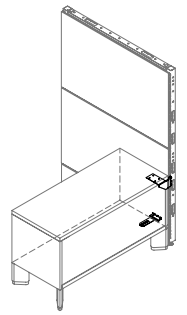

perpendicular mounting, front

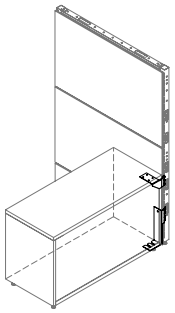

<table>
<tr>
<td rowspan="4">
</td>
<td></td>
<td>• 3/8" offset (no gap)
Elevated Storage</td>
<td rowspan="4">• Used when bracket is being attached to the inside of an open cubby space (not through a slot in the back). This mounting option is appropriate for units that have:
- open section (open credenzas, bookcases, etc),
- cubby back (single lockers, pedestals) and
- door in the mounting location (dual lockers etc)
• Available with 3/8" offset when no gap is required between the storage and panel wall, and 1" offset when a gap is required
• Available for elevated and standard storage heights
• Bracket fits into the vertical slots of the District panel wall
• Handedness is determined by the side of the panel when facing it onto which the storage is mounted

Perpendicular mounting, front is used on the following storage units:
UBKE, UBKS, UHHE, UHHS, UHOE, UHOS, ULHE, ULHS, ULOE, ULOS, UTCE, UTCS, UTDC, UTLE, UTLS. These products can be found in the District Storage Price & Application Guide.</td>
</tr>
<tr>
<td></td>
<td>• 1" offset (with gap)
Elevated Storage</td>
</tr>
<tr>
<td></td>
<td>• 3/8" offset (no gap)
Standard Storage</td>
</tr>
<tr>
<td></td>
<td>• 1" offset (with gap)
Standard Storage</td>
</tr>
</table>

selecting the correct storage-to-panel bracket (continued)

perpendicular mounting, back

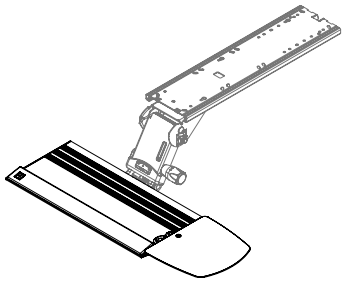

<table>
<tr>
<td></td>
<td></td>
<td>• 3/8" offset (no gap)
Elevated Storage</td>
<td rowspan="2">• Used on storage that sits perpendicular to the panel but attachment is through the back of the storage unit through the slots
• Available with 3/8" offset only (no gap)
• Available for flush and elevated configurations
• Bracket fits into the vertical slots of the Leverage panel
• Handedness is determined by the side of the panel when facing it onto which the storage is mounted

Perpendicular mounting, back is used on the following storage units:
UBKE, UBKS, UFLS, UKQ, UPSE, UPSS, UTCE, UTCS, UTLE, UTLS all credenzas. These products can be found in the District Storage Price & Application Guide.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• 3/8" offset (no gap)
Standard Storage</td>
</tr>
</table>

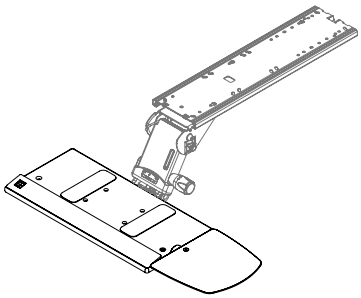

planning with keyboard trays

The following keyboard trays and components can be used on District worksurfaces with Reinforcement Channels.

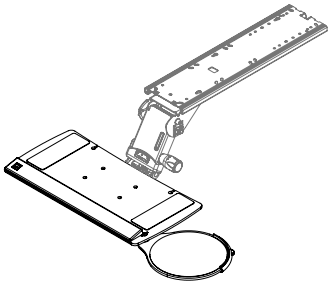

- When mounting a keyboard tray to worksurfaces where a support is located, certain conditions apply, consult Complements: *Teknion's Ergonomics & Accessories Program* for details and Application Matrices
- When the unsupported worksurface span is 48" or less, no reinforcement channels are required thus facilitating keyboard tray installation

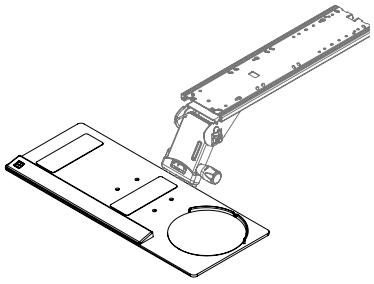

Tiers "T1" Aluminum Complete Keyboard Solution (YKT1)

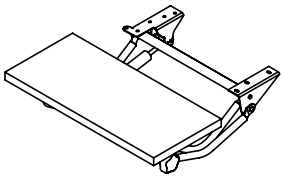

Tiers "T2" HDPE Complete Keyboard Solution (YKT2)

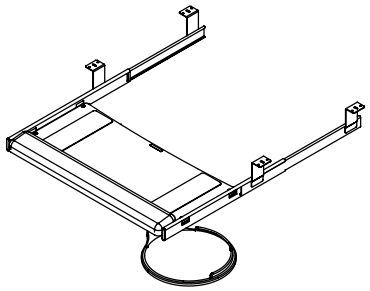

Tiers "T3" Small Phenolic Complete Keyboard Solution (YKT3)

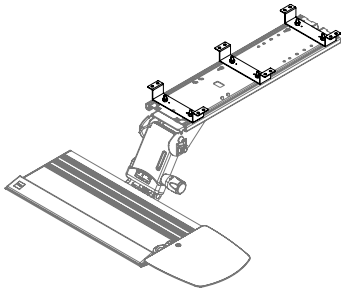

Tiers "T4" Large Phenolic Complete Keyboard Solution (YKT4)

Rectangular Keyboard Tray (YKKW)

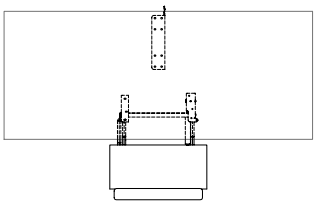

Retractable Keyboard Tray (YKRT)

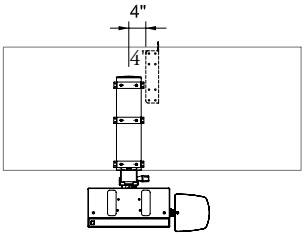

Accessories Offset Mount (YKMT-150)

planning with keyboard trays (continued)

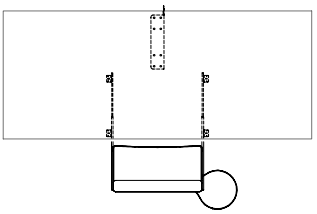

compatibility with cantilevers

Rectangular Keyboard Tray (YKKW)
Fits on worksurface depths 24", 30", 36" and must sit 4" from cantilever

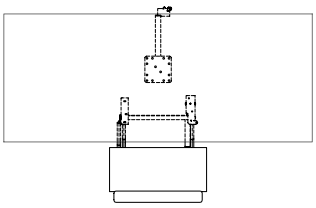

Accessories Offset Mount (YKMT-150)
Compatible with worksurface depths 24", 30", 36"

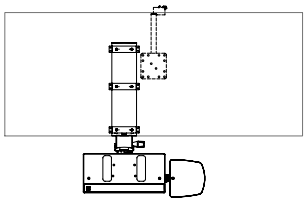

Retractable Keyboard Tray (YKRT)
Fits on worksurface depths 24" and 30"

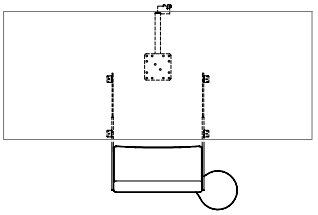

worksurfaces supported by a mid-gable

Rectangular Keyboard Tray (YKKW)
Compatible with all worksurface depths when the proper mid gable depth is specified

Accessories Offset Mount (YKMT-150)
- Fits on worksurface depths 30" and 36"
- Fits on 24" worksurface if keyboard tray handle does **not** interfere with half gable

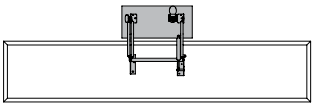

Retractable Keyboard Tray (YKRT)
Fits on worksurface depths 24", 30", 36"

planning with keyboard trays (continued)

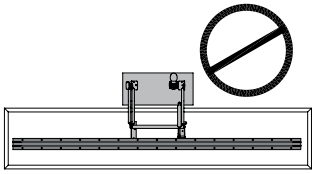

The following charts outline keyboard compatibility with reinforcement channels.

Keyboard Tray (YKKW) used on rectangular worksurfaces

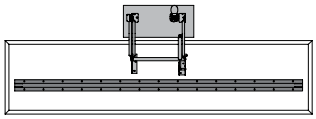

10.5" is required to the first reinforcement channel

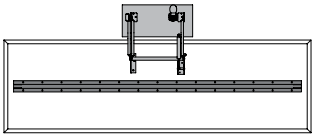

20" deep Rectangular Worksurface without Worksurface Reinforcement Channels

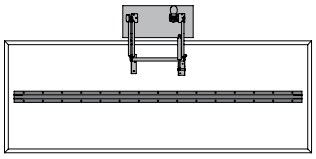

20" deep Rectangular Worksurface with Worksurface Reinforcement Channels

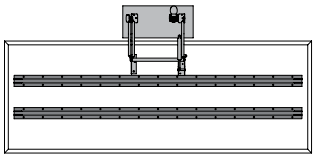

24" deep Rectangular Worksurface with one Worksurface Reinforcement Channel

30" deep Rectangular Worksurface with one Worksurface Reinforcement Channel

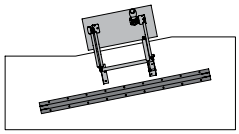

36" deep Rectangular Worksurface with one Reinforcement Channels

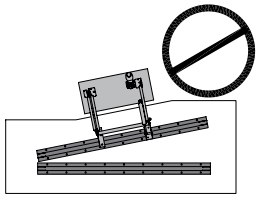

36" deep Rectangular Worksurface with two Reinforcement Channels

Keyboard Tray (YKKW) used on angled worksurfaces

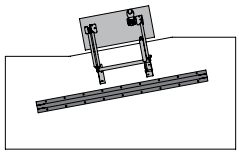

Can be used on Wedge, Extended Wedge and Wing Worksurfaces

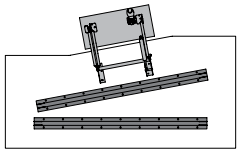

24" - 30" deep Transition Worksurface with one Worksurface Reinforcement Channel

24" - 30" deep Transition Worksurface with two Worksurface Reinforcement Channels – keyboard tray **cannot** be installed here

30" - 36" deep Transition Worksurface with one Worksurface Reinforcement Channel

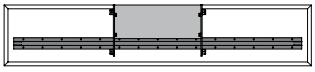

30" - 36" deep Transition Worksurface with two Worksurface Reinforcement Channels

planning with keyboard trays (continued)

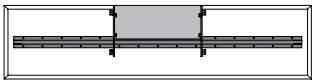

The following charts outline keyboard compatibility.

Keyboard Tray (YKRT) used on Rectangular Worksurfaces (UNWR)

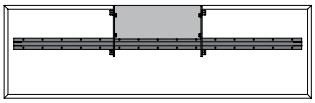

- Can be used with all worksurface depths regardless of the need for Worksurface Reinforcement Channels
- The brackets extend over the Worksurface Reinforcement Channels

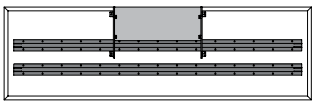

20" deep Rectangular Worksurface with one Worksurface Reinforcement Channel

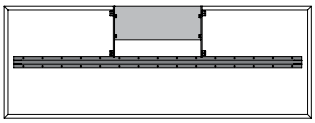

24" deep Rectangular Worksurface with one Worksurface Reinforcement Channel

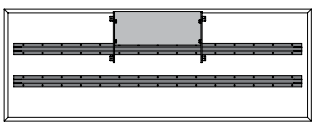

30" deep Rectangular Worksurface with one Worksurface Reinforcement Channel

30" deep Rectangular Worksurface with two Worksurface Reinforcement Channels

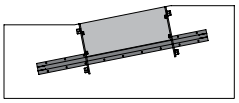

36" deep Rectangular Worksurface with one Worksurface Reinforcement Channel

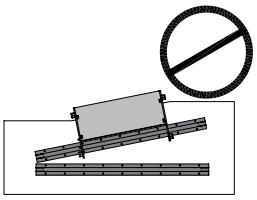

36" deep Rectangular Worksurface with two Worksurface Reinforcement Channels

Keyboard Tray (YKRT) used on Transition Worksurface (UNWT)

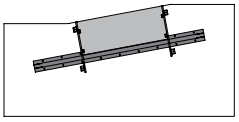

Can be used on Wedge, Extended Wedge and Wing Worksurfaces

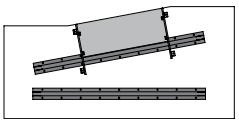

24" - 30" Deep Transition Worksurface with one Worksurface Reinforcement Channel

24" - 30" deep Transition Worksurface with two Worksurface Reinforcement Channels – keyboard tray **cannot** be installed here

30" - 36" deep Transition Worksurface with one Worksurface Reinforcement Channel

30" - 36" deep Transition Worksurface with two Worksurface Reinforcement Channels

understanding accessories

A variety of accessories are available to enhance the functionality to District workstations.

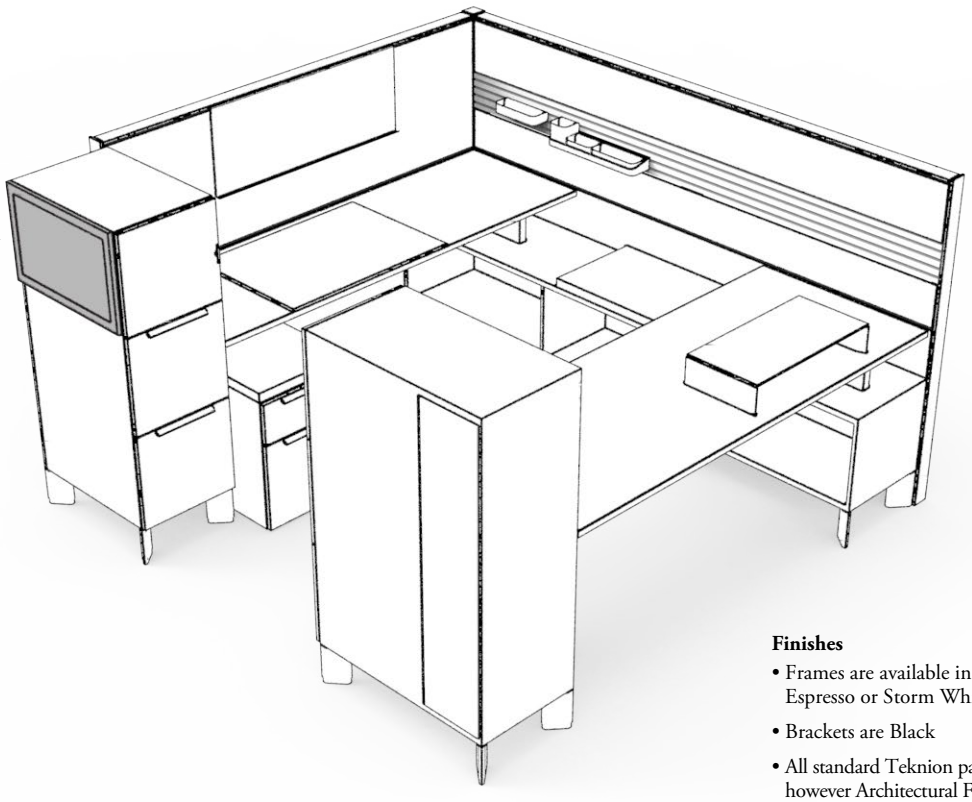

1. **Screen- and Panel-Mounted Tackboards** provide additional functionality to screens and panel walls.

   The **Tackboard** provides a framed tackable surface and the whiteboard provides an erasable writing surface.
2. **Tackable and Whiteboard Storage Fascias** are available for mounting to Standing Storage and Stacking Storage in heights that correspond with Elevated and Standard storage heights.
3. **Seat cushions** provide additional guest seating in a workstation and are available for low credenzas or rolling pedestals.
4. **Storage Infills** provide the ability to enclose and add functionality to open cubbies with options for solid whiteboard and tackboard depending on format.
5. Complements: *Teknion's Ergonomics & Accessories Program* offers additional accessories such as desk pads, binder dividers organizing trays for storing smaller items, and Podium

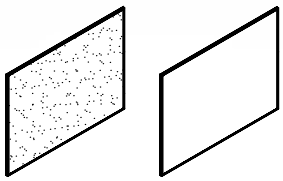

storage mounted fascia basics

The following mounted fascias are available for use with Standing and Stacking Storage and for screen and Panel Wall mounting.

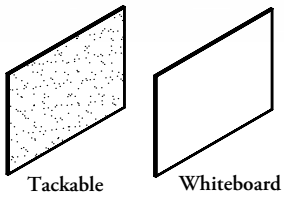

Finishes

- Frames are available in Clear Anodized and Espresso or Storm White paint finishes
- Brackets are Black
- All standard Teknion panel fabrics are available, however Architectural Fabrics are available on widths up to 48" only

Standing Storage Fascia (UNPSF)

- Mounts to storage units that are freestanding and **not** stacked onto other storage units
- Available in tackable and whiteboard finishes
- Can be mounted onto a single unit only, and **cannot** span across two units
- Available in heights from 12" to 60" in 1" increments and widths from 12" to 48" in 1" increments
- Whiteboard sizes are restricted to widths of 48"
- Can be mounted to the back or side of units
- Sizes are available to accommodate lockers with open cubbies at the back –the fascia will cover only the closed portion of the cabinet

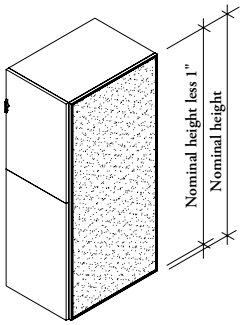

Stacking Storage Fascia (UNPSS)

- Mounts to storage units that are stacked onto a credenza or other base unit
- Available in tackable and whiteboard finishes
- Can be mounted onto a single unit only and **cannot** span across two units
- Available in heights from 15" to 45" in 1" increments and width from 24" to 96" in 6" increments
- Whiteboard sizes are restricted to widths of 48"

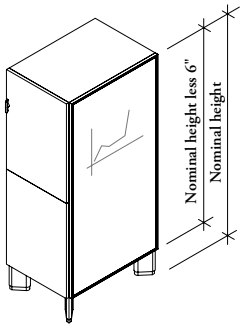

planning with storage mounted fascias

The following should be taken into consideration when planning with mounted fascias on standing and stacking storage.

