

# around synchro-tilt task chair & stool overview

The Around Chair, designed by Justus Kolberg, is a task chair and swivel stool collection that achieves two different looks with either an upholstered or mesh back, framed by a sleek sculptural form.

The concealed innovations optimize function and comfort

It offers a distinctive design expression and an opportunity to vary the aesthetic with the product line.

It is available with a mesh or fabric back and fully assembled or not fully assembled.

## around synchro-tilt task chair & stool adjustment features & instructions

### reclining tension override

While the weight-balancing mechanism automatically adjusts the tilt-tension to each user, an override grip is located below the seat on the right hand side to enable modification to suit user preference. To fine tune the tilt tension, simply rotate the grip forward to tighten and backwards to loosen.

### tilt-lock and limiter

Turning the grip found under the left side of the seat backwards limits the back tilt travel and locks the back when it's rotated fully forward. Travel is limited on 4 positions with back lock in the upright position.

### arm width, depth and pivot adjustment

To adjust the width of the 2D and 4D arms, grab the arm pad on both sides and push to the left or to the right to the desired position.

For the 4D arm option, simultaneously pivot the arm pad inward or outward to the desired angle. Arm pad depth can be controlled by grabbing the pad and sliding it forward or backward.

### arm height-adjustment

To adjust the height-adjustable arm height, press the button below either arm rest to raise or lower it to the desired position.

### seat height-adjustment

Seat height can be adjusted by pulling up on the lever below the seat on the right hand side. When this lever is pulled, the weight of the body will cause the seat to lower, and releasing it stops the seat at the desired height. Pulling up on the lever with no weight on the seat allows it to rise.

## around synchro-tilt task chair & stool adjustment features & instructions (continued)

### lumbar support height-adjustment (upholstered)

While sitting in the chair, put arms behind back to grab each individual lumbar control knob, slide each element up or down to match your physical requirements, even for asymmetrical positioning.

### lumbar support height-adjustment (mesh)

While sitting in the chair, put arms behind back to grab the lumbar control knobs on both sides of lumbar element, slide lumbar up or down to match your physical requirements.

### seat depth adjustment

To adjust the seat depth, pull outward on the lever below the seat on the left-hand side and simultaneously lift your weight from the seat while sliding the seat forward. Seat depth reduction is assisted by a spring-loaded motion. For either direction, release button to lock the seat in place.

### footring adjustment (stool)

To raise or lower the stool's foot ring, turn the foot ring's knob counter-clockwise to release the foot ring and adjust the ring until you reach desired level. Turn the knob clockwise to lock in place.
