modus bob

features

Offered in partnership with Modus in South Somerset, UK, the Modus Bob cork stool is low carbon; renewable; biodegradable; recyclable and naturally sound absorbent. Warm and tactile, as envisioned by designer Michael Sodeau, Bob is made entirely from waste materials generated during the production of wine bottle corks, so it is both eco-friendly and functional. Modus Bob features a natural cork finish that feels soft to the touch, a curved base with a concave seat, and iconic holes that make it easy to move while adding a distinctive design element.

sustainability

Modus Bob is made entirely from recycled waste materials generated during the production of wine bottle corks, uses a solvent-free binder and is available with responsibly sourced wood upon request. Once Modus Bob reaches the end of its life cycle, it can be recycled into a finer grade cork composite ready for life as a new product or biodegraded.

Cork is a renewable material harvested from the outer bark of the Mediterranean cork oak tree without harm to the tree. The bark will regenerate and is typically harvested once a decade. As it regenerates, it can absorb up to five times more CO_2 than a cork tree left undisturbed. Mediterranean cork forests help sequester an estimated 14 million tons of carbon annually.

Cork oak forests are rich in biodiversity, and these trees can live up to 250 years. The cork harvesting process supports communities in southern Europe and northern Africa and is highly sustainable, positively impacting the natural environment.

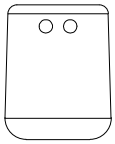
Bob is available in one configuration.



Steps involved in specifying Bob stools	Example:
Select Bob stool	**SMBOB**
Select the configuration	SMBOB**001**
Select the cork finish	SMBOB001**MNC**

weights

Modus Bob Stool	16 1/2 lbs

care instructions

Cork should be regularly cleaned with a soft cloth or duster. Stains should be tackled immediately with warm, soapy water, working from circumference to center and rubbing gently. Repeat as necessary.

All cork items are sensitive to UV and will fade if left exposed to sunlight. Turn regularly to avoid bleach lines.