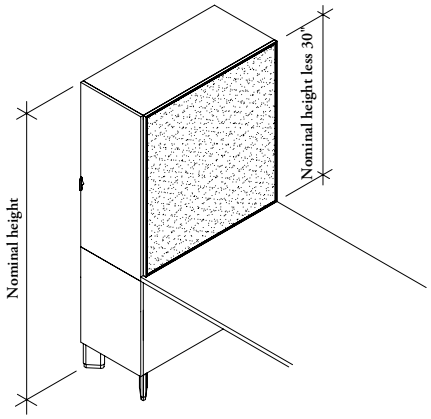

determining fascia sizes required for standing storage

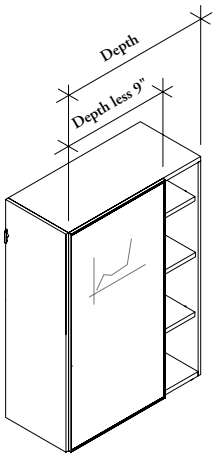

- For standard storage, the storage fascias must be ordered 1" shorter than the nominal height of the cabinet to allow for the gap at the base of all cabinets
- The width should match either the width or depth of the cabinet, depending on whether the fascia is being mounted to the back or side of the unit

- For elevated storage, the storage fascias must be ordered 6" shorter than the nominal height of the cabinet to allow for the ht. of the feet
- The width should match either the width or depth of the cabinet, depending on whether the fascia is being mounted to the back or side of the unit

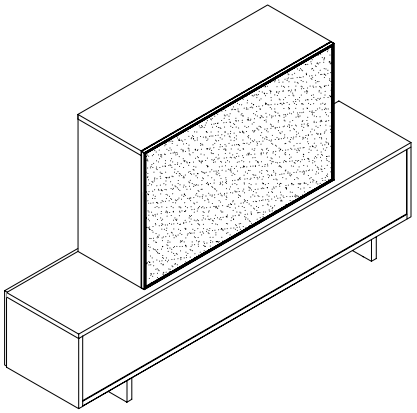

- For standard and elevated storage, where the storage fascia is required to be above the worksurface only, the tackable fascia must be ordered 30" shorter than the nominal height of the cabinet

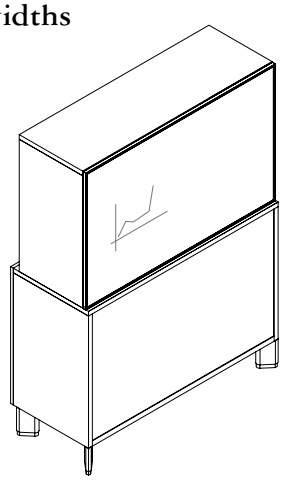

- For single lockers and pedestal towers with cubbies that are 29" and 35" deep and have an open section at the back, the storage fascia should be ordered 9" narrower than the overall depth of the cabinet

determining mounted fascias for stacking storage

- Mounted fascias for stacking storage are specified the same width and height as the stacking cabinet

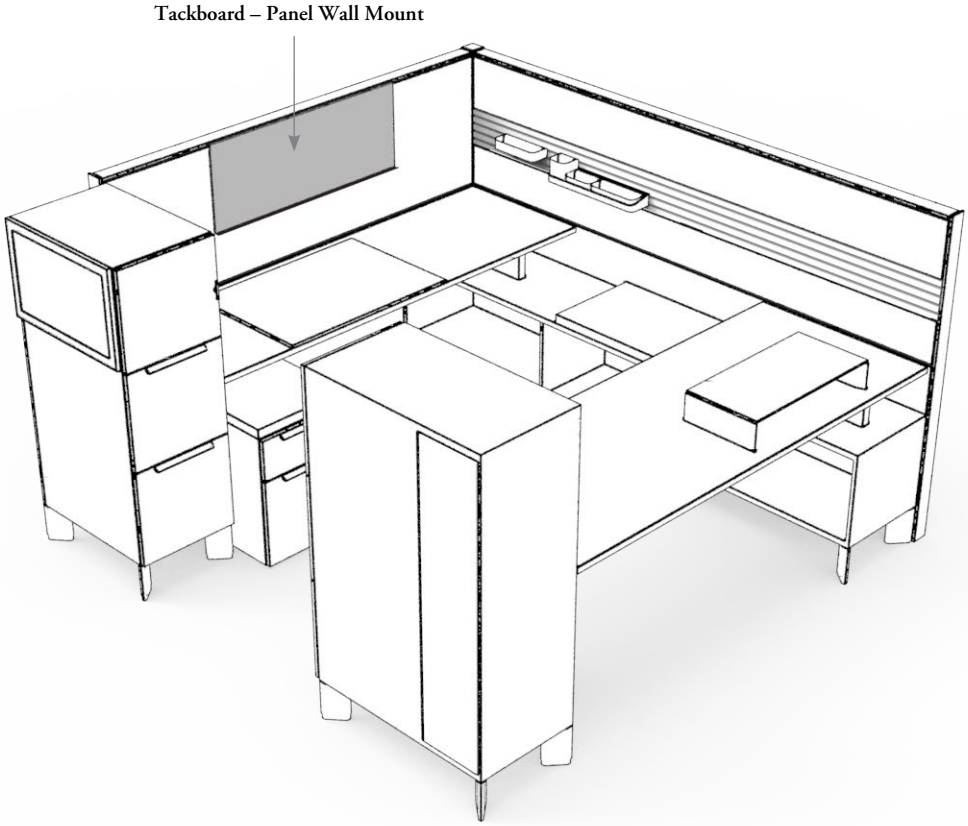

whiteboard widths

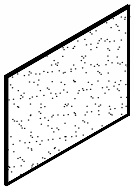

- Whiteboards widths are restricted to 48"

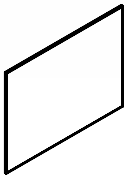

screen & panel mounted fascia basics

The following mounted fascias are available for use with Standing and Stacking Storage and for screen and Panel Wall mounting.

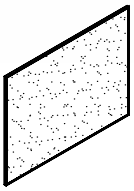

Tackboard

Whiteboard

Tackboard – Screen Mount (UNTBS) and Whiteboard – Screen Mount (UNTBW)

- Mounts to a floor desk-edge or storage screen
- Can be mounted on- or off-module and can be user relocated
- Covers the mounting rail of a floor screen, so mounting personal accessories **cannot** be used when the tackboard is used
- Available in heights of 13" and 22" to match above worksurface datum heights in
- Tackboards available in widths from 23"- 96" and the Whiteboard available from 23" - 48"
- Mounting brackets are available in the same finishes as the top rail on the floor screen
- Mounting brackets are available in the same finishes as the top rail on the floor screen

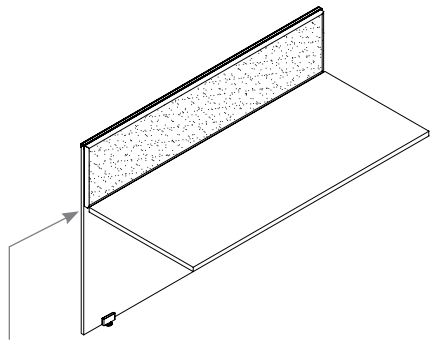

Tackboard – Panel Wall Mount (UNTBP)

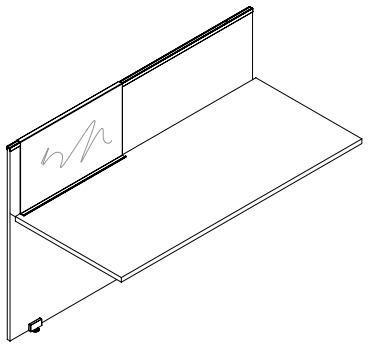

- Mounts to the top rail of a panel wall to provide a panel-mounted tackboard
- Can be mounted anywhere along the panel wall and can be user relocated
- Available in heights of 13", 22" and 37" to match above worksurface datum heights and in widths from 23" to 96" in 1" increments

planning with screen-mounted & panel-mounted fascias

The following should be taken into consideration when planning with tackboards, screen mounted.

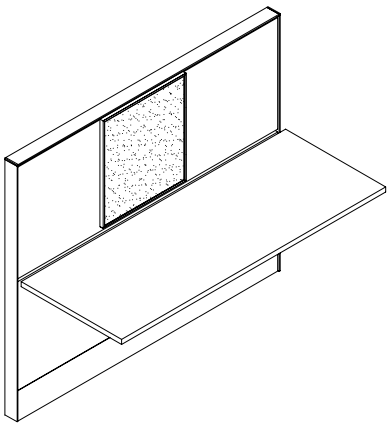

screen mount tackboard and whiteboard

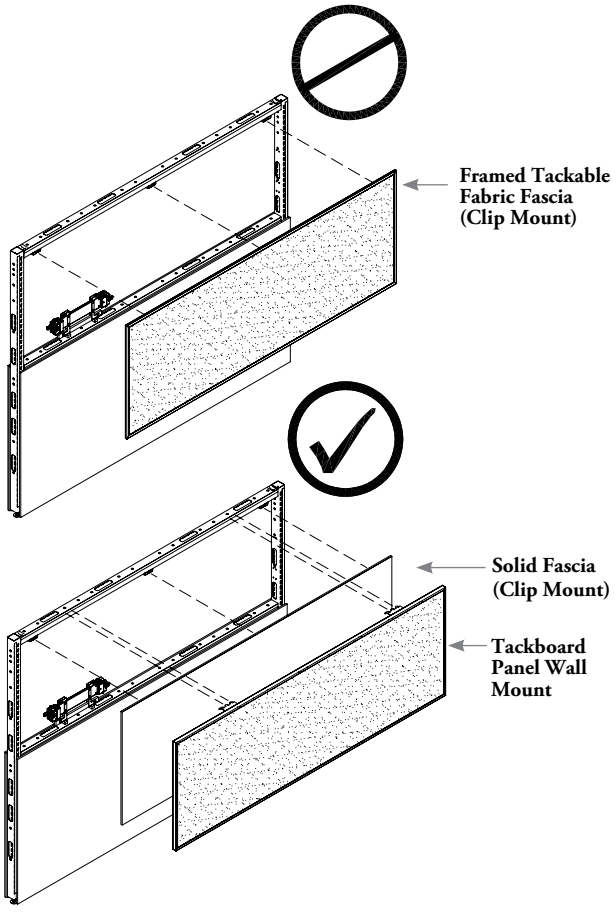

- Can be mounted on Floor Screens and Storage Screens
- Actual height will be 1" less than nominal height to allow clearance for cable management
- Nominal widths = actual widths, the tackboard will match that actual width of the screen
- **Cannot** be used with Casual Lateral Screens

panel-mounted tackboard

- The panel wall mounted tackboard is an ideal solution when planning with "D-Style" hard surface fascias and only a small area of tackboard is required
- The tackboard mounts onto the face of a hard surface fascia and can be any width, allowing for on- or off-module planning

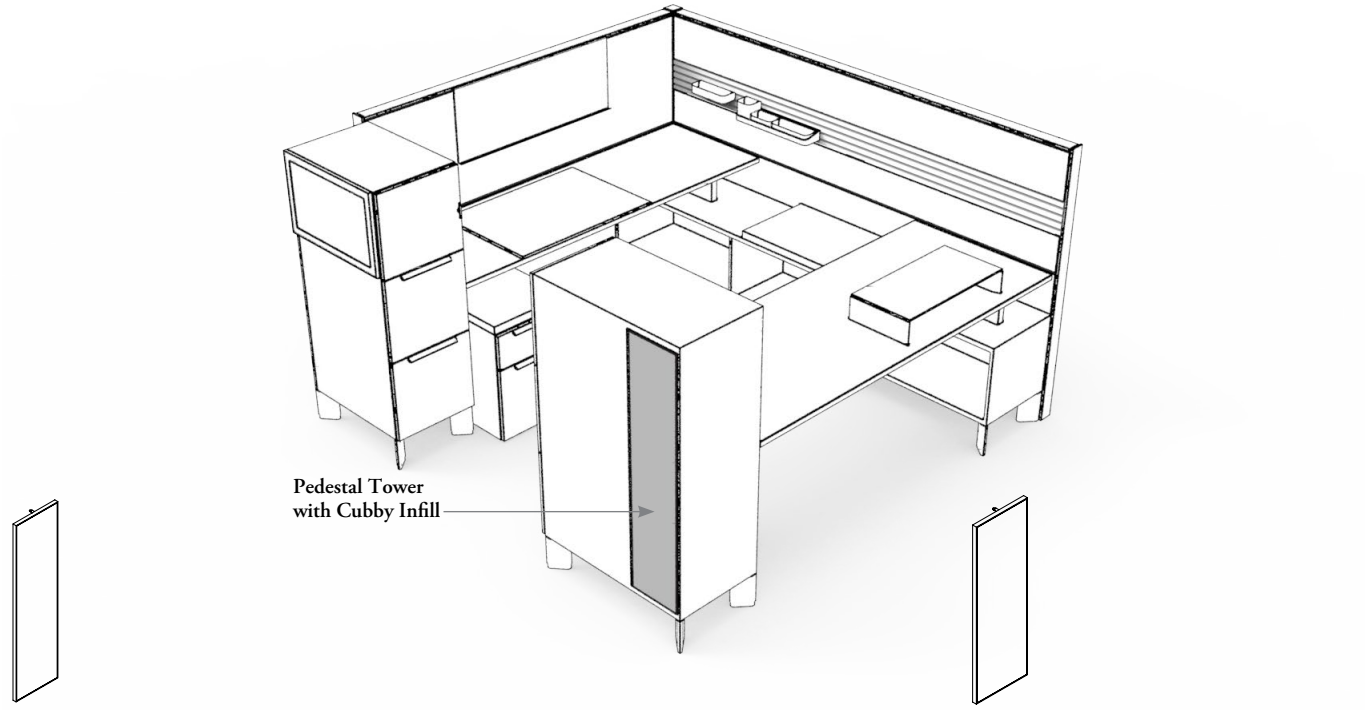

- Tackboard panel wall mount is ideal for use when a framed tackboard is required on the back side of a single-sided power application (a standard framed tackable fascia will **not** fit in this application, see Fascia section). The framed tackboard can mount onto a solid fascia, and maintain similar aesthetic to adjoining workstations

tower & locker infill basics

Infills are used with towers and lockers to convert open formats to fully enclosed and secure cabinets. The following outlines the features of each type.

lateral tower, combo tower, pedestal tower with cubby and single locker infills

- Mount into either Elevated or Standard height cabinets
- Available in heights of 36", 42", 51" and 66"
- Height and width is determined by the size of the cabinet, **not** the size of the opening into which is it mounting
- Solid finishes are available in Source Laminate, Flintwood and Natural Veneer

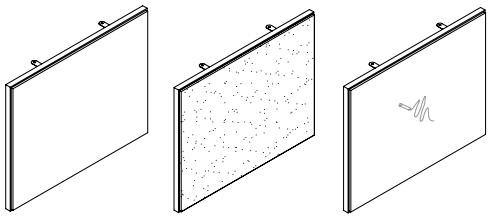

Single Locker with Cubby Infill (UKSCIS)

- A solid finish on the inside and outside to provide a closed back

Pedestal Tower with Cubby Infill (UTDCIS)

- A solid finish on the inside and outside to provide a closed back

Combo Tower Infill (UTCXIS)
Cannot be used on Combo Tower with Source Laminate Case

Source Laminate Combo Tower Infill (UTCXIX)
Can only be used on Combo Tower with Source Laminate Case

Solid Outside

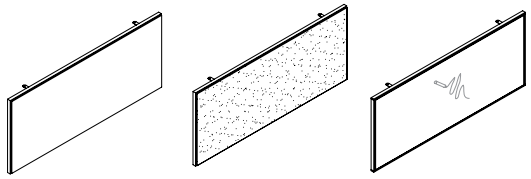

- A solid finish on the inside and outside to provide a closed back

Fabric Outside

- Provides a fabric tackboard on the outside of the cabinet; inside is a painted finish

Whiteboard Outside

- Provides a whiteboard on the outside of the cabinet; inside is a painted finish

Lateral Tower Infill (UTLXIS)

- There is no 35" high elevated option

Solid Outside

- A solid finish on the inside and outside to provide a closed back

Fabric Outside

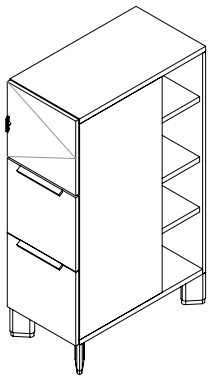

- Provides a fabric tackboard on the outside of the cabinet; inside is a solid finish

Whiteboard Outside

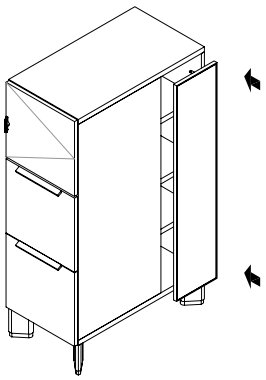

- Provides a whiteboard on the outside of the cabinet; inside is a solid finish

planning with tower & locker infills

The following should be considered when planning with infills

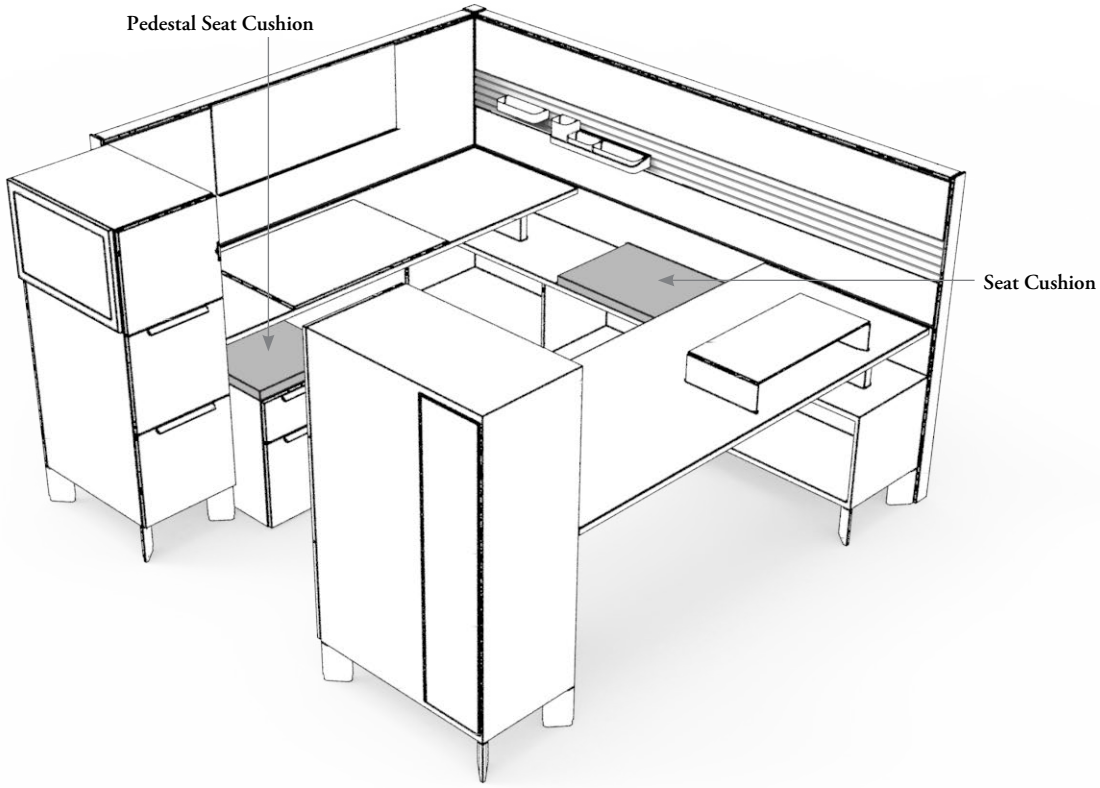

- All towers and lockers that accommodate infills are handed; handedness being determined by the hinge location of the storage section
- The cubby shelf is inset on the same side to accommodate the infill
- On 36" high cabinets with no storage section, the unit is still considered handed because of the shelf inset

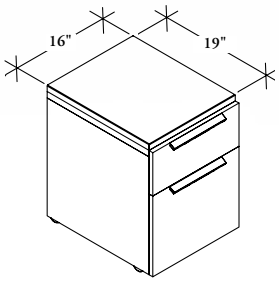

- When specifying the infills the size is determined by the actual size of the cabinet it is being used on, **not** the size of the opening

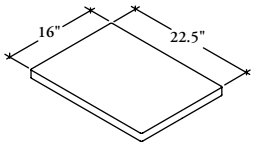

seat cushion basics

The following options are available for District seat cushions.

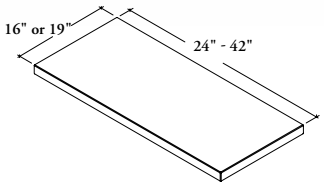

Pedestal

Credenza

Credenza

Seat Cushion (UWLC)

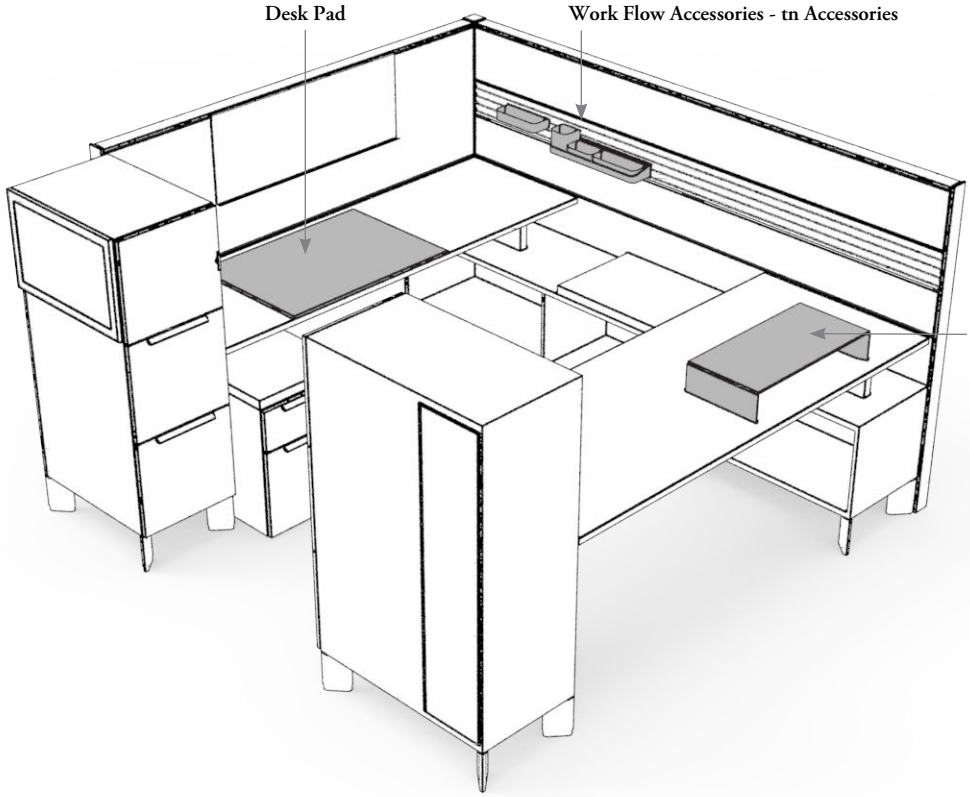

- Provides space saving casual guest seating in a workstation
- Available in two options:
  - C - used on low credenzas (placed upon but **not** affixed)
  - R - mounted onto rolling pedestals only
- Can be specified on the Rolling Pedestal (UPR) at the time of order, or can be ordered separately and retrofitted onto an existing Rolling Pedestal. For more information, see *District Storage Price & Application Guide*.
- The credenza option is sized to be used on 16" and 19" deep credenzas
- Available in all of Teknion's standard Seating fabrics

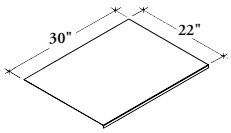

Fitted Seat Cushion (UWLF)

- Sized to fit precisely onto credenza tops
- Match depths of credenzas and the widths match drawer widths of credenzas
- Available in all Teknion standard seating fabrics except leather

complements accessory basics

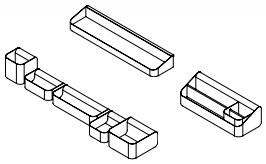

Complements: *Teknion's Ergonomics & Accessories Program*, **offers a number of accessories that are designed for use with District.**

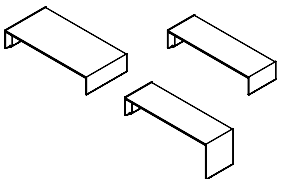

Desk Pad (YPDP)

- Lays onto any thickness of worksurface with a flat or knife edge style without tools
- Can span the corner between two worksurfaces to create a conventional angled computer corner
- Includes an integral cable management retainer for easy laptop plug in

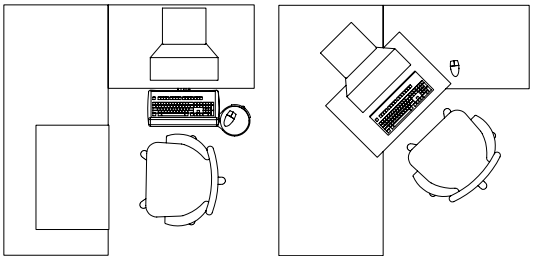

tn Accessories

- A series of Desktop and Freestanding Storage items that complement any workspace

Podium

- A collection of shelves and accessories to organize laptops, flat screen monitors, and multiple hand-held electronic peripherals

- The desk pad is typically used on the primary worksurface, however it can also span across the corner of two worksurfaces to create a conventional angled computer corner – the steel inner construction provides the stability required to support a keyboard tray – **cannot** be used if the two surfaces are at different heights

PLANNING WITH POWER CONSERVATION SYSTEM 274

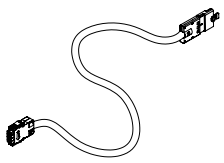

electrics & communications overview

District offers a non-directional wiring system that allows for maximum flexibility and simple reconfiguration.

Power must be turned off during all installations and reconfigurations.

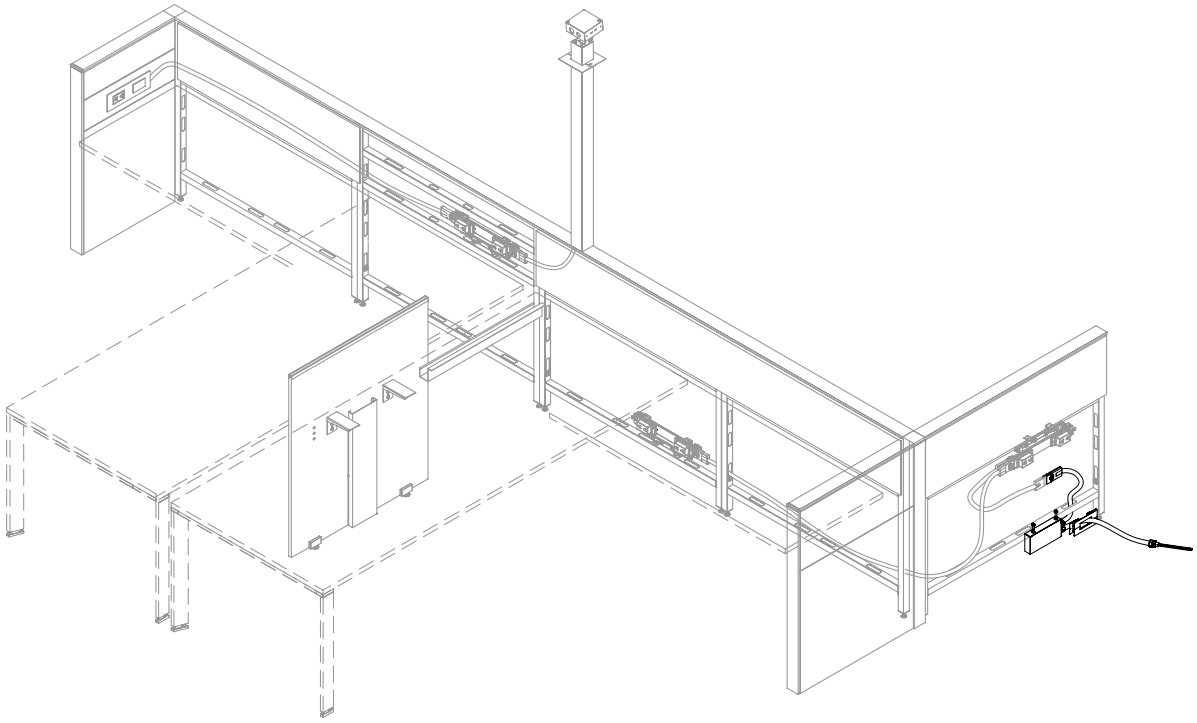

1. Power is provided to workstations by either a power pole or through a base feed.
2. Power boxes can be mounted above or below worksurface height.
3. When panels are **not** available for routing cables, casual wire management is available.
4. Power is distributed by harnesses connected by power boxes – the power box can accommodate up to four outlets, two on either side of the box, and the power can run in either direction from the box.
5. Power is provided to workstations by either a power pole or through a base feed.

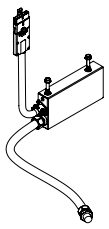

- A compatibility harness is available to connect the new style of power with the previous version of District electrics

power entry basics – panel-mounted workstations

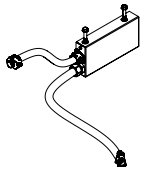

Power and communications cables enter a workstation either through a base feed or a ceiling feed. The options are detailed below. The following outlines the features of the electrical and communication components available for use in District panel environments.

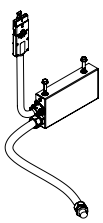

Base Feed (UNQBFR)

- A hard wired connection that supplies power into a panel from the building power source
- Both base feeds and harnesses can be used in the same panel
- Available in 8T, 7T, 8K and 7K wiring options to allow for most common Teknion wiring configurations
- Available in options for mounting into either solid fascias or metal or fabric fascias
- Available in a PVC free option
- If a base feed kit is mounted onto an elevated panel, it will be below the rail, therefore will be exposed.

Chicago Base Feed (UNQBFRCH)

- Provides the conduit only for Chicago electrics wiring restrictions that require that all wiring and connections be supplied and connected by a licensed electrician
- Supplied with three wires for a single circuit only
- Available 72" long only
- Box painted Platinum

Split Base Feed (UNQBFSR)

- Same as the base feed except that it is hard wired to the building power supply in two places for New York City wiring restrictions
- Accommodates hard wiring within the floor monument and in the wiring junction box
- Box painted Platinum

(UNQEP)

(UNQEPR)

Power Pole (UNQEP) and End of Run Power Pole (UNQEPR)

- Used to house the ceiling feed and includes a pole divider for separating the ceiling power feed from the communications and data cables
- Available in 48", 72" and 96" heights for up to 10' ceilings
- Available in options for corner mounting and off-module mounting
- End of Run Power Pole (UNQEPR) **cannot** be installed off-module or on a corner

Ceiling Feed (UNQCFR)

- Routes power into the panel from the ceiling through the power pole
- Includes a junction box to connect to the building power supply at the ceiling
- Also connects to a power harness
- Available in 8T, 7T, 8K and 7K wiring options to allow for most common Teknion wiring configurations
- Length of the feed represents the length of the harness encased in flexible conduit – an additional 6" of cable is provided for connection the ceiling junction box

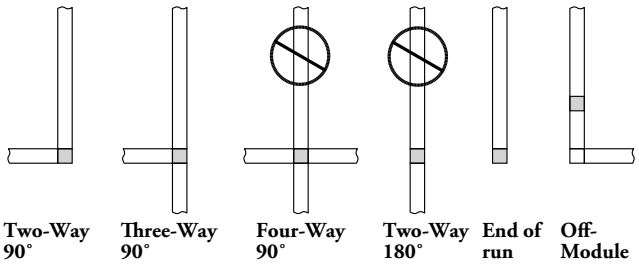

Chicago Ceiling Feed (UNQCFRCH)

- Same as ceiling feed except that there is no connector on the bottom end due to Chicago electrics wiring restrictions
- Supplied with three wires for a single circuit only

planning with power poles

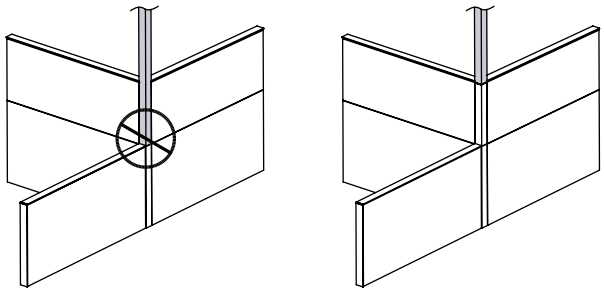

The following should be considered when planning with the Ceiling Feed Harness, Power Pole, End of Run Power Pole and Off-Module Power Pole

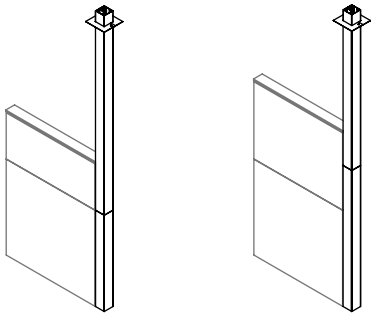

- The Power Pole can be located at Two and Three-Way 90° corners and at end of run and off-module locations

Power Poles located at corners:

- Always terminates at the top of a corner assembly
- Connectors are specified to the highest height, and then the Power Pole is installed
- **Cannot** extend below highest panel

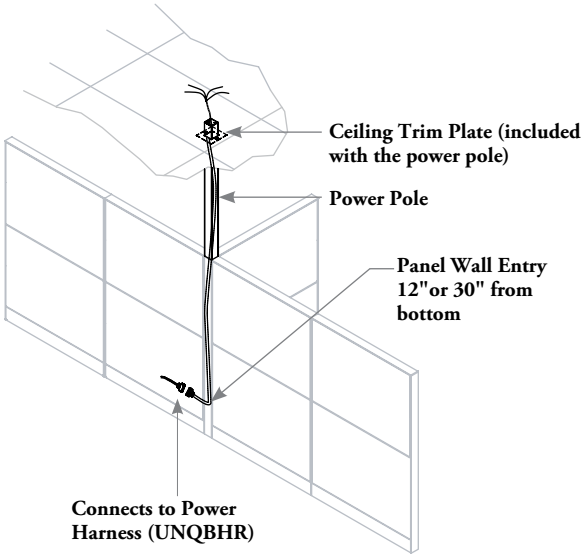

- Available in 48", 72" and 96" heights, and can be cut on site to required height
- Required height is the distance between finished ceiling height and top of the panel plus 4"
- Ceiling harness (120") is compatible for ceilings up to 10'
- Removable cover on one side gives access to the inside of the pole

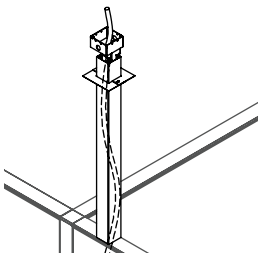

end of run power pole

- Is typically used when no corner location is available for the Power Pole
- Available in two heights. 29" high for 29" high Panel Walls or where only below worksurface panel entry for Power Harness is required and 42" high for Panel Walls 42" or higher, entry for Power Harness can be either above or below the worksurface
- An additional Power Pole to ceiling height must be specified above that

ceiling feed

- Available hardwired for building connection
- The other end of the harness is a female connection
- A power harness is required to route ceiling harness to a power box
- Chicago version must connect to a distribution box

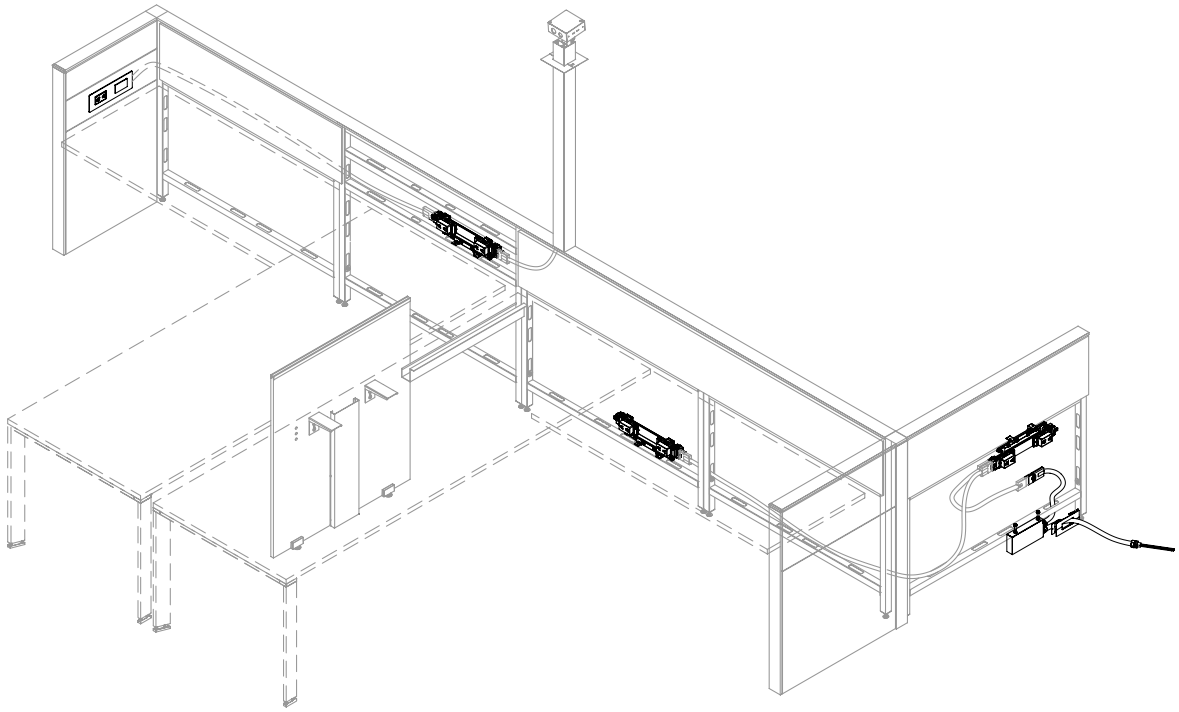

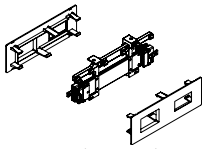

off-module power pole

- The Off-Module Power Pole Top Trim (UNTTP) is complete with a cutout to accommodate the Power Pole (ordered separately) at 9" from any Panel Wall End

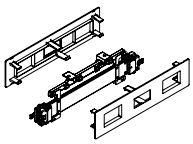

power & communications basics – panel-mounted workstations

Power can be accessed at various heights within a panel wall through the use of power boxes and receptacles.

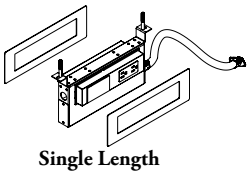

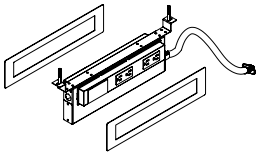

Single Length

Double Length

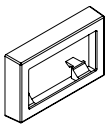

Single Length

Double Length

Power Box (UNQPR)

- A module for mounting receptacles (specified separately)
- Mounts to the panel frame below or above panel wall rails but does **not** clip to light block rails
- Available in single (S) or double (D) lengths – the 24" and 30" wide panels can only accommodate the single box
- Single length power box is 12" long and includes a bezel with one receptacle and one data opening
- Double length power box is 16" long and includes a bezel with two receptacle and one data opening
- Either a one-sided or back-to-back application must be specified (even though it is the same box), so that the proper amount of bezels will be included
- Available in a PVC free option

Data Extender Plate (UNQDE)

- The Data Extender Plate is placed over a communication opening to provide extended depth for data jacks which may be required in some applications. Consult your data cabling supplier for clearance requirements

Chicago Power Box (UNQPRCH)

- Same as the power box except for Chicago electrics applications
- Includes the outlets and faceplates, but does **not** include any connectors – electrical connections must be done on site by a certified electrician
- Must be specified single or double length, and one-sided or back-to-back
- When placing the Power Box at the Base (Bottom Level 1), the "U" Above Worksurface Height (Upper Fascia) mounting location should be used

Receptacle Outlet (UNQRO)

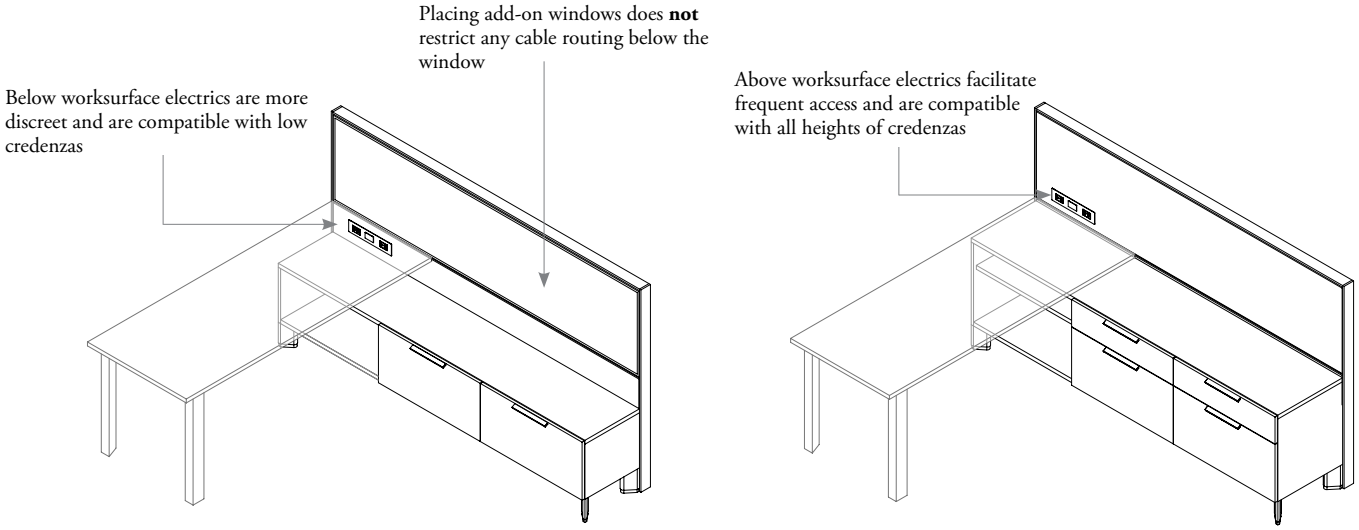

- A single duplex receptacle that slides onto the power box module to provide power
- Specified individually for maximum circuit flexibility
- Styles include Standard 15 amp, T-Slot 20 amp, Controlled 15 and 20 amp
- Outlet configurations consist of Circuit 1, Circuit 2, Circuit 3 (use 8T only), Circuit 5 (8T and 8K only), Circuit 6 (use 8K only), Circuit A (7T and 7K only) and Circuit B (7K only)

planning with power boxes & outlets

The following should be considered when planning with District power boxes and outlets.

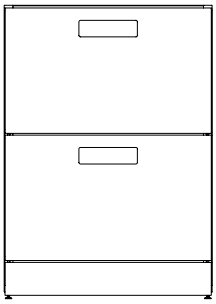

- Panel data capacity: minimum 24 cat. 5 cables at 60% fill
- Power Pole capacity: minimum 24 cat. 5 cables at 60% fill
- Frame openings for vertical routing are present on all panel frames. Each frame opening can accommodate a minimum of two harnesses

above and below worksurface power

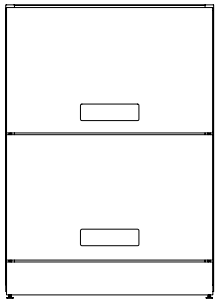

power cut out locations

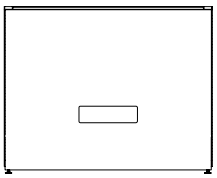

- Power boxes can be placed at the top or bottom of a fascia with electrical cut outs depending on the height of the fascia

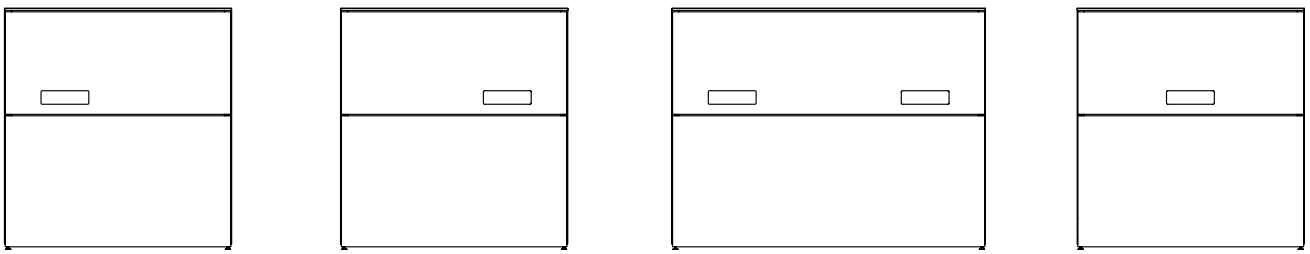

- Top cut outs are available in 13", 22" and 28" high fascias

- Bottom cut outs are available in 7", 13", 22" and 37" high fascias

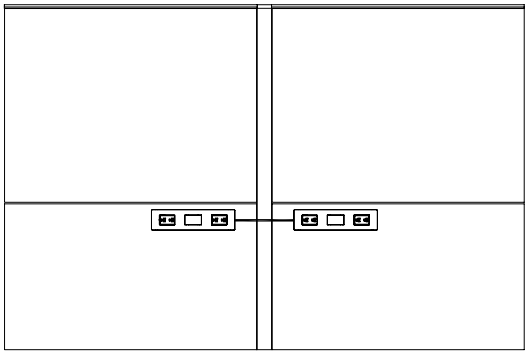

- Flush cut outs are available 28" high for use only on the base of the panel, and will be at the bottom

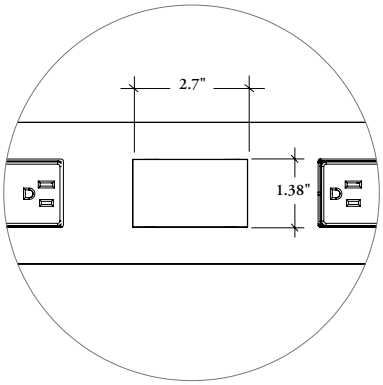

- Cut outs are available left, right or centered depending on panel width (See Fascia section)

planning with power boxes & outlets (continued)

data access

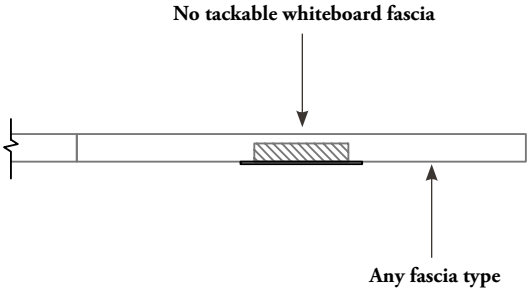

- Data access is in the center of the module and symmetrical on both sides of the panel

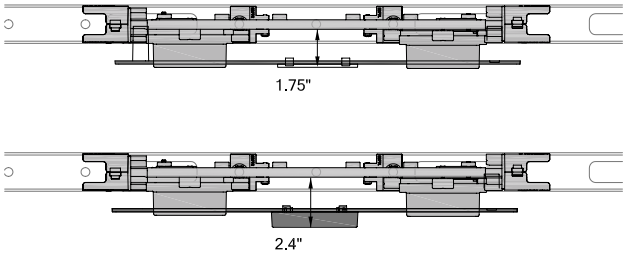

- Data access is provided in the cut outs on power/communications fascias, and on the faceplates included with power boxes
- Cut Outs will accommodate most standard communication faceplates
- The depth available for data jacks is 1.35" when using data faceplates

single-sided power

- When single-sided electrics are used, the fascia on the back side **cannot** be a D-Style fascia with a frame and clips except for the solid fascia; a slot-mounted fascia must be used to allow sufficient space for the power box

- The depth can be increased to 2" by using the Data Extender Plate (UNQED)

wiring systems

Four wiring systems are available for Interpret 8-Wire Isolated (8T), 7-Wire Non Isolated (7T), 8-Wire Dual Isolated (8K) and 7-Wire Dual Non Isolated (7K). Most common Teknion wiring configurations are achieved with these wiring systems.

For sites where Isolated Ground is not available, Teknion offers Non-Isolated Ground options for furniture wiring. The site electrician or electrical contractor/ consultant can identify sites where Isolated Ground is not available. For those sites, specify Teknion 7T or 7K wiring systems.

	No. Regular Circuits	No. Isolated Circuits
8-Wire Isolated (8T) (3+1) Neutral (White) Circuit 1 (Black) Circuit 2 (Red) Circuit 3 (Blue) Ground (Green) Isolated Circuit 5 (Orange) Isolated Neutral (White/Orange) Isolated Ground (Green/Orange)	3	1
8-Wire Dual Isolated (8K) (2+2) Neutral (White) Circuit 1 (Black) Circuit 2 (Red) Ground (Green) Isolated Circuit 5 (Orange) Isolated Circuit 6 (Blue) Isolated Neutral (White/Orange) Isolated Ground (Green/Orange)	2	2
7-Wire Non Isolated (7T) (3+1) Neutral (White) Circuit 1 (Black) Circuit 2 (Red) Circuit 3 (Blue) Ground (Green) Neutral (White/Orange) Circuit A (Orange)	4	0
7-Wire Dual Non Isolated (7K) (2+2) Neutral (White) Circuit 1 (Black) Circuit 2 (Red) Isolated Neutral (White/Orange) Circuit A (Orange) Circuit B (Blue) Ground (Green)	4	0

wiring system/receptacles

	Wiring System			
	8T	**8K**	**7T**	**7K**
Regular Ground Receptacles	1, 2, 3	1, 2	1, 2	1, 2, A, B
Isolated Ground Receptacles	5	5, 6	n/a	n/a

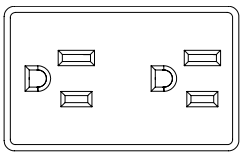

- All receptacles except Circuit 6 can be used with the 8T wiring system (**cannot** accept a 2nd Isolated Circuit)
- All receptacles except Circuit 3 can be used with the 8K wiring system (**cannot** accept a 3rd Regular Circuit)
- Circuit A is compatible with 7T and 7K. Circuit B is compatible with 7K only

wiring system/related circuit

	Wiring System			
	8T	**8K**	**7T**	**7K**
Regular Circuit 1 Receptacle	✔	✔	✔	✔
Regular Circuit 2 Receptacle	✔	✔	✔	✔
Regular Circuit 3 Receptacle	✔			
Isolated Circuit 5 IG Receptacle	✔	✔		
Isolated Circuit 6 IG Receptacle		✔		
Regular Circuit A Receptacle			✔	✔
Regular Circuit B Receptacle				✔

✔ **Applicable**

15 Amp

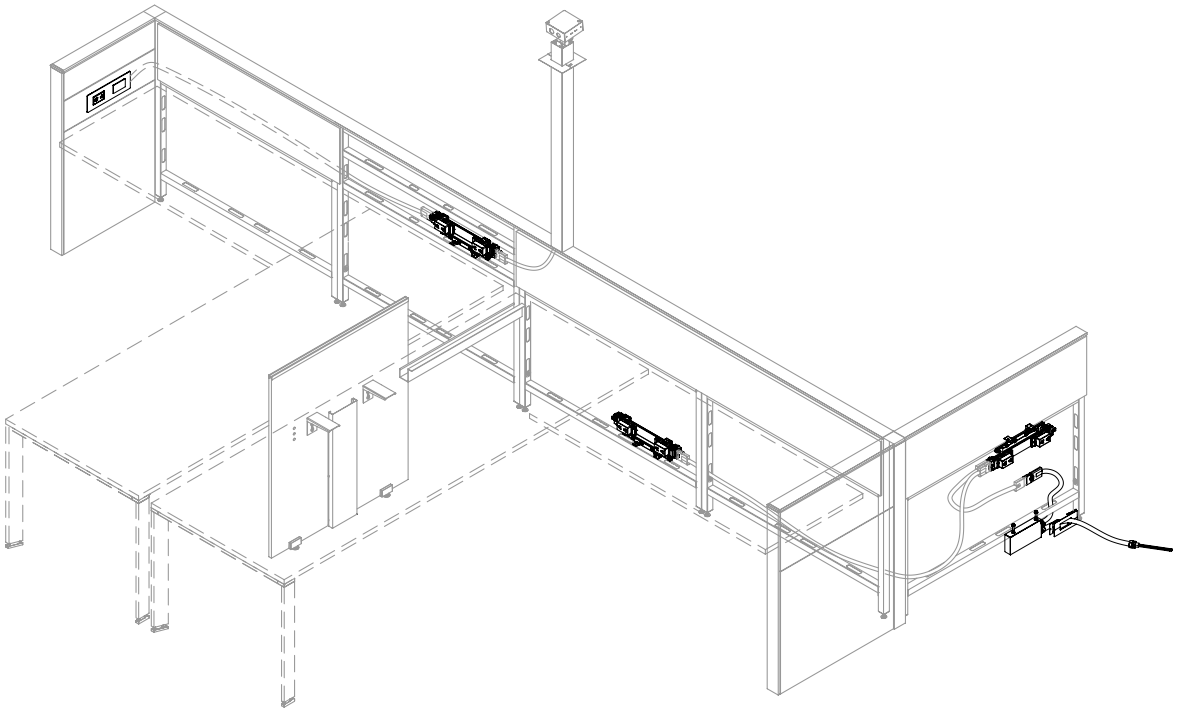

20 Amp

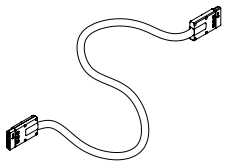

- Outlets are available 15, 20 amp
- The 20 Amp is only available in Black
- Outlets are available with marking indicating it is connected to a control system in both 15 and 20 amp options.

power distribution basics – panel-mounted workstations

Power is routed through panel walls with harnesses. The options are listed below.

Power Harness (UNQBHR)

- Routes power from one power box to another and is non directional
- Also connects to base feeds and ceiling feeds
- Available in various lengths from 9" to 144" and can be used within any panel
- 9", 12" and 24" conduit is mesh, providing a greater bend radius, and all conduits are oval to be able to pass between panels
- Available in a PVC free option

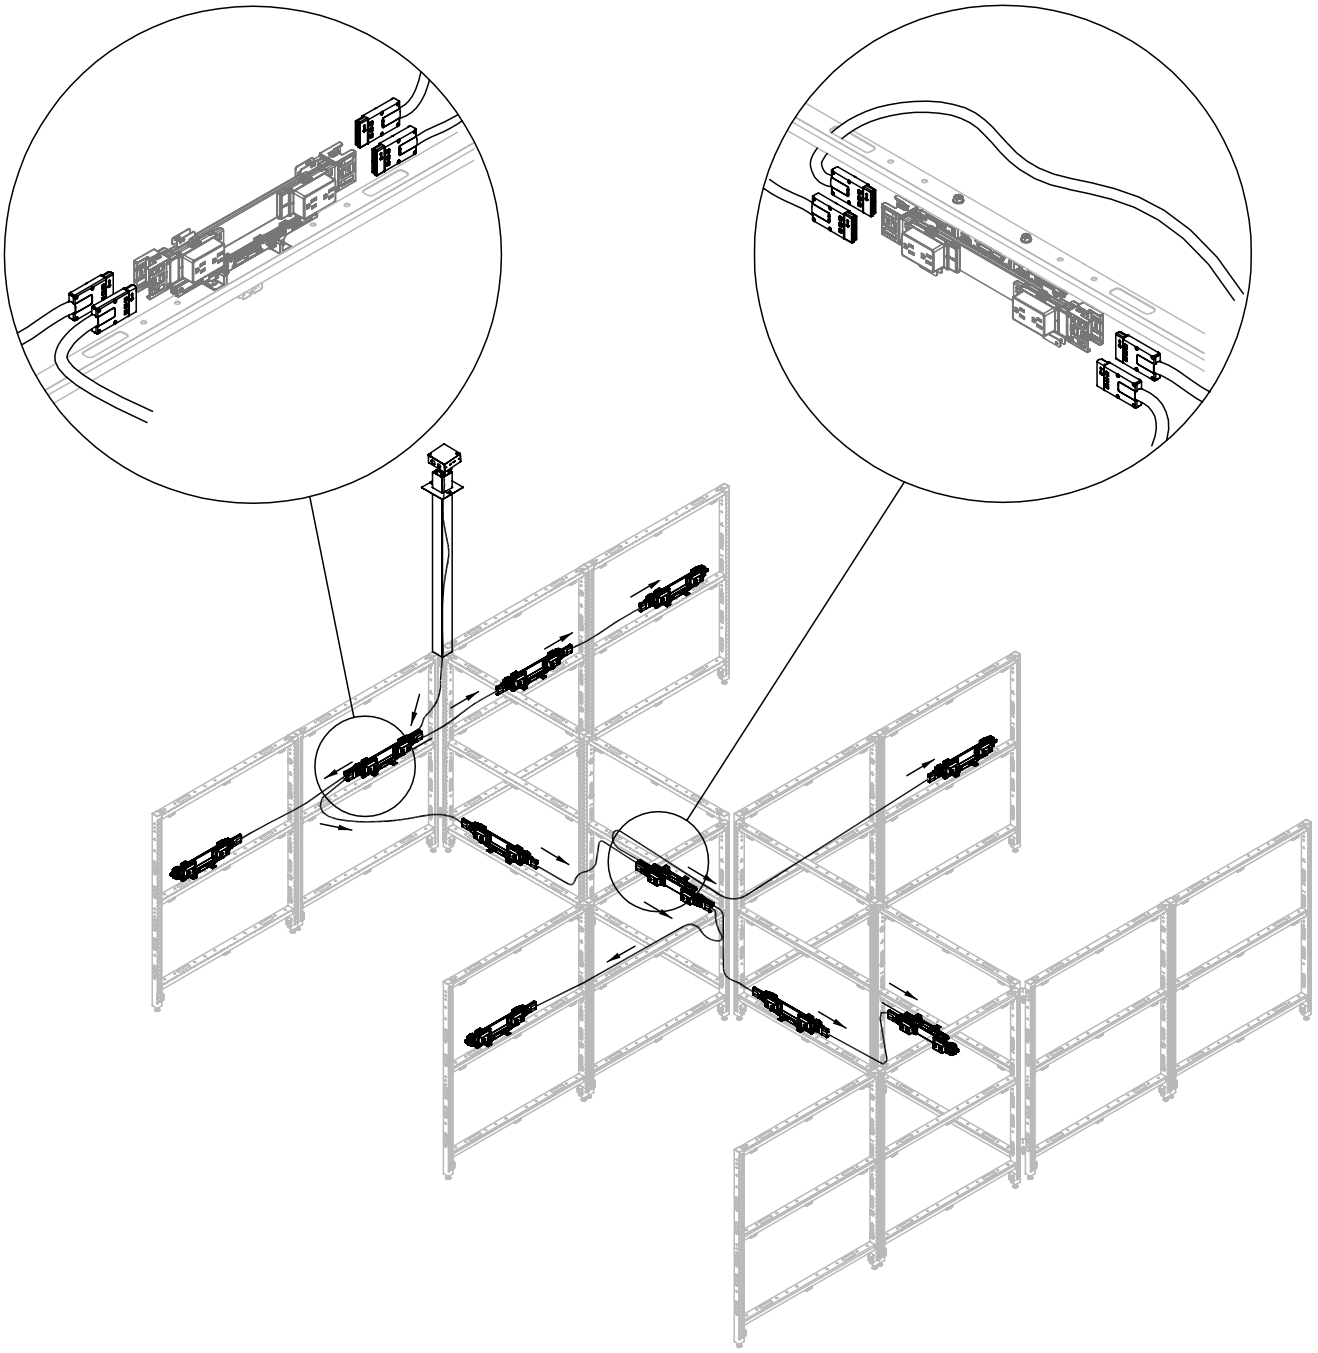

I-Connector (EWIC)

- Used to join two harnesses when a single harness length is **not** long enough

planning with harnesses

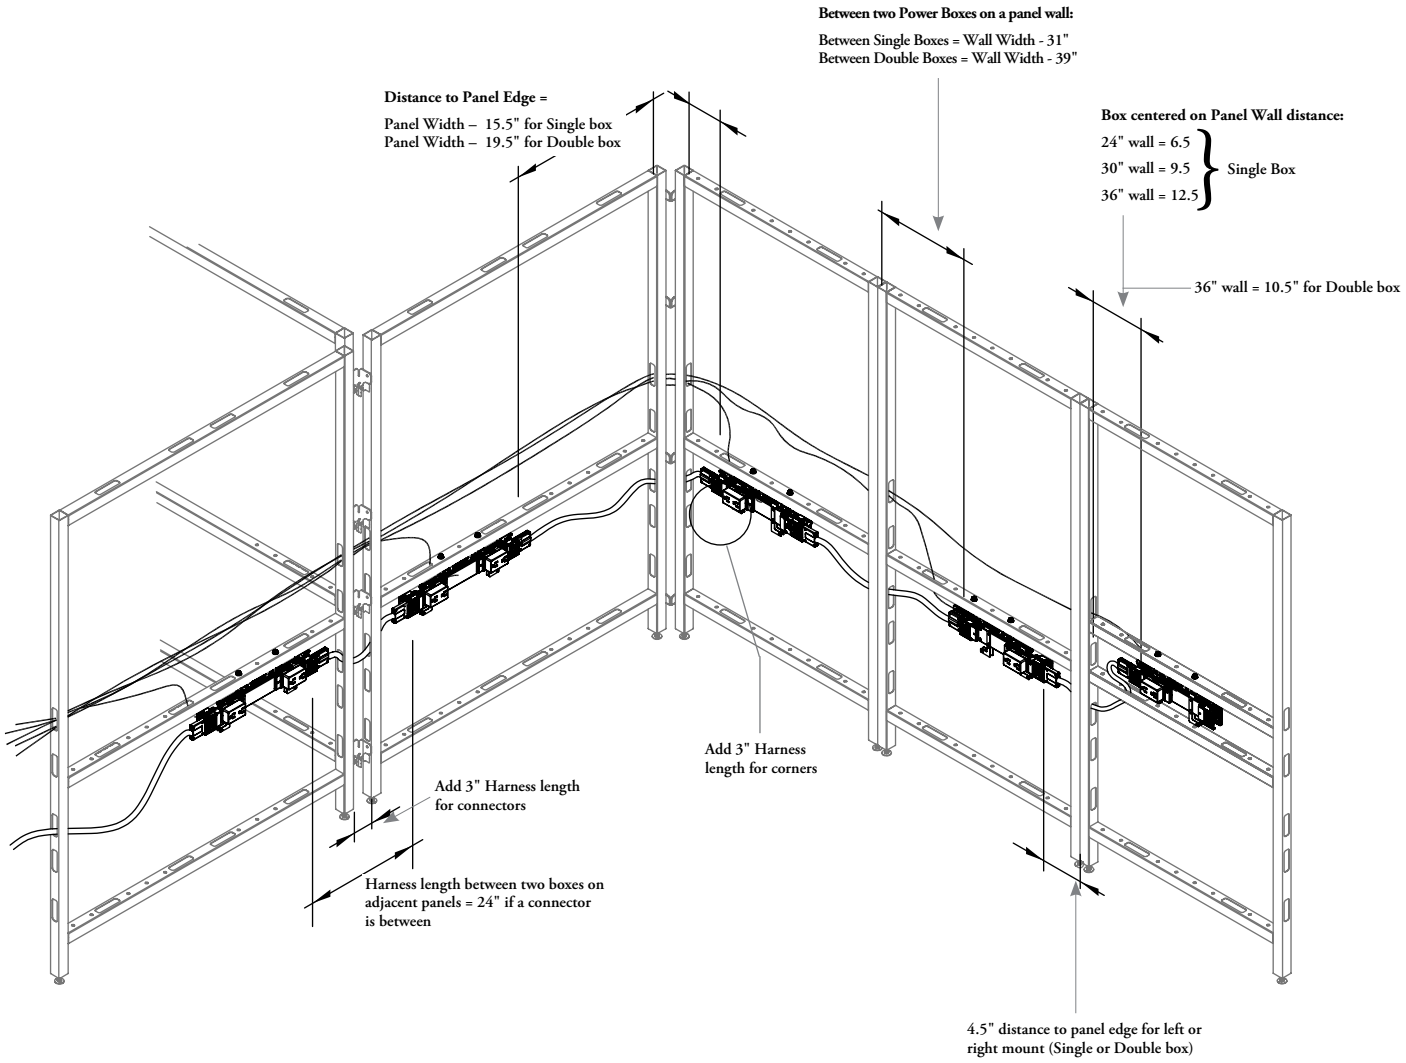

Power boxes allow for non-directional routing, so power can enter and exit from the same end of the power box. Up to four power harnesses can be used on one power box.

determining harness lengths

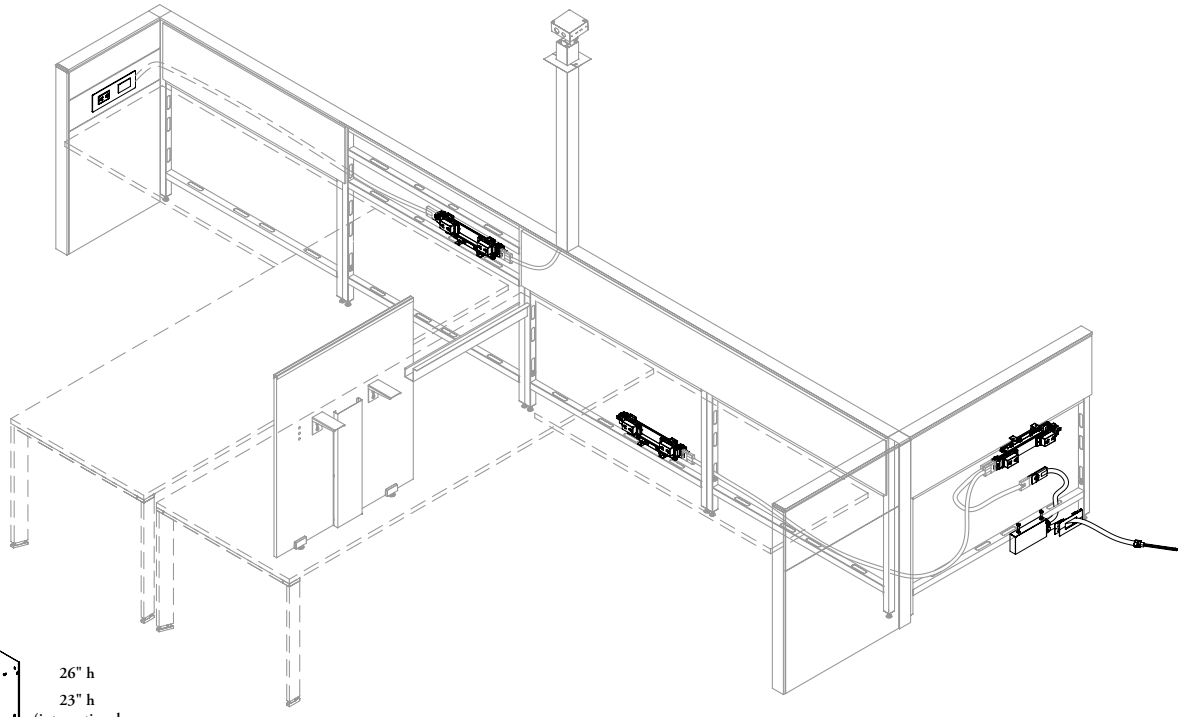

The following outlines the harness lengths required for connecting power boxes.

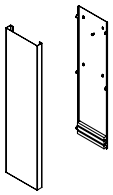

harness length requirements

casual electrics basics – panel-mounted workstations

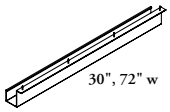

District offers options for adding casual power to worksurfaces, without the use of panels.

Vertical Cable Manager (UNVC)

- Used to conceal and route cables vertically below the desk
- Mounts to a floor screen or to storage
- Two heights to accommodate North American and International electrics
- The International version allows space to mount an International Outlet Box (VED)

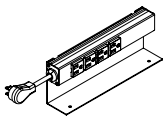

Cable Trough (UNQCT)

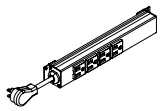

- An ABS cable trough is mounted below a worksurface to manage wires coming from the worksurface level on to Panel Wall electrics or floor monuments
- The 30" wide is the optimum size to fit between worksurface brackets

Grommets

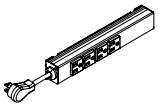

- Available as an option for worksurfaces, credenzas and elevated high credenzas
- Available from Complements: *Teknion's Ergonomics & Accessories Program*

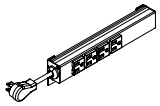

Desk Clamp with Self-Tapping Screws

Under-Worksurface Mount

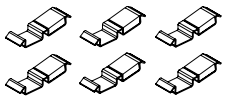

Lyft Base Mount

Accessories Element Mount

Power Bar (YEPD)

- Available from Complements: *Teknion's Ergonomics & Accessories Program*
- Attaches to a desk or the underside of a worksurface or to a modesty panel to provide casual power
- Does **not** include data capability

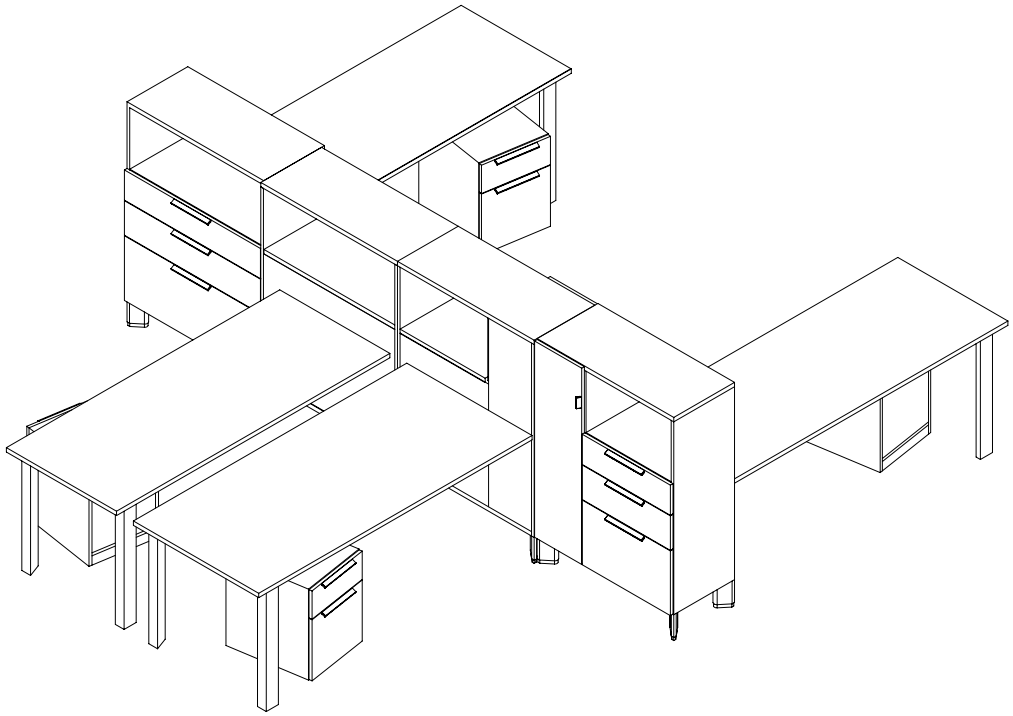

Worksurface Wire Clips (YESW)

- Available from Complements: *Teknion's Ergonomics & Accessories Program*
- Package of six undersurface cable clips that can be installed on the underside of a worksurface
- Provide two separate channels, one to run electrical and another to run communications cables
- The communications channel has a built-on soft sponge to protect the cables

storage electrics basics

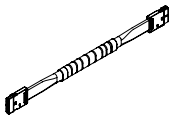

Power can be routed through elevated District storage to provide power to workstations with no panel walls.

Storage Base Feed (EWBF)

- Provides power from the floor to the underside of the storage cabinet and connects to harnesses
- Available in 72" and 144" lengths in 8T, 7T, 8K and 7K wiring systems

Storage Power Harness (EWBH)

- Carries power along the base of the cabinet to power and data box in the storage unit
- Available in lengths of 24", 48", 72", 120" and 144"
- 24" length is mesh, other sizes are a hybrid of mesh and metal conduit

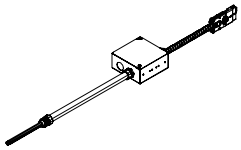

Storage Chicago Base Feed (EWBFCH)

- Same as the Base Feed (EWBF) except for Chicago electrics application
- Only the conduit is provided
- All wiring and connections must be supplied and connected by a certified electrician

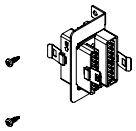

I-Connector (EWIC)

- Used to join two harnesses when a single harness length is **not** long enough

Storage Split Base Feed (EWBFS)

- Same as the Base Feed (EWBF) except it is hard wired to the building power supply in two places in New York wiring restrictions

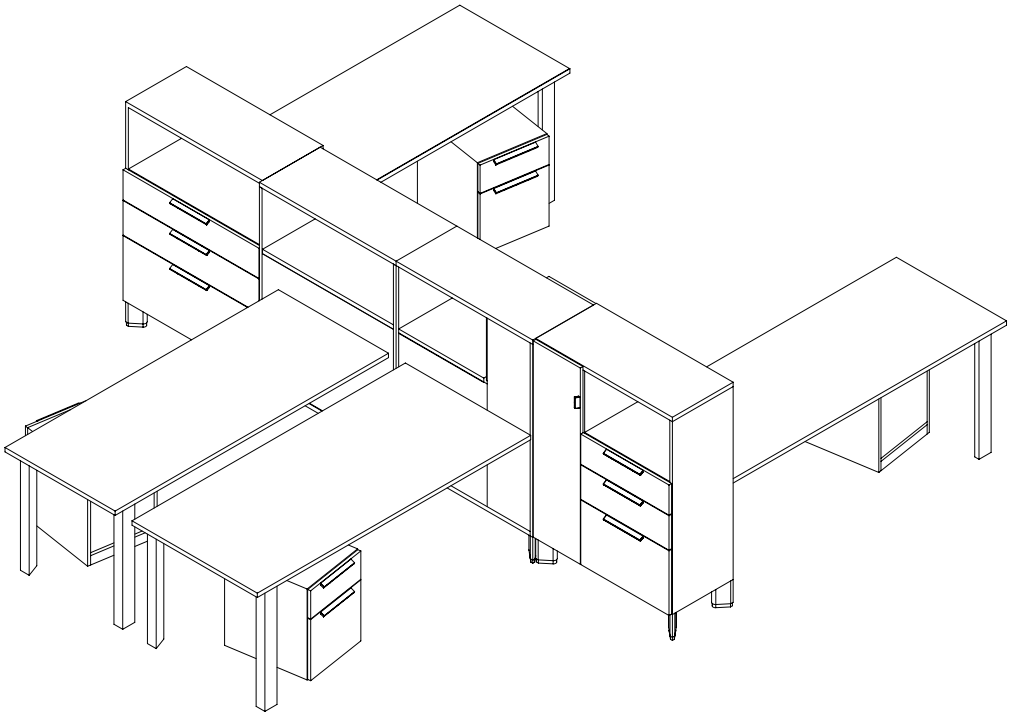

Four-Way Splitter (EWDB)

- Attaches to a harness to split power in four different directions

storage electrics basics (continued)

Power can be brought into the storage unit from the floor via a Base Feed or from the ceiling via a Power Pole Ceiling Feed. Build in feeds always route power and date to the underside of the elevated storage.

Storage Ceiling Feed (EWCF)

- Routes power to the underside of the storage cabinet from the ceiling through the storage power pole
- Can be directly connected to the Flush Mounted Power and Data (EWQP) unit once I-connector is removed

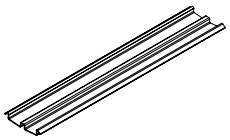

Storage Power Pole (EWEP)

- The Storage Power Pole (EWEP) can route power and data to two storage units.
- Houses the Storage Ceiling Feed and divides the ceiling feed from communication and data cables
- It is used to feed power and data to the underside of the storage units

Storage Chicago Ceiling Feed (EWCFCH)

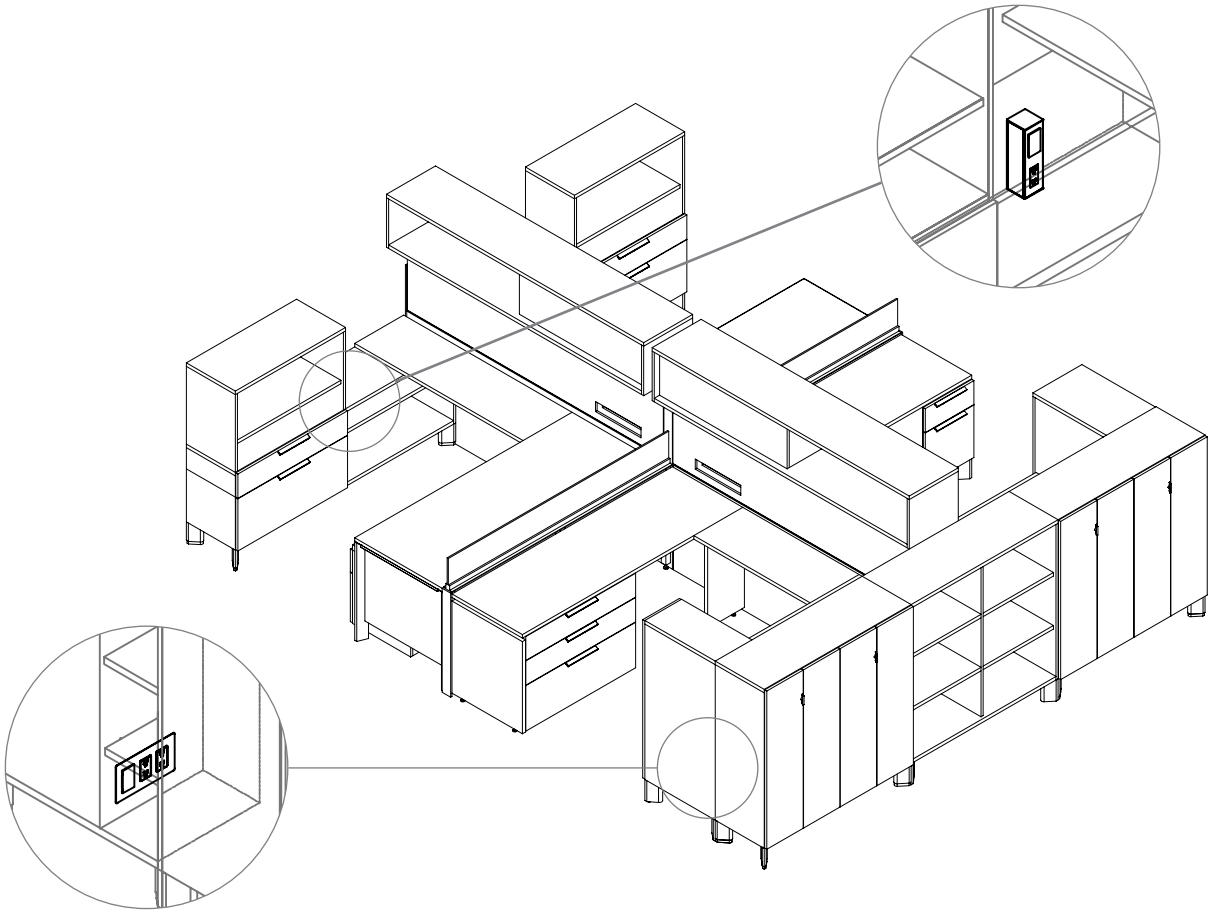

- Same as Storage Ceiling Feed (EWCF) except for Chicago electrics application
- The Storage Chicago Ceiling Feed (EWCFCH) comes with a 3-wire. No connector is found on the bottom end due to Chicago electrics wiring restrictions
- Chicago electrics wiring restrictions require that all wiring and connections be supplied and connected by a licensed electrician

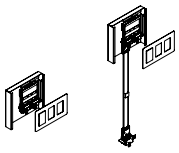

Under Cabinet Wire Tray (EWWT)

- A tray for managing wires below the storage cabinet
- Available in lengths of 12", 24", 36", 48", 60", 72" and 84"
- Tray **cannot** span across two storage units. Specify at least 12" less than the width of the cabinet onto which it is being mounted

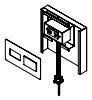

storage electrics basics (continued)

Flush Mount Power & Data (EWQP)

- A module for mounting receptacles (specified separately) to storage
- Mounts to the back of a storage cabinet at either base height or belt-line height
- Each unit supplies power and data access to user on opposite (backside) of cabinet

Chicago Flush-Mounted Power Box (EWQPCH)

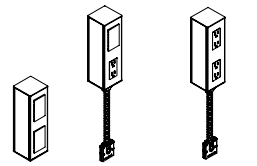

- Same as Flush Mount Power and Data (EWQP) except for Chicago electrics application
- Data and communications must be sourced separately
- Chicago electrics wiring restrictions require that all wiring and connections be supplied and connected by a licensed electrician

Storage Receptacles Outlet (EWRO)

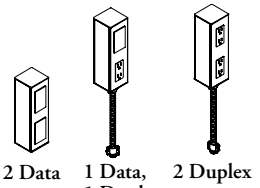

- A single duplex receptacle that mounts into the Flush Mount Power and Data (EWQP) unit to provide power
- Specified individually for maximum circuit flexibility
- Styles include Standard 15 amp, T-Slot 20 amp, Controlled 15 and 20 amp
- Outlet configurations consist of Circuit 1, Circuit 2, Circuit 3 (use 8T only), Circuit 5 (8T and 8K only), Circuit 6 (use 8K only), Circuit A (7T and 7K only), Circuit B (7K only)

2 Data **1 Data, 1 Duplex** **2 Duplex**

Cubby Power Monument (EWQPM)

- Provides access to power and data in open cubby sections of credenzas or the back cubby sections of pedestals and pedestal towers
- Cubby Power Monument must plug directly into a Four-Way Splitter (EWDB) or an I-Connector (EWIC). It plugs directly into a Storage Power Harness (EWBH).
- T-Slot 20 amp receptacle style is finished in Ebony

2 Data **1 Data, 1 Duplex** **2 Duplex**

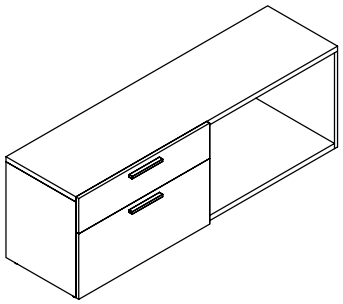

Chicago Cubby Power Monument (EWQPMCH)

- Same as Cubby Power Monument (EWQPM) except for Chicago electrics application
- T-Slot 20 amp receptacle style is finished in Ebony

planning with storage

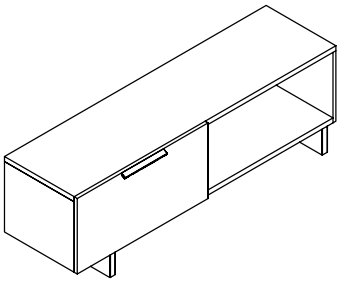

The following should be taken into consideration when planning with spine storage electrics.

electrical capability

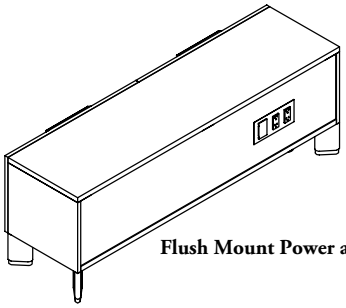

Standard, No Feet

- Standard storage has no electrics or cable management capabilities

Elevated, District Feet

- Elevated storage with District feet has no electrics or cable management capabilities

Flush Mount Power and Data (EWQP)

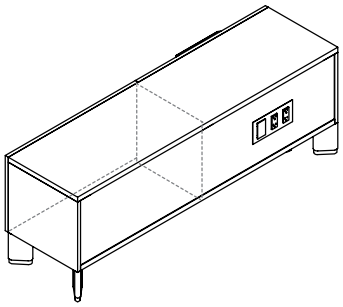

Elevated, Angled Feet

- Angled feet allow for a full electrified system by providing undersurface wire troughs and harnesses for routing power to Flush-Mounted Power and Data Boxes or the Cubby Power Monument
- Also grommets may be specified in the open cubby section for light cable management

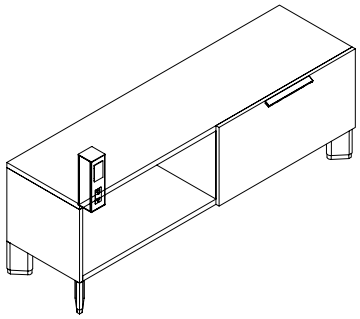

planning with storage (continued)

power locations

credenzas

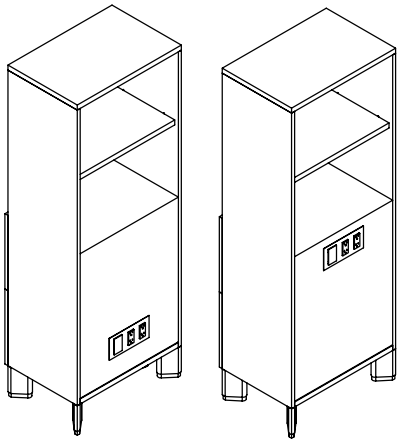

- Flush-Mounted Power and Data modules are always at base height, located behind the drawer when added to credenzas
- Base cut out must be specified when ordering the credenza

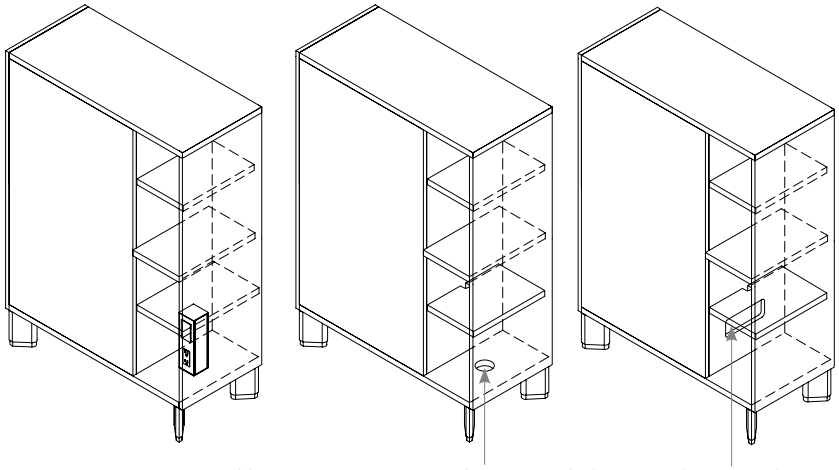

- **Cubby Power Monument (EWQPM)** can be located in the open cubby section of a credenza. It will fit into the grommet hole, therefore grommet must be selected when specifying the storage unit

towers and lockers

- For Lateral File, Lateral Tower or Combo Tower application, Flush Mounted Power and Data modules can be mounted at base or belt-line height
- Base or Belt-line back cut out must be specified when ordering the storage unit

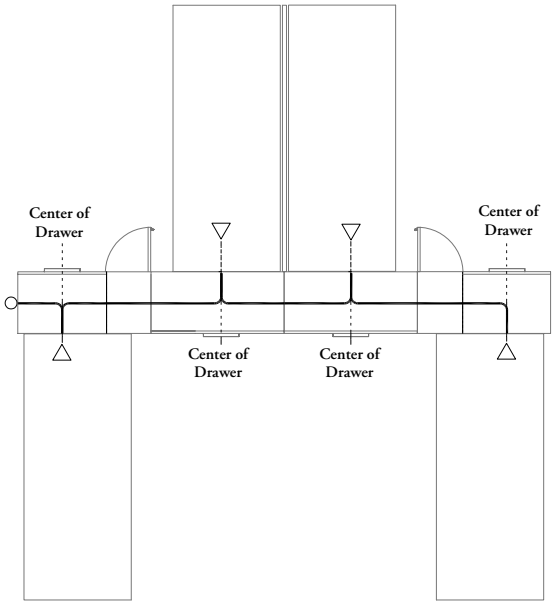

Cubby Power Monument can be mounted in grommet hole.

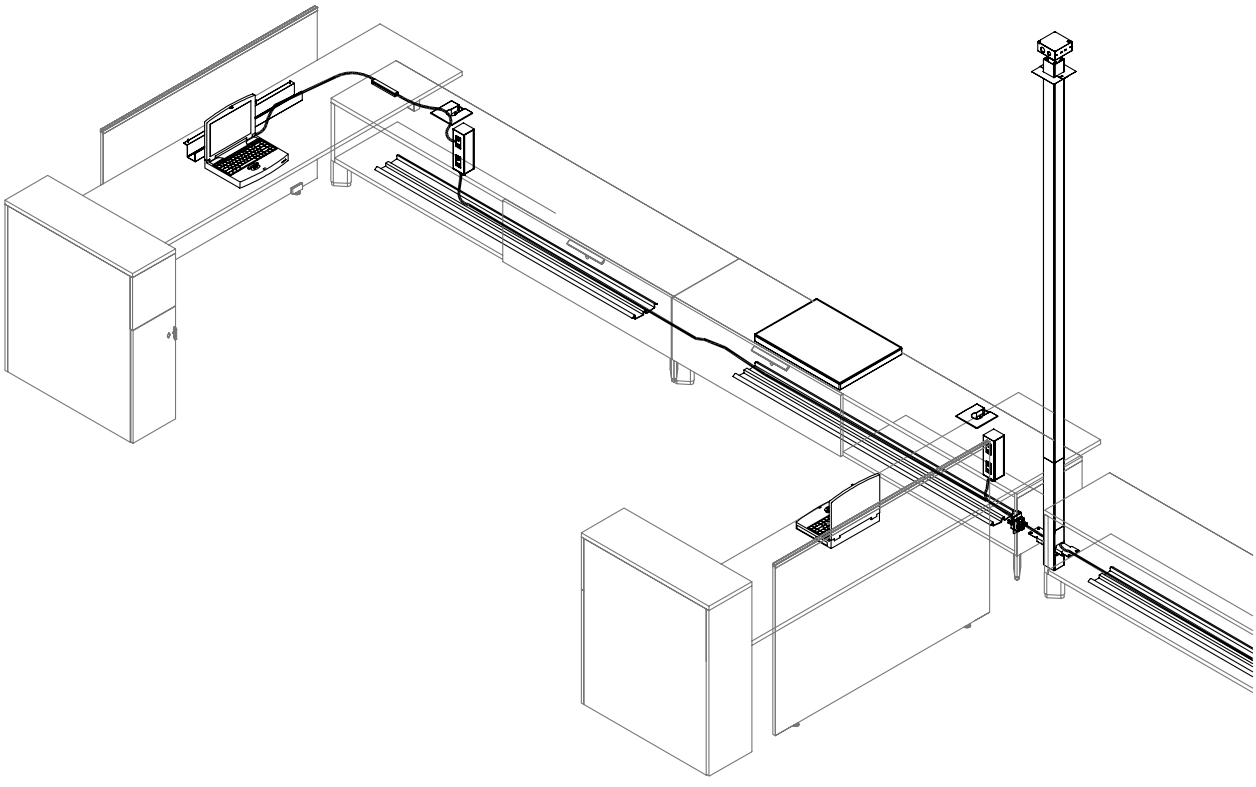

Flush-Mounted Power and Data unit can be mounted into base or belt back cut outs.

- For Single Lockers, Pedestal Towers or Pedestals with Cubby back, several options are available. Grommets can be used for casual power, or Flush-Mounted Power and Data units or Cubby Power Monuments may be used for multi-circuit power and data application

planning with storage (continued)

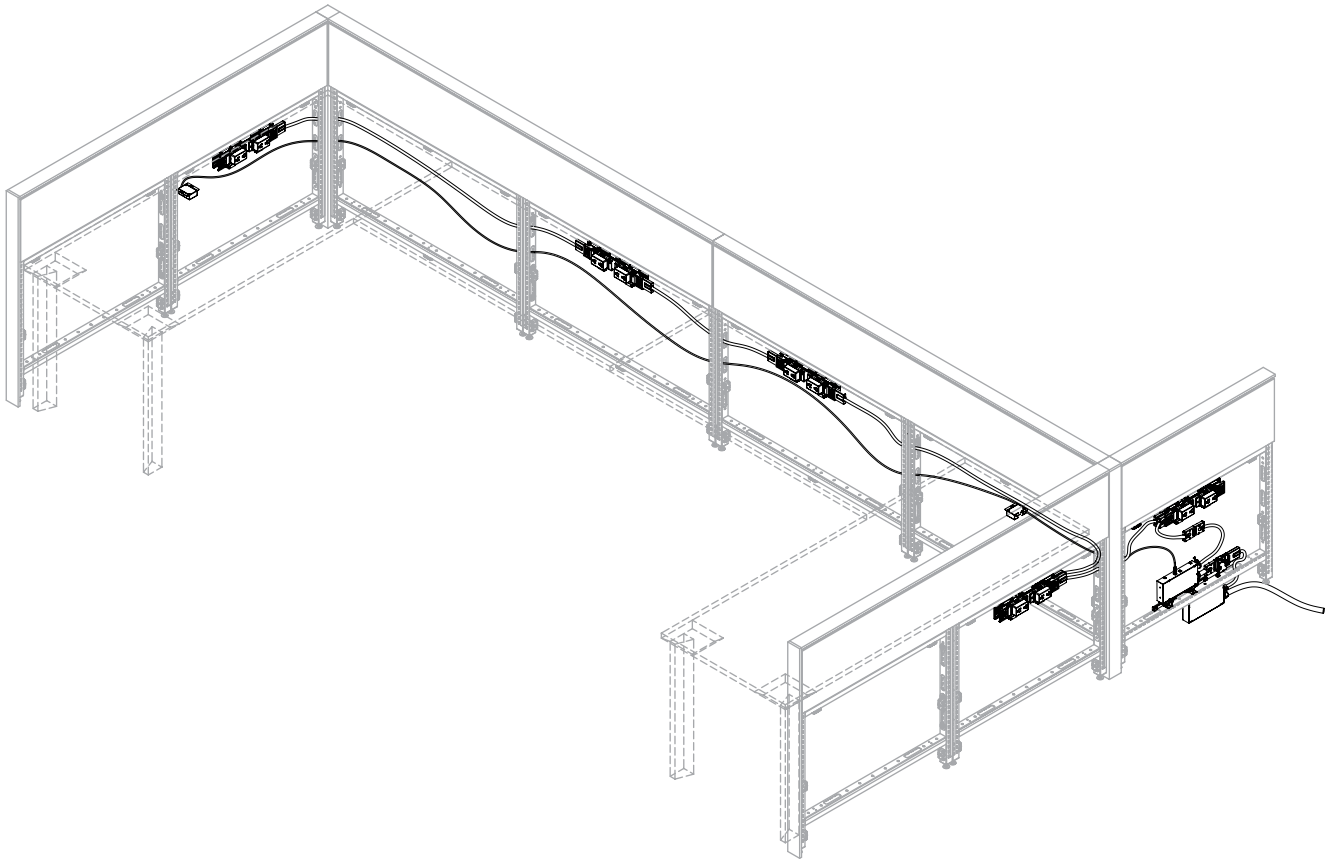

- Power does **not** have to be on one side only of a storage run – storage can be alternated to allow for maximum planning flexibility
- Flush-Mounted Power and Data (EWQP) module unit is always centered on the back of the drawer section of the unit
- To specify the correct lengths of power harness, determine the distance from the center of one cut out to the center of the next cut out, then add 24"
- Power outlets will be centered behind the filing section of a combo tower

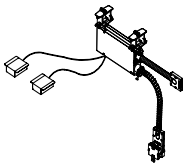

- When planning with a low storage unit in a freestanding environment, Cubby Power Monuments can be mounted into credenzas to provide multi-circuit power and data to the workstation
- Power can be routed from the building to the storage unit through Base or Ceiling Feeds then horizontally routed under the storage units along Under Cabinet Wire Trays
- Cubby Power Monuments must plug directly into a Four-Way Splitter (EWDB) or an I-Connector (EWIC). It **cannot** plug directly into a Storage Power Harness (EWBH).
- Power Poles can feed two storage units

power conservation system basics

Furniture based solution for the controlling function that addresses the ASHRAE/Title 24 electrical requirements.

Power Conservation System (UNQPC)

- Up to two circuits can be controlled by occupancy sensors (included)
- Maximum of four sensors can be connected to each individual controlled circuit
- When using the Power Conservation System, circuits 3, 5, 6, A and B will always stay powered on (uncontrolled)
- To get individually controlled stations, specify the Power Conservation System with two sensors
- Available with option of two, four or eight sensors (Maximum of four sensors per run)
- Sensors mount to the underside of the worksurface
- A hard wired connection supplies power into a panel from the building power source

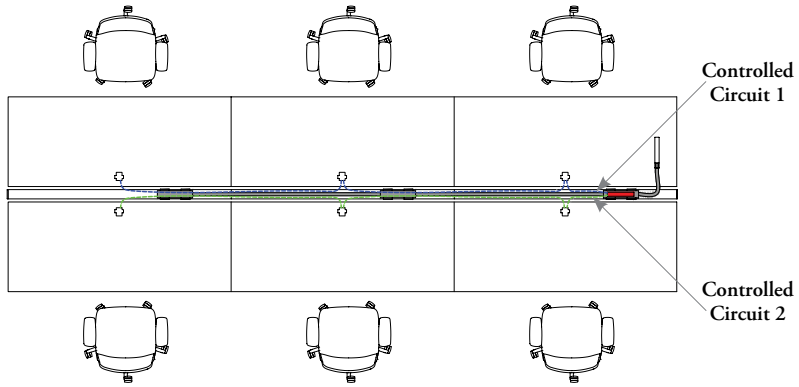

planning with power conservation system

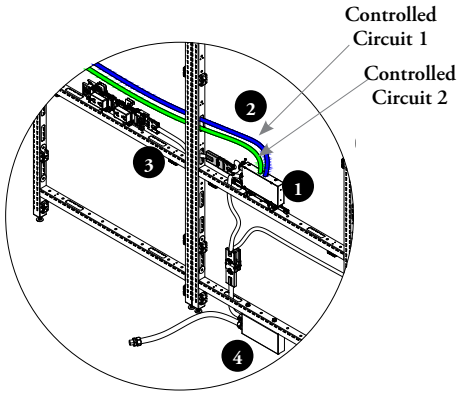

The following should be considered when planning with the Power Conservation System.

The following are two ways of planning with the Power Conservation System.

scenario A: Multiple sensor planning

The connection between two power modules only applies on the installation for four sensors and eight sensors.

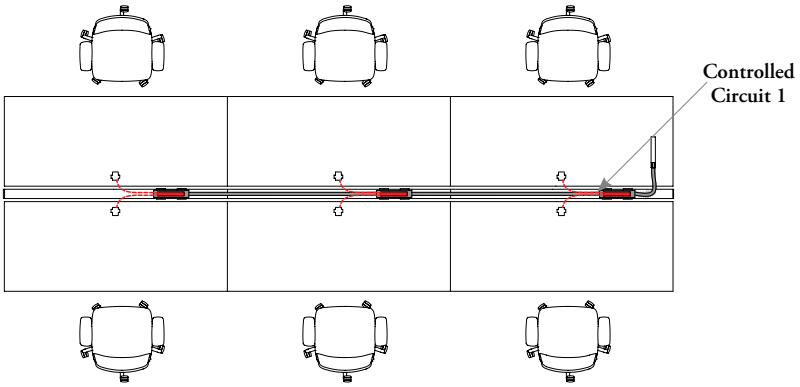

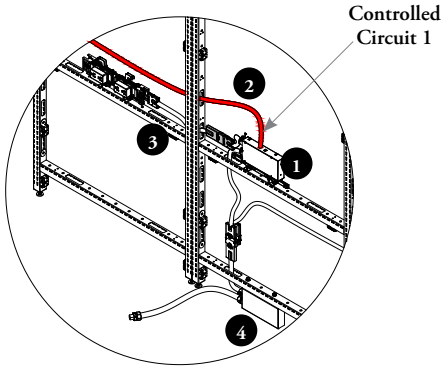

- Power Conservation Wiring
- Power Harness
- Control Box
- Sensor

1. Control Box
2. Power Conservation Wiring
3. Power Harness
4. Base Feed

scenario B: Single Sensor planning

- Power Conservation Wiring
- Power Harness
- Control Box
- Sensor

1. Control Box
2. Power Conservation Wiring
3. Power Harness
4. Base Feed

- Always specify one sensor per workstation
- Only one controlled circuit per workstation (do not specify two controlled circuits in one single workstation)
- Do not specify mix receptacles for both circuit 1 and 2 in a single workstation
- If the control box and power module are in the same panel, the output arm from the control box can directly connect to the power module, no extra jumper required

international electrics

international electrics

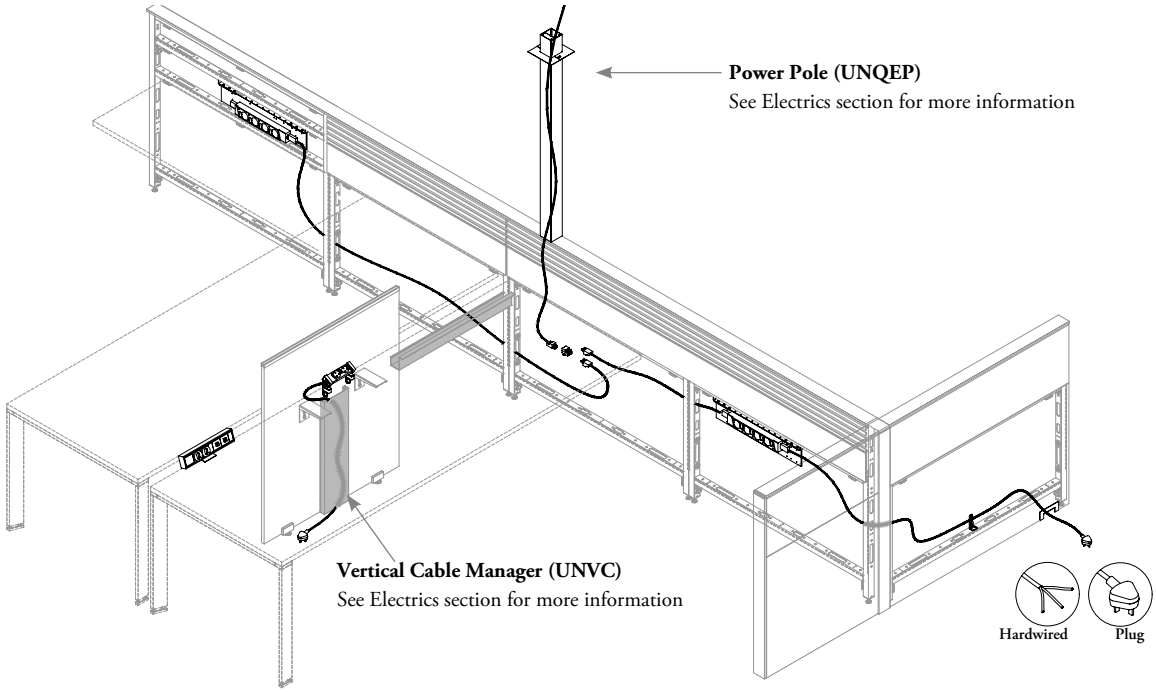

INTERNATIONAL ELECTRICS BASICS 277

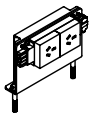

PLANNING WITH INTERNATIONAL ELECTRICS 281

international electrics basics

District is available with electrical components specific to District, including CALA electrics.

- International Electrics are a single circuit, 3 wire directional system
- Power outlet types are available for different regions and have options for fuses and switches

CALA Power Module (VBCD)

Provides access to power in CALA applications

-Includes the attachment bracket

Applications:

DA Double Duplex, One Sided

DB Double Duplex, Back to Back

SA Single Duplex, One Sided

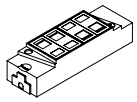

SB Single Duplex, Back to Back

Outlet Configurations

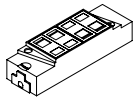

- Single Duplex
  003 Three Data
  200 Two Power
  120 One Power and One USB
- Double Duplex
  203 Two Power and Three Data
  400 Four Power
  320 Three Power and One USB

Country of Installation:

R Argentina
N Brazil
L Chile

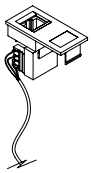

Four Shutters

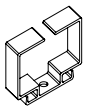

Four Blank Fascias

Voice & Data Box (VVD) and Voice & Data Box Outlets (VDO)

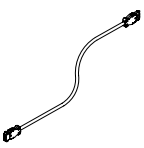

- The voice data box provides the user with access to communications and data cable
- Comes complete with blanks and shutters
- The data box outlets are inserted into the voice and data box
- Mounts to a Power Mounting Bracket (UNXB)

Screen Mounted Outlet Box Bracket (UNXSE)

- Used to casually mount an outlet box to a screen, a modesty panel, storage or underside of worksurface
- Used in combination with an Input Power Cable (VEP)

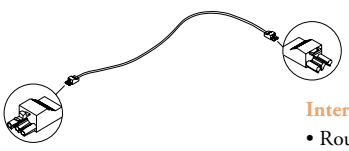

District CALA Jumper Power Harness (VBPH)

Routes power between CALA power modules

Length

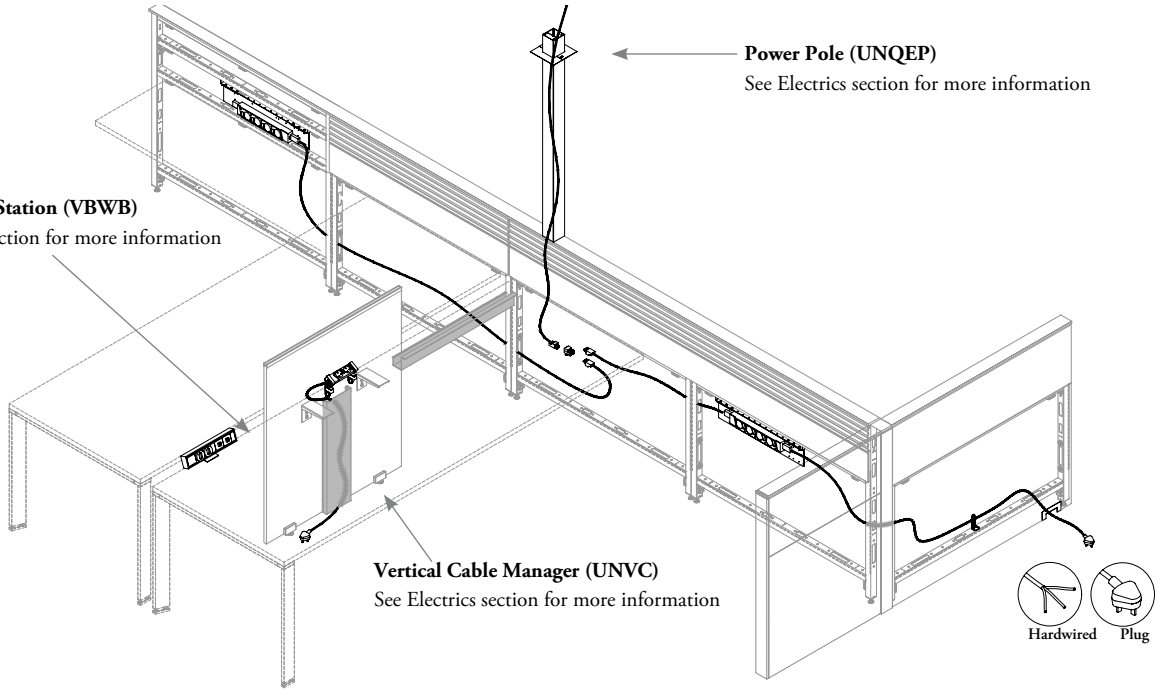

200 mm

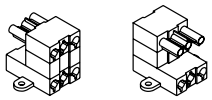

Interconnecting Power Cable (VCC)

- Routes power between outlet boxes or distribution block in panel and carries to next panel wall

international electrics basics (continued)

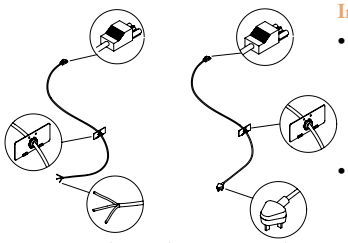

Distribution Block

Cover Cap

Distribution Block (VACEB) and Cover Cap (VACEC)

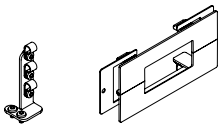

- The distribution box redirects power distribution in up to three directions
- Complete with one male connector (in) and three female connectors (out)
- Is placed inside panel wall without fasteners
- The Cover Cap is a safety cover for non utilized female terminals on an Outlet Box (VED) or Distribution Block (VAC EB)

Hard Wired Plug

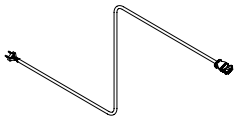

Input Power Cable (VEP)

- Brings power from the building or ceiling to either a panel wall where it is routed to an outlet box or to a desk where it is routed through wire managers to casually mounted power
- Available with two cable ends, hardwire or plug

Base Feed Mounting Kit (UNXPFR)

- Includes a strain relief bracket and a cover plate that is attached to the panel and conceals the opening where an Input Power Cable (VEP) or voice/data enters the panel wall

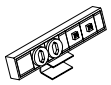

CALA Power In Feed (VBPD)

- Routes power from the building or ceiling in CALA applications

Length:
1800 mm

Country of Installation:
R Argentina
N Brazil
L Chile

CALA Power Station (VBWB)

Mounts to a worksurface to provide power

Outlet Configurations:

Double duplex
(202) Two Power and Two Data
(400) Four Power
(320) Three Power and One USB

Country of Installation:
R Argentina
N Brazil
L Chile

Cord Length:
1800 mm

Finishes

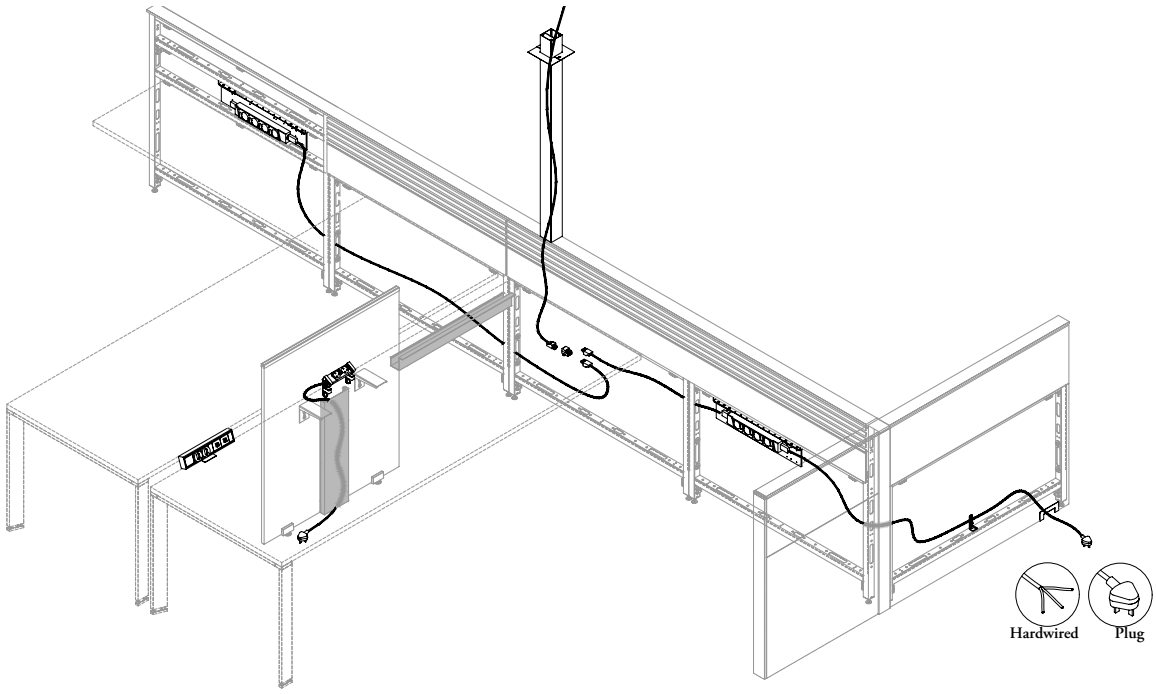

Receptacle Finish:
Ebony Coordinate
Very White Coordinate

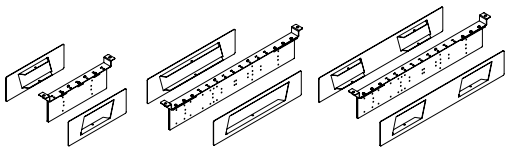

Clamp Finish:
Clear Anodized Aluminum

international electrics basics (continued)

District utilizes standard International Electric components, as well as District specific components

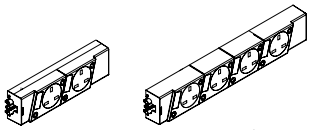

- International Electrics are a single circuit, 3 wire directional system
- Power outlet types are available for different regions and have options for fuses and switches

Panel Mount Outlet Box Bracket (UNXBR)

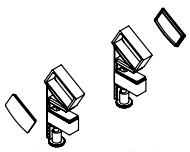

- Used to attach an Outlet Box (VED) and Voice & Data Box (VVD) to a panel wall
- Available in above and below worksurface versions
- Available for two outlets, for four outlets or for two outlets and a data box
- The same bracket allows for single or double-sided mounting of outlet brackets (specify fascias accordingly)
- Compatible with a standard or elevated panel
- A 1" gap along the worksurface and grommets permit component wire passage to outlets below the worksurface

Two Outlets Four Outlets

Outlet Box (VED)

- Provides access to power above and below worksurface
- Can be mounted onto a panel with a Power Mounting Bracket (UNXB) or to the edge of a worksurface, see Desk Mounting Clips (VACB6)
- Power outlets have a socket angle of 15˚
- Panel mounted access is below worksurface height at 25", flush with the panel wall face
- Faceplates are included with outlets and voice/data boxes
- The bottom of the faceplate aligns with the top of a low credenza
- Outlets are available; 2x power, 4x data or 4x power

Desk-Mounted Clips for Outlet Box

Desk Mounting Clips (VACB6)

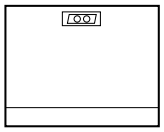

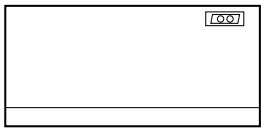

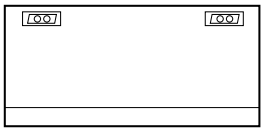

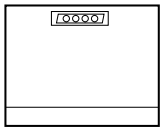

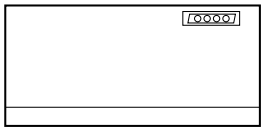

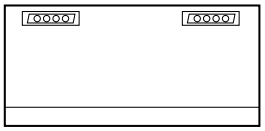

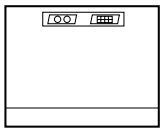

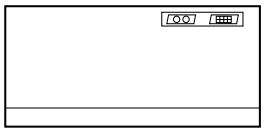

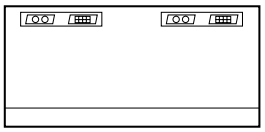

- Used to attach an Outlet Box (VED) or Voice & Data Box (VVD) to the edge of a worksurface
- Fits all sizes of Outlet Boxes (VED) or Voice & Data Boxes (VVD)

planning with international electrics

International power and data has some unique features that are not found in North American electrics. The examples below demonstrate this.

panel wall

• Outlet locations are located in panel wall centers or at panel edges according to size and fascia specifications

Outlet type:	Outlet location: Center	Left or Right Side	Left and Right Side
 2 x Power	 24" - 36"	 42" - 96"	 66" - 96"
 4 x Power	 36"	 42" - 96"	 66" - 96"
 2 x Power + 4x Data/Com	 36"	 42" - 96"	 66" - 96"

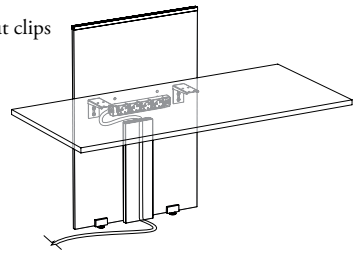

mounting to floor screens

• When outlets are mounted to floor screens, they are below worksurface height

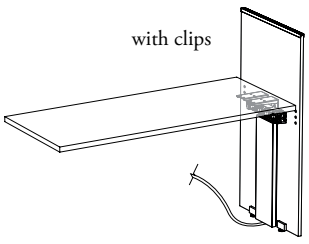

• Should be installed 2" below the surface, centered on the floor screen width where possible and **not** wider than a 4x power outlet box

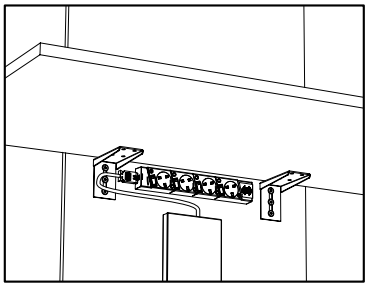

• They are attached with the Screen Mount Outlet Box Brackets (UNXSE) or with screws

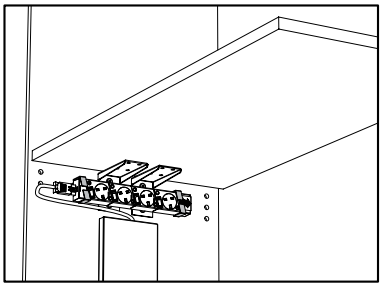

without clips

with clips

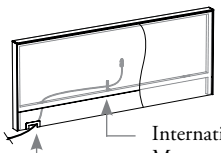

planning with international electrics (continued)

International power and data has some unique features that are not found in North American electrics. The examples below demonstrate this.

base feed

- The Input Power Cable (VEP) enters and is secured to a Base Feed Bracket (UNXPF) fastened to the panel wall rail (either standard or elevated)
- On flush panel walls entry is through a cut out to the fascia made on site and finished with the supplied cover plate
- On elevated panel walls the cable enters through an opening in the bottom of the panel wall frame
- Accepts one circuit per cable

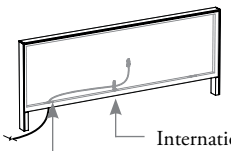

Flush Panel Wall

International Base Feed mounting bracket Max. capacity three power cables

Enter Input Power Cable VEP through fascia cutout and cover plate, locate cutout where desired. Voice/data cables can be accommodated in the same cutout

Elevated Panel Wall

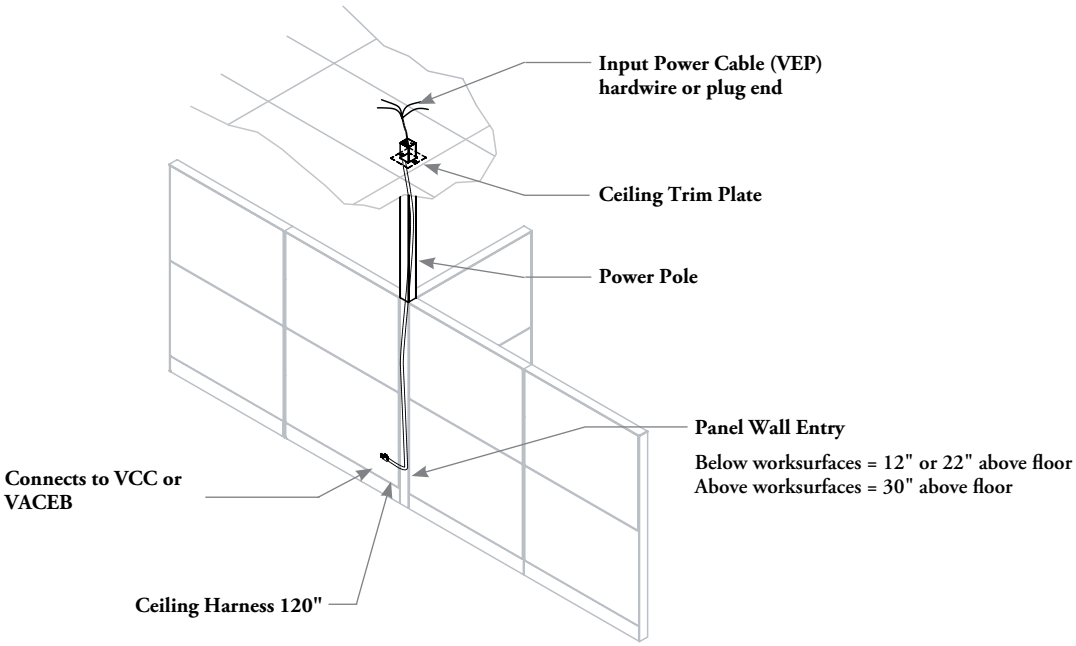

International Base Feed mounting bracket Max. capacity three power cables

Enter Input Power Cable VEP and voice/ data cables through bottom of the panel wall frame

ceiling feed

- Is available hard wired or with a plug for building connection
- The other end is a female connection
- Compatible with the Off-Module Power Pole and End of Run Power Pole (See Electrics section for more details)

Convertible Panel Wall with Inset

The Convertible Panel Wall with Inset is designed for Inset Blade add-ons and can be used in flush-to-the-floor applications or in elevated applications by adding the Convertible Panel Wall Base and Foot Trim (UNPCF).

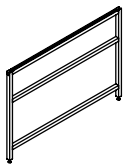

WHAT'S INCLUDED
1 frame (widths 24" - 60") or 2 frames (widths over 60"), hardware for straight connections, levelers.

WHAT'S EXCLUDED
Wall Base and Foot Trim (UNPCF) must be specified separately. Fascia applied must be specified separately, see *Fascia* section.

NOTES
Top trim must be specified (needed when window is applied to top of panel or requires a top trim cover when mounted storage or off-module glass is specified).

Panel wall frame has a Black finish.

Xpress Available through *Teknion's Xpress Program*.

PRODUCT OPTIONS

Height	Width (6" increments)	Fascia & Top Trim
29, 42, 51	24 - 96	To order finished panel walls, a Panel Matrix is available to identify placement of specific fascias and top trim.

Elevated Full-Height Window (D-Style) – Double Glass

The Elevated Full-Height Window – Double Glass provides uninterrupted vertical glass spans above the base rail.

WHAT'S INCLUDED
Structural frame, framed window insert, hardware for straight connections, base trim with hardware for attachment, top trim (if specified).

WHAT'S EXCLUDED
Elevated Panel Wall Foot (UNPEFR) must be ordered separately and can be found in this section.

NOTES
The 66" height is available up to 48" in width only.

Standard Glass is a clear tempered glass finish.

Standard Glass, Frost is a sandblasted tempered glass that is applied to one side of the window. Clear tempered glass will be applied on the opposite side of the window.

Specialty Glass Vanceva is a laminated glass that is applied to one side of the window. Clear tempered glass will be applied on the opposite side of the window.

U A E L M

Metal Fascia for Freestanding District (Slot Mount)

The Metal Fascia provides a metal panel wall finish.

WHAT'S INCLUDED
1 fascia and attachment hardware.

NOTES
Not all height/width combinations are available, 35" heights can be specified to a maximum of 60" width only. See pricing for exact offering.

Fascia is to only be applied to District Panel that is supported by the freestanding Foot (UAFFN).

The 22" fascia must be ordered with a 6" high fascia as Elevated panels are not applicable in a freestanding application.

Xpress Available through *Teknion's Xpress Program.*

Tackable Fabric Fascia for Freestanding District (Slot Mount)

The Tackable Fabric Fascia provides a tackable panel wall finish.

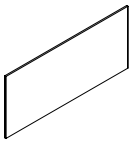

WHAT'S INCLUDED
1 fascia with cut out as specified, fascia connectors.

NOTES
Not all height/width combinations are available. See pricing for exact offering.

Fascia is to only be applied to District Panel that is supported by the Freestanding Foot (UAFFN).

The 22" and 35" fascias must be ordered with a 6" high fascia as Elevated panels are not applicable in a freestanding application.

Xpress Available through *Teknion's Xpress Program.*

U A E C L

Solid Power/Communications Fascia for Freestanding District (Clip Mount)

The Solid Power/Communications Fascia provides face-mounted access to power/communications.

WHAT'S INCLUDED
1 fascia with cut out as specified, fascia connectors.

NOTES
Not all height/width combinations are available. See pricing for exact offering.

Fascia is to only be applied to District Panel that is supported by the Freestanding Foot (UAFFN).

The 22" fascia must be ordered with a 6" high fascia as Elevated panels are not applicable in a freestanding application.

For 36" to 60" wide fascias only Left (LL) or Right (RR) power and data locations can be specified.

Xpress Fascia finish Flintwood and Natural Veneer are excluded from *Teknion's Xpress Program*.

U A E I L

Solid International Power/ Communications Fascia for Freestanding District (Clip Mount)

The Solid International Power/Communications Fascia provides face-mounted access to power/communications.

WHAT'S INCLUDED
1 fascia with cut out as specified, fascia connectors.

NOTES
Not all height/width combinations are available. See pricing for exact offering.

Fascia is to only be applied to District Panel that is supported by the Freestanding Foot (UAFFN).

The 21" and 22" fascias must be ordered with a 6" high fascia as Elevated panels are not applicable in a freestanding application.

For 36" to 60" wide fascias only Left (LL) or Right (RR) power and data locations can be specified.

Xpress Fascia finish Flintwood and Natural Veneer are excluded from *Teknion's Xpress Program*.

U N E L C M

Metal Power/Communications Fascia (Slot Mount)

The Metal Power/Communications Fascia provides face-mounted access to power/communications above or below worksurface height.

WHAT'S INCLUDED
1 fascia with cut out as specified.

WHAT'S EXCLUDED
Fascia Light Block (UNEX) is required for additional segmentation and must be specified separately. Can be found in the *Panel Walls* section.

NOTES
37" high fascia can be specified to a maximum of 60" width only.

Xpress Available through *Teknion's Xpress Program.*

PRODUCT OPTIONS

Outlet Configuration	Horizontal Power/Communications Orientation	Vertical Power/Communications Orientation	Height	Width (6" increments)	Fascia Finish
2 One duplex outlet plus VDM (available on 24" and 30" widths) **4** Two duplex outlets plus VDM (available on 36" widths and wider)	**B** Left and Right (available on 66" width and wider for one and two duplex outlets) **C** Centered (available on 36" width for two duplex outlets and on 24", 30", 36" widths for one duplex outlet) **L** Left (not available on widths below 42") **R** Right (not available on widths below 42") **E** Left Center (available on 66" widths or higher for both one and two duplex options) **F** Right Center (available on 66" widths or higher for both one and two duplex options) **D** Centered Left and Right (available on 66" widths or higher for both one and two duplex options)	**B** Bottom or Lower section of Fascia (available on 7", 13", 22", 26", 35", 37" heights) **F** Flush (applies to 28" height only for base fascias flush to floor. Cut out will be at bottom) **T** Top or Upper section of Fascia (available on 13", 22", 28" heights)	07, 13, 22, 26, 28, 35, 37	24 - 96	Foundation Mica

U A E L C M

Metal Power/Communications Fascia for Freestanding District (Slot Mount)

The Metal Power/Communications Fascia (Slot Mount) provides face-mounted access to power/communications.

WHAT'S INCLUDED
1 fascia with cut out as specified, fascia connectors.

NOTES
Not all height/width combinations are available. 35" high fascia can be specified to a maximum of 60" width only. See pricing for exact offering.

Fascia is to only be applied to District Panel that is supported by the Freestanding Foot (UAFFN).

The 22" fascia must be ordered with a 6" high fascia as Elevated panels are not applicable in a freestanding application.

For 36" to 60" wide fascias only Left (LL) or Right (RR) power and data locations can be specified.

Xpress Available through *Teknion's Xpress Program.*

U A E L I M

Metal International Power/ Communications Fascia for Freestanding District (Slot Mount)

The Metal International Power/Communications Fascia provides face-mounted access to power/communications.

WHAT'S INCLUDED
1 fascia with Cut Out as specified, fascia connectors.

NOTES
Not all height/width combinations are available. 35" high fascia can be specified to a maximum of 60" width only. See pricing for exact offering.

Fascia is to only be applied to District Panel that is supported by the Freestanding Foot (UAFFN).

The 21" and 22" fascias must be ordered with a 6" high fascia as Elevated panels are not applicable in a freestanding application.

For 36" to 60" wide fascias only Left (LL) or Right (RR) power and data locations can be specified.

Xpress Available through *Teknion's Xpress Program.*

U N E L C F

Tackable Fabric Power/ Communications Fascia (Slot Mount)

The Tackable Fabric Power/Communications Fascia provides face-mounted access to power/communications above or below worksurface height.

WHAT'S INCLUDED
1 fascia.

WHAT'S EXCLUDED
Fascia Light Block (UNEX) is required for additional segmentation and must be specified separately. Can be found in the *Panel Walls* section.

NOTES
7" high fascia is **not** tackable.

Xpress Available through *Teknion's Xpress Program.*

PRODUCT OPTIONS

Outlet Configuration	Horizontal Power/Communications Orientation	Vertical Power/Communications Orientation	Height	Width (6" increments)	Fascia Finish
2 One duplex outlet plus VDM (available on 24" and 30" widths) **4** Two duplex outlets plus VDM (available on 36" widths and wider)	**L** Left (not available on widths below 42") **R** Right (not available on widths below 42") **B** Both Left and Right (available on 66" width and wider for one and two duplex outlets) **C** Centered (available on 36" width for two duplex outlets and on 24", 30", 36" widths for one duplex outlet) **E** Left Center (available on 66" widths or higher for both one and two duplex options) **F** Right Center (available on 66" widths or higher for both one and two duplex options) **D** Centered Left and Right (available on 66" widths or higher for both one and two duplex options)	**B** Bottom or Lower section of Fascia (available on 7", 13", 22", 26", 35", 37" heights) **F** Flush (applies to 28", 41" height only for base fascias flush to floor. Cut out will be at bottom) **T** Top or Upper section of Fascia (available on 13", 22", 28" heights)	07, 13, 22, 26, 28, 35, 37, 41	24 - 96	Panel Fabric

U A E L C F

Tackable Fabric Power/ Communications Fascia for Freestanding District (Slot Mount)

The Tackable Fabric Power/Communications Fascia provides a tackable panel wall finish.

WHAT'S INCLUDED
1 fascia.

NOTES
Fascia is to only be applied to District Panel that is supported by the Freestanding Foot (UAFFN).

The 22" fascia must be ordered with a 6" high fascia as Elevated panels are not applicable in a freestanding application.

For 36" to 60" wide fascias only Left (LL) or Right (RR) power and data locations can be specified.

Xpress Available through *Teknion's Xpress Program.*

Tackable Fabric International Power/Communications Fascia for Freestanding District (Slot Mount)

The Tackable International Fabric Power/Communications Fascia provides a tackable panel wall finish.

WHAT'S INCLUDED
1 fascia.

NOTES
7" height fascias are not tackable.

Fascia is to only be applied to District Panel that is supported by the Freestanding Foot (UAFFN).

The 21" and 22" fascias must be ordered with a 6" high fascia as Elevated panels are not applicable in a freestanding application.

For 24" to 60" wide fascias only Left (LL) or Right (RR) power and data locations can be specified.

Xpress Available through *Teknion's Xpress Program.*

U Z P K

Power Spine Support Kit

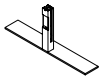

The Power Spine Support Kit is paired with the Power Spine or Power Spine Inset panel (UNPZ or UYPZ) to create a District Power Spine

WHAT'S INCLUDED
See below.

WHAT'S EXCLUDED
Power Spine or Power Spine Inset panel (UNPZ or UYPZ), Fascia, End Trim and Top Trim to Panel must be specified separately.

NOTES
Support Kit only can be combined with the Power Spine specific panel type (UNPZ & UYPZ). Combined height with Power Spine panel (UNPZ or UYPZ) is 29" or 42" from the finished floor to the top of the finished worksurface with a leveling range of 3".

Xpress Available through *Teknion's Xpress Program.*

G X C D
Infinity Curved Desk Edge Screen

The Infinity Curved Desk Edge Screen attaches to the worksurface on both on the back and lateral edge to provide a lightweight, thin, upholstered fabric screen that is expressed in a softer curvilinear aesthetic that creates space division and local desktop privacy in varying levels.

WHAT'S INCLUDED
1 infinity fabric desk edge screen, attachment brackets, wire manger (if specified).

NOTES
The screen depth is 20" with a 1/2" wire gap around the screen.

Screen is designed to accompany the District Rectangle with Radius Corners Worksurface (UNWC).

Wire manger is designed to be accompanied by the Power Bar (YEPD) or Compact Power Bar (YEPS).

Fabric will be applied in the railroad direction in select Panel and Upholstery fabrics, refer to the *Teknion Textiles Program Guide*.

Xpress Available through *Teknion's Xpress Program.*

PRODUCT OPTIONS

Modesty Base Height	Height	Depth	Width	Orientation	Screen Finish	Hardware Finish
S Partial Modesty Height (23")	**42** for 42" datum height	20	24, 30, 36, 42, 48, 54, 60	**NL** Left	Panel Fabrics	Foundation

Xpress

G X D D
Infinity Desk Edge Screen

The Infinity Desk Edge Screen attaches to a worksurface to provide a lightweight, thin, upholstered fabric screen that is expressed in a softer curvilinear aesthetic that creates space division and local desktop privacy in varying levels.

WHAT'S INCLUDED
1 infinity fabric desk edge screen, attachment brackets, wire manger (if specified).

NOTES
Infinity screen is 1/2" less than specified size. The worksurface wire gap is 1/2", to allow for mounting of select desk edge accessories.

Wire manger is designed to be accompanied by the Power Bar (YEPD) or Compact Power Bar (YEPS).

Fabric will be applied in the railroad direction in select Panel and Upholstery fabrics, Refer to the *Teknion Textiles Program Guide*.

Xpress Available through *Teknion's Xpress Program.*

PRODUCT OPTIONS

GQDD
Quilted Infinity Desk Edge Screen

Pico Pattern, Front

Diode Pattern, Back

The Quilted fabrics provide a textured aesthetic, elevating the overall feel of an area creating a tactile user experience. Both the Teknion Quilted patterns Pico and Diode, designed by Suzanne Tick, soften the surface of textiles and elevate the user experience in the workplace with textured, quilted designs that add depth and perspective to a space. The Quilted Infinity Desk Edge Screen attaches to a worksurface to provide a lightweight, thin, upholstered fabric screen that is expressed in a softer curvilinear aesthetic that creates space division and local desktop privacy in varying levels.

WHAT'S INCLUDED

1 quilted infinity fabric desk edge screen, attachment brackets, wire manger (if specified).

NOTES

Infinity screen is 1/2" less than specified size. The worksurface wire gap is 1/2", to allow for mounting of select desk edge accessories.

Wire manger is designed to be accompanied by the Power Bar (YEPD) or Compact Power Bar (YEPS).

Fabric will be applied in the railroad direction in select Panel and Upholstery fabrics, refer to the *Teknion Textiles Program Guide*. The pattern thread is designed to accompany the color way of the fabric selected.

G X S D
Infinity Side Desk Edge Screen

The Infinity Side Desk Edge Screen attaches to a worksurface to provide a lightweight, thin, upholstered fabric screen that is expressed in a softer curvilinear aesthetic that creates space division and lateral desktop privacy in varying levels.

WHAT'S INCLUDED
1 infinity side desk edge screen, attachment brackets.

NOTES
Infinity side screen is 1/2" less than specified size. Screen is designed to have no gap between worksurface and Side Screen.

Fabric will be applied in the railroad direction in select Panel and Upholstery fabrics, refer to the *Teknion Textiles Program Guide*.

Xpress Available through *Teknion's Xpress Program.*

G X F D
Infinity Desk Edge Floor Screen

The Infinity Desk Edge Floor Screen attaches to a worksurface to provide a lightweight, thin, upholstered fabric screen that is expressed in a softer curvilinear aesthetic that creates space division and local desktop privacy down to the floor level.

WHAT'S INCLUDED
1 infinity desk edge floor screen, attachment brackets, wire manger (if specified).

NOTES
Infinity Floor screen is 1/2" less than specified size. The worksurface wire gap is 1/2", to allow for mounting of select desk edge accessories.

Wire manger is designed to be accompanied by the Power Bar (YEPD) or Compact Power Bar (YEPS).

The screen is available in select Panel and Upholstery fabrics, refer to the *Teknion Textiles Program Guide*.

U Z S S
Lateral Floor Screen Solid

Solid Lateral Floor Screen attaches to a District or Power Spine Panel to provide casual lateral space division.

WHAT'S INCLUDED
1 lateral solid screen, attachment brackets.

NOTES
Screens 48" in width and above will include a support foot.

Support foot and bracket finish can be specified separately.

The Bracket location is determined by the location of the bracket in relation to the screen.

Worksurface Connection is not panel supporting. The left handed orientation will have the visible mounting brackets on the right and the support foot (if required) will be on the left. The right handed orientation will have the visible mounting brackets on the left and the support foot (if required) will be on the right.

If Bracket Attachment End Mounted Single or Double (ES/EB) or Mid Spine (MS) is selected for depths 48" and above with No Screen Support (N) an Anchor for Height-Adjustable Table (UZAS) or Bracket for Height-Adjustable Table (UZBS) needs to be ordered separately.

Xpress Screen finish Flintwood and Natural Veneer are excluded from *Teknion's Xpress Program.*

U Z R G

Lateral Floor Screen with Glass, with Return

Solid Lateral Screen with Glass top and return attaches to a District or Power Spine Panel to provide casual lateral space division.

WHAT'S INCLUDED
1 lateral solid screen with glass and return, attachment brackets.

NOTES
Support foot and trim default to the same finish. The bracket finish can be specified separately.

The Bracket location is determined by the location of the bracket in relation to the screen. The left handed orientation will have the visible mounting brackets on the right and the return will be on the left. The right handed orientation will have the visible mounting brackets on the left and the return will be on the right.

Inset specific option (D, E, F, H) are designed to line up with the glass add-on in a complete Inset panel.

Bracket Attachments (ES) and (EB) are not available with Heights (G), (K), (M) and (N).

U Z R S

Lateral Floor Screen with Solid, with Return

Solid Lateral Floor Screen with return attaches to a District or Power Spine Panel to provide casual lateral space division.

WHAT'S INCLUDED
1 lateral solid screen with return, attachment brackets.

NOTES
Support foot and bracket finish can be specified separately.

If heights 51" or 57" is selected, only Source Laminate is available.

The Bracket location is determined by the location of the bracket in relation to the screen. The left handed orientation will have the visible mounting brackets on the right and the return will be on the left. The right handed orientation will have the visible mounting brackets on the left and the return will be on the right.

U Z C G

Lateral Floor Screen with Glass, with Shared Return

Solid Lateral Screen with Glass top and shared return attaches to a District or Power Spine Panel to provide casual lateral space division.

WHAT'S INCLUDED

1 lateral solid screen with glass and shared return, attachment brackets.

NOTES

Support foot and trim default to the same finish. The bracket finish can be specified separately.

The Bracket location is determined by the location of the bracket in relation to the screen. The left handed orientation will have the visible mounting brackets on the right and the shared return will be on the left. The right handed orientation will have the visible mounting brackets on the left and the shared return will be on the right.

Inset specific option (D, E, F, H) are designed to line up with the glass add-on in a complete Inset panel.

UZCS

Lateral Floor Screen with Solid, with Shared Return

Solid Lateral Floor Screen with shared return that attaches to a District or Power Spine Panel to provide casual lateral space division.

WHAT'S INCLUDED
1 lateral solid screen with shared return, attachment brackets.

NOTES
Support foot and bracket finish can be specified separately.

The Bracket location is determined by the location of the bracket in relation to the screen. The left handed orientation will have the visible mounting brackets on the right and the shared return will be on the left. The right handed orientation will have the visible mounting brackets on the left and the shared return will be on the right.

Rectangle with Radius Corners Worksurface

The Rectangle with Radius Corners Worksurface provides a range of depths to support both primary and secondary worksurface applications.

WHAT'S INCLUDED
1 worksurface, grommet (if specified).

NOTES
Worksurface is designed to accompany the District Infinity Curved Desk Edge Screen (GXCD).

Actual depth is 1" less than nominal depth to allow for a cable management gap at the back and to align with storage.

Actual width equals nominal width, allowance for gaps at side edges must be specified.

Xpress Worksurface Finish Flintwood and Natural Veneer, Edge Trim Style Flat with Flintwood and Natural Veneer (9) and Full Knife (H) are excluded from *Teknion's Xpress Program*.

Navigate Freestanding Table, Base Only

One Table
One Plug

Navigate Freestanding Table Base Only to be used with Freestanding Table Rectangular Height-Adjustable Worksurface to create a Freestanding District specific height-adjustable table.

WHAT'S INCLUDED
1 Height-Adjustable base, leg and foot configuration as specified.

NOTES
Electric base mechanism has 0.1 Watt resting power draw and uses 120V North American control box.

Vertical Wire Carrier includes cross channel bracket and mounts into credenza.

The height-adjustable worksurface must be specified separately.

For Switch details, see the *Application Guide* section.

Cross Channel Integrated Powerbar option (C) includes 3 outlets + 1 IEC Connection. This IEC connection accepts only one IEC-compatible power accessory (with an IEC cord terminal) at a time.

Undersurface cable management option (5) - Dual Plastic Trays + Powerbar with IEC refers to a Power Rod (with IEC cord terminal) that must be plugged into the IEC connection of the Cross Channel Integrated Powerbar option (C).

For more information about the One Table One Plug electrical system, IEC-compatible power accessories and planning with IEC Connection, refer to Complements: *Teknion's Ergonomics & Accessories Program*.

Xpress Available through *Teknion's Xpress Program.*

Navigate Height-Adjustable Built-in Gable Base - Parallel Planning

One Table
One Plug

Navigate Height-Adjustable Built-in Gable Base - Parallel Planning is to be paired with Parallel Rectangular Height-Adjustable Built-in Worksurface, Gable, to create a District specific gable leg integrated height-adjustable table supporting parallel planning.

WHAT'S INCLUDED
1 Height-Adjustable base, leg and foot configuration as specified.

NOTES
Electric base mechanism has 0.1 Watt resting power draw and uses 120V North American control box.

Vertical Wire Carrier includes cross channel bracket and mounts into credenza.

The height-adjustable worksurface must be specified separately.

For Switch details, see the *Application Guide* section.

Cross Channel Integrated Powerbar option (C) includes 3 outlets + 1 IEC Connection. This IEC connection accepts only one IEC-compatible power accessory (with an IEC cord terminal) at a time.

Undersurface cable management option (5) - Dual Plastic Trays + Powerbar with IEC refers to a Power Rod (with IEC cord terminal) that must be plugged into the IEC connection of the Cross Channel Integrated Powerbar option (C).

For more information about the One Table One Plug electrical system, IEC-compatible power accessories and planning with IEC Connection, refer to Complements: *Teknion's Ergonomics & Accessories Program*.

Xpress Water Fall Finish Flintwood and Natural Veneer are excluded from *Teknion's Xpress Program.*

Parallel Corridor Credenza for Height-Adjustable Table

The Parallel Corridor Credenza for Height-Adjustable Table is installed parallel to the corridor to allow for perpendicular planning with the worksurface.

WHAT'S INCLUDED

1 case, box/file drawers with pulls (as specified), lock and keys (if specified), counterweight, leg grommet.

File with Hinged Door (H) has an extra kit that contains two 1-1/4" levelers and two 1-3/4" levelers will be shipped with the storage.

WHAT'S EXCLUDED

A Seat Cushion (UWLC) or Fitted Seated Cushion(UWLF) can be ordered separately and can be found in the *Accessories* section.

NOTES

Full Drawer (F) includes extended levelers (UNSXLB) already installed.

Hinged door is push latch, no handle required.

48" and 54" Widths are not available if configuration (H) File with Hinged Door is specified.

The following bases can be installed into this credenza:
Navigate Height-Adjustable Built-in Base - Parallel Planning (YHD)
Navigate Height-Adjustable Built-in Gable Base - Parallel Planning (YWD)
hiSpace HA Built-in Base - Perpendicular Planning (YSG)
hiSpace HA Built-in Base - Parallel Planning (YSP)

Xpress Case, Back & Front Finish Flintwood and Natural Veneer are excluded from *Teknion's Xpress Program.*

End Gable

With Infill No Infill

The End Gable provides end of run worksurface support. Available open or with infill options.

WHAT'S INCLUDED
1 leg and support with or without infill (as specified), one worksurface support bracket, leveler, attachment hardware.

NOTES
Handedness is determined by the user when seated at the adjoining worksurface (right handed shown).

Height dimension includes worksurface.

Bottom of infill option is 6" above floor level.

Not compatible with 28" Fascia (see Supports section in Application Guide).

Brackets will be finished to match the frame finish. A Platinum paint is applied to brackets when an Anodized frame finish is specified.

Xpress Available through *Teknion's Xpress Program.*

Lateral Tower Infill

Solid Tackboard Whiteboard

The Lateral Tower Infill mounts to the open through Lateral Tower with Cubby to enclose the back of the storage unit.

WHAT'S INCLUDED
Infill, attachment hardware.

NOTES
Type (Elevated or Standard), height and width should be specified according to the size of the cabinet.

When the Outside finish is Source Laminate, Flintwood or Natural Veneer, the Inside finish will match the outside.

When the Outside finish is fabric, the Inside finish will be painted.

When the Outside finish is a whiteboard, the Inside finish can be Source Laminate, Flintwood or Natural Veneer.

Actual size of storage infill relates to opening and will vary depending on type and size of storage unit.

Infill for 36" high Elevated is **not** available.

This Infill **cannot** be used on Combo Tower with a Source Laminate Case.

Xpress Outside/Inside Finish Flintwood and Natural Veneer are excluded from *Teknion's Xpress Program.*

UTCXIS
Combo Tower Infill

Solid Tackboard Whiteboard

The Combo Tower Infill mounts to the open through Combo Tower with Cubby to enclose the back of the storage unit.

WHAT'S INCLUDED
Infill, attachment hardware.

NOTES
Type (Elevated or Standard), height and width should be specified according to the size of the cabinet.

When the Outside finish is Source Laminate, Flintwood or Natural Veneer, the Inside finish will match the outside.

When the Outside finish is fabric, the Inside finish will be painted.

When the Outside finish is a whiteboard, the Inside finish can be Source Laminate, Flintwood or Natural Veneer.

Cannot be used on Combo Tower with Source Laminate Case. See Source Laminate Tower Infill (UTCXIX).

UNQEPR
End of Run Power Pole

The End of Run Power Pole houses the ceiling feed end of panel run entry points. A pole divider for separating the ceiling feed from communications and data cables is provided.

WHAT'S INCLUDED
1 base power pole, 1 upper power pole, ceiling plates, mounting hardware, ceiling trim plate.

NOTES
42" high base is for Panel Walls 42" - 66" and provides above and below worksurface power entry.

29" high base is for 29" high Panel Walls or when only below worksurface power entry is required.

Xpress Available through *Teknion's Xpress Program.*

Power Conservation System

Power Conservation system provides an automatically turn off to items like task lights, monitors, personal heaters and fans and other non-essential user equipment when they are not in use.

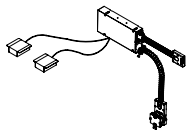

WHAT'S INCLUDED
Power conservation system consists of a control box, selected number of sensors, system connection brackets, connecting cables and a four-way splitter.

NOTES
Timer is set for 20 minutes for automatic shut-off after area is unoccupied. System sensors are available in Black only. Sensor connection wires are available in Grey and White only. System control box is available in Platinum (Foundation) only. Each Control Box offers two separate output jack for connection of Occupancy Sensors. The first output jack controls power to all receptacles on Teknion Circuit 1 and the second output jack controls power to all receptacles on Teknion Circuit 2. Each of the output jacks is labeled on the control box.

Do not specify receptacles for circuits 1 and 2 at the same workstation when using Power Conservation System.

Each occupancy sensor can only control one circuit.

VAC
Electric Accessories

The Distribution Block redirects power distribution. The Cover Cap is a safety cover for Outlet Boxes and Distribution Blocks. The Desk-Mounting Clips attach an Outlet Box to a desk or worksurface.

WHAT'S INCLUDED
1 distribution block or one Cover Cap or 1 pair of Desk-Mounting Clips for Outlet Box.

WHAT'S EXCLUDED
Outlet Box (VED) and all Interconnecting Power Cables (VCC) and Input Power Cables (VEP) must specified separately.

NOTES
The Distribution Block has one male connector that directs power in and three female connectors that direct power out.
